Educational Program Evaluation 8686, 10542, 10723, 10755, 10803, 10819, 10830, 10974, 11004, 11107, 11108, 11109, 11110
Educational Program Planning 8686, 10623, 10723, 10791, 10828, 10983
Educational Programs [See Also Project Head Start] 10621, 10626, 10632, 10639, 10645, 10701, 10706, 10734, 10744, 10745, 10769, 10770, 10775, 10778, 10788, 10805, 10821, 10827, 10828, 10829, 10830, 10976, 11018
Educational Psychologists [See School Psychologists]
Educational Psychology [See Also School Psychology] 10629, 10634, 10759
EEG (Electrophysiology) [See Electroencephalography]
Efficiency (Employee) [See Employee Efficiency]
Effort [See Energy Expenditure]
Ego 9481, 9509, 9750, 9821, 9832, 9835, 9852, 9874, 9885, 10178, 10241, 10423, 10436, 10503
Egocentrism [See Egotism]
Egotism 9488, 9505
Ejaculation [See Male Orgasm]
Elavil [See Amitriptyline]
Elective Abortion [See Induced Abortion]
Electrical Activity [See Also Alpha Rhythm, Auditory Evoked Potentials, Cortical Evoked Potentials, Delta Rhythm, Evoked Potentials, Somatosensory Evoked Potentials, Theta Rhythm, Visual Evoked Potentials] 8608, 9089, 9092, 9112, 9114, 9116, 9122, 9124, 9125, 9139, 9140, 9141, 9186, 9194, 9212, 9219, 9278
Electrical Brain Stimulation 9183, 9194, 9199, 9200, 9201, 9202, 9203, 9205, 9207, 9208, 9209, 9210, 9211, 9212, 9214, 9215, 9216, 9218, 9219, 9278
Electrical Stimulation [See Also Electrical Brain Stimulation, Electroconvulsive Shock] 8784, 9212
Electroconvulsive Shock [See Also Electroconvulsive Shock Therapy] 9206, 9213
Electroconvulsive Shock Therapy 9204, 10174, 10175, 10176, 10181, 10186
Electrodermal Response [See Galvanic Skin Response]
Electroencephalography 8859, 9088, 9094, 9100, 9105, 9106, 9108, 9119, 9132, 9141, 9144, 9145, 9157, 9171, 9182, 9207, 9248, 9267, 9357, 10089, 10120, 10135, 10147, 10336, 10353, 10398
Electrolytes 9035, 9299
Electromyography 9128, 9141, 10129, 10327, 10328
Electrophysiology [See Also Alpha Rhythm, Auditory Evoked Potentials, Cortical Evoked Potentials, Delta Rhythm, Electrical Activity, Electrical Brain Stimulation, Electroencephalography, Electromyography, Evoked Potentials]

BRIEF SUBJECT INDEX

- tials, Galvanic Skin Response, Skin Potential, Skin Resistance, Somatosensory Evoked Potentials, Theta Rhythm, Visual Evoked Potentials] 9096, 9099, 9183
- Electroshock Therapy** [See Electroconvulsive Shock Therapy]
- Elementary Education** 10622, 10831
- Elementary School Students** 10662, 10675, 10725, 10729, 10735, 10736, 10739, 10756, 10764, 10765, 10771, 10776, 10777, 10780, 10782, 10783, 10798, 10800, 10805, 10809, 10810, 10812, 10818, 10819, 10820, 10822, 10825, 10827, 10831, 10832, 10833, 10837, 10839, 10842, 10846, 10847, 10848, 10849, 10850, 10853, 10854, 10857, 10858, 10859, 10861, 10863, 10865, 10866, 10867, 10868, 10869, 10871, 10872, 10873, 10874, 10875, 10877, 10880, 10882, 10884, 10886, 10888, 10892, 10897, 10905, 10909, 10910, 10914, 10922, 10924, 10933, 10934, 10941, 10942, 10945, 10946, 10947, 10951, 10953, 10965, 10967, 10980, 10982, 11003, 11004, 11008, 11011, 11016, 11020, 11021, 11024, 11035, 11037, 11039, 11043, 11044, 11049, 11050, 11052, 11053, 11079
- Elementary School Teachers** 8646, 10651, 10659, 10661, 10662, 10666, 10675, 10686, 10690, 10707, 10719, 10720, 10832, 10847, 10886, 10897, 10902, 10914, 10924, 10933, 11013, 11049, 11050
- Elementary Schools** 10635
- Emetic Drugs** [See Also Apomorphine] 10551
- EMG (Electrophysiology)** [See Electromyography]
- Emotional Adjustment** [See Also Coping Behavior, Identity Crisis] 9560, 9561, 9600, 9617, 9618, 9632, 9826, 10154, 10182, 10451, 10938, 10963
- Emotional Content** 8992, 9814, 10853
- Emotional Control** [See Coping Behavior]
- Emotional Development** 9487, 9964, 10727
- Emotional Disorders** [See Mental Disorders]
- Emotional Instability** 9979
- Emotional Maladjustment** [See Emotional Adjustment]
- Emotional Maturity** 9379, 10018
- Emotional Responses** [See Also Conditioned Emotional Responses] 8973, 9007, 9027, 9045, 9176, 9301, 9335, 9589, 9608, 9811, 9816, 9821, 9964, 10250, 10253, 10431, 10446, 11106
- Emotional Stability** 9904
- Emotional States** [See Also Alienation, Ambivalence, Boredom, Depression (Emotion), Distress, Emotional Trauma, Euphoria, Fear, Involutional Depression, Neurotic Depressive Reaction, Pessimism, Pleasure, Psychotic Depressive Reaction] 8713, 8825, 8991, 9006, 9094, 9141, 9179, 9698, 9762, 9772, 9784, 9797, 9821, 9827, 9854, 9859, 9936, 9997, 10564
- Emotional Trauma** 10105
- Emotionality (Personality)** 8704
- Emotionally Disturbed** [See Also Autistic Children] 8636, 8651, 10259, 10382, 10521, 10965, 10968, 10980, 10990, 10993, 10995
- Emotions** [See Also Related Terms] 8623, 9379, 9533, 9684, 10114, 10426
- Empathy** 8640, 9477, 10225, 10304, 10530, 10564, 10568, 10570, 10573, 10581, 10614, 10617, 10675
- Empirical Methods** [See Also Observation Methods] 8609, 8671
- Employee Attitudes** [See Also Job Satisfaction] 11063, 11102, 11134, 11138, 11145, 11146, 11148, 11160, 11168, 11169, 11178, 11183
- Employee Benefits** [See Also Salaries] 11161, 11164
- Employee Efficiency** 11065
- Employee Motivation** 10698, 10954, 11063, 11100, 11120, 11128, 11145, 11151, 11154, 11156, 11167, 11168, 11172, 11174, 11178
- Employee Performance Appraisal** [See Job Performance, Personnel Evaluation]
- Employee Productivity** 11119, 11125, 11134, 11143, 11167
- Employee Selection** [See Personnel Selection]
- Employee Skills** [See Also Clerical Secretarial Skills] 11128
- Employee Turnover** 11161, 11179
- Employees** [See Personnel]
- Employment** [See Occupations]
- Employment Interviews** [See Job Applicant Interviews]
- Employment Processes** [See Personnel Recruitment]
- Employment Tests** 11092
- Encephalography** [See Electroencephalography]
- Encopresis** [See Fecal Incontinence]
- Encounter Group Therapy** [See Also Marathon Group Therapy] 10300, 10308, 10311
- Encounter Groups** [See Sensitivity Training]
- Endocrine Disorders** [See Diabetes, Premenstrual Tension, Turners Syndrome]
- Endocrine Gland Surgery** [See Male Castration, Ovariectomy]
- Endocrine Glands** 10451
- Endocrine Sexual Disorders** [See Premenstrual Tension, Turners Syndrome]
- Endocrine System** [See Endocrine Glands]
- Energy Expenditure** 8712, 9854, 10574, 11013
- Engineers** 11148, 11154
- England** 9978, 10038
- English (Nonstandard)** [See Nonstandard English]
- English Language** [See Language]
- Enhancement (Drugs)** [See Drug Potentiation]
- Enjoyment** [See Pleasure]
- Enlistment (Military)** [See Military Enlistment]
- Enrollment (School)** [See School Enrollment]
- Entrance Examinations** 11026
- Enuresis** [See Urinary Incontinence]
- Environment** [See Also Animal Environments, Classroom Environment, College Environment, Communes, Communities, Home Environment, Kibbutz, Poverty Areas, Rural Environments, School Environment, Social Environments, Suburban Environments, Urban Environments, Working Conditions] 8576, 9587, 9812, 9995, 11173, 11197
- Environmental Adaptation** 10479
- Environmental Effects** [See Also Altitude Effects, Atmospheric Conditions, Cold Effects, Noise Effects, Temperature Effects] 9012, 10358, 11194
- Environmental Stress** 9914, 9991
- Enzymes** [See Also Monoamine Oxidases] 10139
- Epidemiology** 9978, 9996, 10038, 10110, 10456
- Epilepsy** [See Also Epileptic Seizures] 9216, 10089, 10101, 10111, 10346, 10353
- Epileptic Seizures** 9314, 9315, 10089, 10135, 10336, 10353
- Epinephrine** 9269, 9275, 9298
- Epithelium** [See Skin (Anatomy)]
- Equality (Social)** [See Social Equality]
- Equilibrium** 8743
- Equipment** [See Apparatus]
- Ergonomics** [See Human Factors Engineering]
- Error Analysis** 8690
- Errors** [See Also Prediction Errors] 8624, 8626, 8714, 8815, 8868, 8875, 10600
- Erythrocytes** 10408
- Escape** [See Avoidance]
- Escape Conditioning** 9010, 9118, 9721
- Eskimos** 10779
- ESP (Parapsychology)** [See Extrasensory Perception]
- Essay Testing** 10770
- Essential Hypertension** 10226
- Esteem (Self)** [See Self Esteem]
- Estimation** [See Also Time Estimation] 8623, 8880
- Estradiol** 9064
- Estrogens** [See Estradiol]
- Ethanol** 9249, 9264, 9268, 9276, 9281, 9320, 9322, 10004, 10103
- Ethics** [See Also Personal Values, Professional Ethics, Social Values, Values] 10838, 11175
- Ethnic Groups** [See Also American Indians, Eskimos, Gypsies, Mexican Americans] 9158, 9342, 9387, 9569, 9577, 9612, 9764, 9766, 9839, 10836, 10919
- Ethnic Identity** 9481, 9532, 9562, 9579, 9583, 9586, 9590, 10904
- Ethology (Animal)** [See Animal Ethology]
- Ethyl Alcohol** [See Ethanol]
- Etymology** 8586, 9913, 9935, 9937, 9947, 9951, 9967, 9975, 9996, 10021, 10036, 10485
- Euphoria** 10421
- Europe** 9603, 11190
- Evaluation** [See Also Educational Program Evaluation, Mental Health Program Evaluation, Personnel Evaluation, Self Evaluation] 9750, 10443
- Evaluation (Educational Program)** [See Educational Program Evaluation]
- Evaluation (Mental Health Program)** [See Mental Health Program Evaluation]
- Evaluation (Personnel)** [See Personnel Evaluation]
- Evaluation (Self)** [See Self Evaluation]
- Evaluation (Treatment Effectiveness)** [See Treatment Effectiveness Evaluation]
- Evoked Potentials** [See Also Auditory Evoked Potentials, Cortical Evoked Potentials, Somatosensory Evoked Potentials]

BRIEF SUBJECT INDEX

- tials, Visual Evoked Potentials] 9097, 9097, 9099, 9125, 9127, 9130
- Evolution (Theory of) [See Theory of Evolution]
- Exceptional Children (Gifted) [See Gifted]
- Exceptional Children (Handicapped) [See Handicapped]
- Executives [See Top Level Managers]
- Exercise 10935
- Exhibitionism 10366
- Existential Therapy 10210
- Existentialism 8585, 8606, 10211
- Expectations 8599, 8691, 8714, 8831, 8837, 8843, 8910, 8943, 8968, 8984, 8985, 9611, 9666, 9793, 9795, 9804, 9930, 10224, 10233, 10236, 10247, 10363, 10585, 10602, 10662, 10682, 10702, 10862, 10868, 10903, 10964, 10975, 11055, 11205
- Expectations (Role) [See Role Expectations]
- Experience (Practice) [See Practice]
- Experience Level (Job) [See Job Experience Level]
- Experiences (Events) [See Also Early Experience, Life Experiences, Vicarious Experiences] 8897, 9369, 10313
- Experiences (Life) [See Life Experiences]
- Experimental Psychotherapy 10222
- Experimental Apparatus [See Apparatus]
- Experimental Design [See Also Followup Studies, Hypothesis Testing, Longitudinal Studies] 8604, 9601, 9866
- Experimental Instructions 8727, 8815, 8848, 8860, 8882, 8900, 8902, 8918, 8928, 8932, 8941, 8957, 8959, 8983, 9648, 9699, 9987, 10383, 10486, 10572
- Experimental Laboratories 8606
- Experimental Methods 8577, 8602, 8604, 8606, 8817, 8988, 9274, 9442, 9637, 9969, 10361
- Experimental Neurosis 9050, 9230
- Experimental Psychology 8600
- Experimental Replication 8972, 9106, 9469, 9724, 9779
- Experimentation [See Also Related Terms] 9382, 9647, 10644
- Experimenter Bias 8599, 9689, 9799
- Experimenters 8606, 9442, 9689, 9698, 9866
- Expert Testimony 10480, 10576
- Exploratory Behavior [See Also Animal Exploratory Behavior] 8693, 9425, 9474, 9636
- Exposure Time (Stimulus) [See Stimulus Duration]
- Expressions (Facial) [See Facial Expressions]
- Extended Family 9590
- External Rewards 9615, 10867, 10881
- Extinction (Learning) 8708, 8888, 8933, 8967, 9029, 9031, 9038, 9048, 9056, 9058, 9195, 9238, 9310, 9361, 10065, 10337
- Extrasensory Perception 8565
- Extraversion 8628, 8664, 8702, 8886, 9148, 9168, 9479, 9875, 9917, 9943, 10916, 11014
- Extrinsic Motivation 8972, 9047, 9815
- Extrinsic Rewards [See External Rewards]
- Eye (Anatomy) [See Also Iris (Eye), Retina] 8704
- Eye Contact 9719, 9726, 9733
- Eye Disorders [See Also Myopia] 10438
- Eye Examination [See Ophthalmologic Examination]
- Eye Movements 8608, 8693, 8738, 8739, 8744, 8746, 8754, 8756, 8770, 8856, 9014, 9132, 9161, 9179, 9359, 9360, 9444, 9450, 10597
- Eysenck Personality Inventory 8631
- Facial Expressions 8991, 9080, 9330, 9769, 10143
- Facial Features 9359, 9766, 10121
- Facial Muscles 9141
- Facilitation (Social) [See Social Facilitation]
- Factor Analysis [See Also Cluster Analysis, Interaction Analysis (Statistics), Item Analysis (Statistical)] 8623, 8634, 8671, 8672, 8678, 8686, 8688, 9571, 10022, 10162, 11126
- Factors (Sociocultural) [See Sociocultural Factors]
- Factory Environments [See Working Conditions]
- Faculty [See Educational Personnel]
- Fads And Fashions [See Clothing Fashions]
- Failure 9747, 9793, 9797, 9804, 9838, 9880, 9902, 11000
- Faking 9987
- Familiarity 8949, 9073, 9178, 9499, 9799, 10056
- Family Background [See Also Family Socioeconomic Level, Parental Occupation] 9515, 9610, 9649, 10015, 10845
- Family Counseling [See Family Therapy]
- Family Life [See Family Relations]
- Family Members [See Also Adopted Children, Adoptive Parents, Daughters, Fathers, Heterozygotic Twins, Housewives, Illegitimate Children, Monozygotic Twins, Mothers, Parents, Siblings, Sisters, Spouses, Stepchildren, Unwed Mothers, Wives] 9604, 10107, 10192, 10216
- Family Planning [See Also Birth Control, Contraceptive Devices, Diaphragms (Birth Control), Intrauterine Devices, Oral Contraceptives] 9535, 9647, 10578
- Family Planning Attitudes 9619, 9637
- Family Relations [See Also Child Discipline, Childrearing Practices, Marital Conflict, Marital Relations, Mother Child Relations, Parent Child Relations, Parental Attitudes, Parental Permissiveness, Parental Role, Sibling Relations] 8565, 8586, 9500, 9601, 9604, 9612, 9613, 9617, 9622, 9624, 9628, 9636, 9638, 9937, 9967, 9981, 10031, 10036, 10107, 10284, 10387
- Family Size 9477, 9615, 9626, 9637, 10845
- Family Socioeconomic Level 9485, 9611, 9626, 10988
- Family Structure [See Also Birth Order, Extended Family, Family Size, Father Absence, Mother Absence, Nuclear Family, Parental Absence, Schizophrenic Family] 9507, 9626, 10291
- Family Therapy 8565, 10290, 10291, 10295, 10387, 11058
- Family [See Also Related Terms] 9626
- Fantasies (Thought Disturbances) 9354, 9666, 9973, 10203
- Fantasy (Defense Mechanism) 9820, 10043, 10536
- Father Absence 9498, 9507
- Fathers 9472, 9629, 9644, 10640
- Fear 9040, 9172, 9623, 9671, 9844, 9879, 9888, 10014, 10245, 10325, 10843
- Fecal Incontinence 10316, 10330
- Feeble-mindedness [See Mental Retardation]
- Feedback [See Also Auditory Feedback, Biofeedback, Delayed Auditory Feedback, Delayed Feedback, Knowledge of Results, Sensory Feedback, Visual Feedback] 8697, 8734, 8880, 8893, 8961, 9095, 9173, 9605, 9758, 9793, 9809, 9845, 10299, 10314, 10327, 10469, 10579, 10595, 10683, 10716, 10761, 10792, 10849, 10862, 11167

- Special Education (Phys Handicaps)** [See Physically Handicapped, Special Education]
- Special Education (Visual Handicap)** [See Special Education, Visually Handicapped]
- Special Education Students** 10966, 10968, 10969, 10973, 10984, 10993
- Special Education Teachers** 10652, 10669, 10673, 10992
- Specialization (Academic)** [See Academic Specialization]
- Spectral Sensitivity** [See Color Perception]
- Speech** [See Verbal Communication]
- Speech And Hearing Measures** 8799
- Speech Characteristics** [See Also Articulation (Speech), Pronunciation, Speech Pauses, Speech Rate, Speech Rhythm] 8601, 8798, 9467, 9730, 9934, 9955, 9961, 10060, 10129

BRIEF SUBJECT INDEX

- Speech Development** 9367, 9392, 9407, 9411, 9412, 9431, 9454, 9463, 10138, 10873
- Speech Disorders** [See Also Articulation Disorders Stuttering] 9961
- Speech Handicapped** 10136
- Speech Measures** [See Speech And Hearing Measures]
- Speech Pauses** 9367, 10085, 10922
- Speech Perception** 8794, 8796, 8797, 8798, 8799, 8800, 9342, 9403, 9411, 9453, 9467, 9924, 10083, 10092, 10102, 10104, 10143, 10144
- Speech Processing (Mechanical)** [See Compressed Speech, Synthetic Speech]
- Speech Rate** 8800, 9367, 9466, 10786
- Speech Rhythm** 8821
- Speech Therapists** 10616
- Speech Therapy** 8601, 10427, 10428, 10429, 10431, 10432
- Speed** [See Velocity]
- Speed (Response)** [See Reaction Time]
- Spelling** 10809, 10820
- Spinal Cord** [See Pyramidal Tracts]
- Spinal Fluid** [See Cerebrospinal Fluid]
- Split Personality** [See Multiple Personality]
- Spokane Indians** [See American Indians]
- Spontaneous Recovery (Learning)** 8947
- Spontaneous Remission** 9969
- Sports** [See Baseball, Football, Swimming]
- Spouses** [See Also Housewives, Wives] 9550, 9598, 9600, 9602, 9615, 9635, 9637, 10274, 10286, 10296, 10469, 10508, 10911, 11080
- Spreading Depression** 9319
- Stability (Emotional)** [See Emotional Stability]
- Standardization (Test)** [See Test Standardization]
- Standards (Professional)** [See Professional Standards]
- Stanford Binet Intelligence Scale** 8617, 10048
- Startle Reflex** 9066
- State Hospitals** [See Psychiatric Hospitals]
- Statistical Analysis** [See Also Analysis of Covariance, Analysis of Variance, Central Tendency Measures, Cluster Analysis, Confidence Limits (Statistics), Factor Analysis, Frequency Distribution, Interaction Analysis (Statistics), Item Analysis (Statistical), Mean, Predictability (Measurement), Statistical Measurement, Statistical Probability, Statistical Significance, Statistical Tests, Variability Measurement] 8619, 8642, 8674, 8677, 8678, 8683, 8685
- Statistical Correlation** 8620, 8675
- Statistical Measurement** [See Also Analysis of Covariance, Analysis of Variance, Central Tendency Measures, Cluster Analysis, Factor Analysis, Frequency Distribution, Interaction Analysis (Statistics), Item Analysis (Statistical), Mean, Predictability (Measurement), Statistical Probability, Variability Measurement] 11004, 11057
- Statistical Probability** 8808, 9963, 10970, 11203
- Statistical Reliability** 8679, 8681, 8683, 8685
- Statistical Significance** 8675, 8682
- Statistical Tests** 8680
- Statistical Validity** [See Also Predictive Validity] 8681, 11038
- Status** 9371, 9536, 9545, 9557, 9717, 9782, 9786, 9933, 9953, 10625, 10782, 11003, 11166
- Stealing** [See Theft]
- Stepchildren** 9604
- Stereotaxic Techniques** [See Brain Stimulation, Chemical Brain Stimulation, Electrical Brain Stimulation, Spreading Depression]
- Stereotyped Attitudes** 9553, 9651, 9653, 9791, 9952, 10646, 10656, 10777, 10904, 10925, 11074, 11075, 11081, 11082, 11095
- Stereotyped Behavior** 9231, 9246, 9968
- Sterilization (Sex)** [See Also Male Castration, Ovariectomy] 10437
- Stimulation** [See Also Afferent Stimulation, Auditory Stimulation, Aversive Stimulation, Brain Stimulation, Chemical Brain Stimulation, Electrical Brain Stimulation, Perceptual Stimulation, Prismatic Stimulation, Self Stimulation, Somesthetic Stimulation, Spreading Depression, Tactual Stimulation, Taste Stimulation, Visual Stimulation] 9321, 9917
- Stimulus (Conditioned)** [See Conditioned Stimulus]
- Stimulus (Unconditioned)** [See Unconditioned Stimulus]
- Stimulus Ambiguity** 8599, 8806
- Stimulus Change** 8787
- Stimulus Complexity** 8693, 8766, 8767, 8775, 8780, 8783, 8796, 8948, 8979, 9032, 9125, 9425, 10877
- Stimulus Control** 8884, 8923, 9017, 9024, 9034, 9036, 9037, 9040, 9049, 9165, 9280, 10369, 11119
- Stimulus Deprivation** [See Food Deprivation, Sensory Deprivation, Social Deprivation, Social Isolation]
- Stimulus Discrimination** 8736, 8807, 8812, 8923, 8936, 8981, 9022, 9032, 9038, 9049, 9054, 9280, 9296, 9312, 9320, 9321, 10072, 10517
- Stimulus Duration** 8786, 8789, 8790, 8793, 8869, 8890, 8948, 8979, 9018, 9029, 10374
- Stimulus Exposure Time** [See Stimulus Duration]
- Stimulus Frequency** 8696, 8711, 8792, 10084
- Stimulus Generalization** 8923, 8936, 9017, 9034, 9054, 9211, 9627
- Stimulus Intensity** 8698, 8787, 8792, 8830, 9058, 9088, 9110, 9135, 9196, 9200
- Stimulus Intervals** [See Also Interstimulus Interval, Intertrial Interval] 8795, 8939, 10059
- Stimulus Novelty** 8696, 8711, 8979, 9000, 9066, 9078, 9112, 9359, 9471, 10069
- Stimulus Parameters** [See Also Interstimulus Interval, Intertrial Interval, Stimulus Complexity, Stimulus Duration, Stimulus Frequency, Stimulus Intensity, Stimulus Intervals, Stimulus Novelty, Stimulus Salience, Stimulus Similarity, Stimulus Variability] 8859, 8999, 9049, 9695
- Stimulus Pattern** [See Stimulus Variability]
- Stimulus Presentation Methods** [See Also Tachistoscopic Presentation] 8726, 8786, 8830, 8915, 8932, 8939, 8941, 8945, 8953, 9030, 9271, 9419, 9462, 9726, 10051, 10070, 10084, 10102, 10361, 10971
- Stimulus Salience** 9470, 9700
- Stimulus Similarity** 8623, 8861, 8881, 8913, 8921, 8924, 8932, 9320, 9771
- Stimulus Variability** 8736, 8760, 8766, 8771, 8833, 10102
- Stipends** [See Educational Financial Assistance]
- Stochastic Modeling** 8691
- Strain Differences (Animal)** [See Animal Breeding, Genetics]
- Strategies** 8635, 8802, 8814, 8833, 8834, 8838, 8875, 9396, 9416, 9448, 9470, 10744, 10745
- Stress** [See Also Environmental Stress, Occupational Stress, Physiological Stress, Psychological Stress, Social Stress, Stress Reactions] 9736, 9853, 9946
- Stress Reactions** 8701, 8968, 8974, 8977, 9193, 9721, 11137
- Stroke (Cerebrum)** [See Cerebrovascular Accidents]
- Strong Vocational Interest Blank** 8632
- Stroop Color Word Test** 9833, 11065
- Student Admission Criteria** 10606, 10624, 11012, 11093
- Student Attitudes** 9512, 9574, 9779, 10607, 10656, 10660, 10674, 10680, 10682, 10695, 10704, 10732, 10740, 10751, 10764, 10767, 10770, 10772, 10788, 10793, 10795, 10796, 10827, 10843, 10851, 10852, 10864, 10876, 10887, 10900, 10901, 10903, 10908, 10913, 10917, 10923, 10927, 10930, 10934, 10935, 10936, 10939, 10941, 10943, 10947, 10952, 10957, 10960, 10962, 10964, 11004, 11005, 11022, 11043, 11048
- Student Teachers** 10650, 10654, 10655, 10658, 10660, 10663, 10673, 10676, 10682, 10687, 10692, 10693, 10696, 10702, 10708, 10712, 10716, 10717, 10718, 10721, 10722, 10939, 10941
- Student Teaching** 10682
- Students** [See Also College Students, Community College Students, Elementary School Students, Foreign Students, Graduate Students, High School Students, Junior College Students, Junior High School Students, Kindergarten Students, Medical Students, Nursing Students, Roommates, Seminars, Special Education Students, Vocational School Students] 10746, 10950, 11042

Teacher Aides 10734
Teacher Attitudes 8646, 9916, 10625, 10633, 10646, 10649, 10650, 10651, 10656, 10659, 10662, 10666, 10667, 10669, 10670, 10672, 10676, 10677, 10686, 10692, 10692, 10695, 10700, 10707, 10709, 10719, 10720, 10722, 10772, 10793, 10832, 10868, 10900, 10926, 10929, 10934, 10941, 10943, 10944, 11038, 11049
Teacher Characteristics [See Also Teacher Attitudes, Teacher Personality] 10581, 10650, 10654, 10668, 10673, 10679, 10691, 10692, 10696, 10698, 10705, 10708, 10713, 10719, 10722, 10787, 10865, 10866, 10886, 10933, 10935, 10939, 10941, 10950, 10960, 10962
Teacher Education [See Also Inservice Teacher Education, Student Teaching] 10646, 10650, 10654, 10655, 10658, 10660, 10663, 10666, 10675, 10676, 10678, 10680, 10684, 10687, 10692, 10696, 10702, 10708, 10711, 10712, 10716, 10718, 10721, 10832, 10941
Teacher Effectiveness [See Teacher Characteristics]
Teacher Personality 10648, 10650, 10656, 10690, 10693, 10701, 10707, 10712, 10717, 10924
Teacher Student Interaction 9430, 10650, 10658, 10661, 10662, 10667, 10675, 10677, 10687, 10693, 10716, 10719, 10738, 10832, 10847, 10862, 10866, 10886, 10892, 10897, 10900, 10902, 10909, 10914, 10921, 10922, 10924, 10935, 10941, 10942, 10944, 10949, 10962, 10982, 10993
Teacher Training [See Teacher Education]
Teachers [See Also College Teachers, Elementary School Teachers, High School Teachers, Special Education Teachers, Student Teachers] 9910,

10648, 10664, 10667, 10674, 10682, 10685, 10696, 10712, 10715, 10785, 10929, 10934, 11147
Teaching [See Also Audiovisual Instruction, Computer Assisted Instruction, Directed Discussion Method, Educational Audiovisual Aids, Group Instruction, Individualized Instruction, Instructional Media, Lecture Method, Lesson Plans, Motion Pictures (Educational), Open Classroom Method, Peer Tutoring, Programed Instruction, Reading Materials, Teaching Methods, Team Teaching Method, Televised Instruction, Tutoring, Videotape Instruction] 10654, 10676, 10707, 10713, 10797, 10812, 10854, 10921, 10961
Teaching (Programed) [See Programed Instruction]
Teaching Internship [See Student Teaching]
Teaching Methods [See Also Audiovisual Instruction, Computer Assisted Instruction, Directed Discussion Method, Group Instruction, Individualized Instruction, Lecture Method, Lesson Plans, Open Classroom Method, Peer Tutoring, Programed Instruction, Team Teaching Method, Televised Instruction, Tutoring, Videotape Instruction] 8859, 8922, 10323, 10338, 10347, 10571, 10648, 10655, 10720, 10723, 10725, 10728, 10729, 10732, 10735, 10737, 10738, 10741, 10742, 10746, 10748, 10754, 10757, 10760, 10766, 10774, 10787, 10791, 10796, 10798, 10802, 10804, 10807, 10808, 10809, 10813, 10814, 10815, 10820, 10824, 10825, 10830, 10831, 10832, 10865, 10883, 10887, 10923, 10948, 10957, 10965, 10967, 10972, 10978, 10981, 10986, 10992, 10994, 11051
Team Teaching Method 10995
Technical Service Personnel 11111, 11127, 11129, 11130, 11131, 11132, 11174, 11193
Technology 8600, 8624, 8626, 10639
Teenagers [See Adolescents]
Telecommunications Media [See Telephone Systems, Television, Television Advertising]
Telencephalon [See Also Amygdaloid Body, Caudate Nucleus, Cerebral Cortex, Corpus Callosum, Hippocampus, Limbic System, Motor Cortex, Occipital Lobe, Temporal Lobe, Visual Cortex] 9103, 9237
Telephone Hot Lines [See Hot Line Services]
Telephone Systems 11197, 11202
Televised Instruction 10740
Television [See Also Television Advertising] 9475
Television Advertising 9331, 9820
Television Viewing 9513, 10375
Temperament [See Personality]
Temperature (Body) [See Body Temperature]
Temperature (Skin) [See Skin Temperature]
Temperature Effects [See Also Cold Effects] 8755
Temporal Lobe 9129, 9223
Temptation 9385
Tendency Measures (Central) [See Central Tendency Measures]

BRIEF SUBJECT INDEX

- Tennessee Self Concept Scale 8636
Tension (Premenstrual) [See Premenstrual Tension]
Terminally Ill Patients 10217, 10295, 10442
Terminology (Psychological) [See Psychological Terminology]
Test (Achievement) [See Achievement Measures]
Test (Aptitude) [See Aptitude Measures]
Test (Intelligence) [See Intelligence Measures]
Test Administration 8630, 8658, 10711, 11044, 11131
Test Anxiety 8822, 8943, 10177, 10831, 11017, 11027, 11044
Test Bias (Cultural) [See Cultural Test Bias]
Test Construction [See Also Content Analysis (Test), Cultural Test Bias, Difficulty Level (Test), Item Analysis (Test), Test Items, Test Reliability, Test Standardization, Test Validity] 8630, 8632, 8635, 8646, 8650, 8651, 8653, 8655, 8656, 8695, 10123, 10699, 10710, 11038, 11075, 11117
Test Items 8611, 8664, 8684
Test Normalization [See Test Standardization]
Test Norms 8645, 8649, 8655, 8658, 8659, 9890
Test Reliability 8615, 8629, 8633, 8637, 8639, 8643, 8644, 8645, 8647, 8648, 8650, 8652, 8655, 8660, 8665, 8666, 9856, 10506, 10575, 11026
Test Scores 8620, 8622, 8683, 9107, 10311, 10894, 10896, 11055
Test Standardization 8658, 9373, 10123
Test Validity 8629, 8631, 8633, 8636, 8637, 8640, 8641, 8647, 8648, 8662, 8663, 9856, 10506, 10575, 10679, 11038, 11075, 11082, 11100
Testimony (Expert) [See Expert Testimony]
Testing [See Also Content Analysis (Test), Cultural Test Bias, Difficulty Level (Test), Item Analysis (Test), Rating, Scaling (Testing), Scoring (Testing), Test Administration, Test Items, Test Reliability, Test Standardization, Test Validity] 8649, 10177
Testing (Hypothesis) [See Hypothesis Testing]
Testing (Job Applicant) [See Job Applicant Screening]
Testing Methods [See Also Multiple Choice (Testing Method)] 8661, 8962, 11049
Tests [See Measurement]
Tests (Personality) [See Personality Measures]
Tests (Statistical) [See Statistical Tests]
Tetrahydrocannabinol 9302, 9314, 9315
Thalamus [See Geniculate Bodies (Thalamus)]
Theatre [See Drama]
Theft [See Also Shoplifting] 11101
Thematic Apperception Test 8627, 9858
Theories of Education 10560, 11032
Theories [See Also Related Terms] 8564, 8566, 8575, 8583, 8584, 8589, 8597, 9334, 9695, 9704, 9919, 10623, 10636
Theory Formulation 10447
Theory of Evolution 8571, 9134, 9696
Therapeutic Abortion [See Induced Abortion]
Therapeutic Community 10280, 10287, 10298, 10360, 10371, 10455, 10490, 10491, 10494, 10509, 10554
Therapeutic Techniques (Psychother) [See Psychotherapeutic Techniques]
Therapist Attitudes [See Therapist Characteristics]
Therapist Characteristics 10201, 10208, 10212, 10219, 10220, 10223, 10233, 10251, 10256, 10264, 10575, 10585
Therapist Effectiveness [See Therapist Characteristics]
Therapist Experience [See Therapist Characteristics]
Therapist Patient Interaction [See Psychotherapeutic Processes]
Therapist Personality [See Therapist Characteristics]
Therapist Trainees 10564
Therapists [See Also Related Terms] 10269, 10575
Therapy [See Treatment]
Therapy (Drug) [See Drug Therapy]
Therapy (Encounter Group) [See Encounter Group Therapy]
Therapy (Individual) [See Individual Psychotherapy]
Therapy (Music) [See Music Therapy]
Theta Rhythm 9099, 9210
Thinking [See Also Abstraction, Divergent Thinking, Inductive Deductive Reasoning, Inference, Logical Thinking, Reasoning] 10725, 10873
Thioridazine 9247, 9300
Thiothixene 10400
Thirst 9042
Thought Disturbances [See Amnesia, Delusions, Fantasies (Thought Disturbances), Memory Disorders, Obsessions]
Threat 8977, 9175, 9703, 9722, 9773, 9802, 9857, 9887, 9974, 10011, 10940, 11068
Threshold Determination 9009
Thresholds [See Auditory Thresholds, Critical Flicker Fusion Threshold, Pain Thresholds, Sensory Adaptation, Vibration Thresholds, Visual Thresholds]
Thumbsucking 10375
Thyroid Stimulating Hormone [See Thyrotropin]
Thyrotropic Hormone [See Thyrotropin]
Thyrotropin 9259, 10420
Time [See Interresponse Time]
Time (Interresponse) [See Interresponse Time]
Time Estimation 9908
Time Perception [See Also Time Estimation] 8735, 8790, 9393, 9509, 9908
Timidity 9872
Tissues (Body) [See Nictitating Membrane, Skin (Anatomy)]
Tobacco (Drug) [See Nicotine]
Tobacco Smoking 9289, 9674, 10189, 10326, 10354, 10544, 10547
Tofranil [See Imipramine]
Toilet Training 10316
Token Economy Programs 10171, 10346, 10357, 10360, 10371, 10377, 10503, 10920
Token Reinforcement [See Secondary Reinforcement]
Tolerance (Drug) [See Drug Tolerance]
Tolerance For Ambiguity 9891, 10582, 10855
Tone (Frequency) [See Pitch (Frequency)]
Tongue 9080, 9330
Top Level Managers 11144
Touch [See Tactile Perception]
Toxic Disorders [See Also Alcohol Intoxication, Mercury Poisoning] 9288
Toxic Encephalopathies [See Alcohol Intoxication]
Toxicity 9278, 9303, 10416
Trace (Memory) [See Memory Trace]
Tracking [See Also Visual Tracking] 8621, 8875, 9005
Traffic Control (Air) [See Air Traffic Control]
Trainable Mentally Retarded 8655, 10049, 10059, 10061, 10063, 10072, 10078, 10971
Training [See Education]
Training (Clinical Methods) [See Clinical Methods Training]
Training (Community Mental Health) [See Community Mental Health Training]
Training (Graduate Psychology) [See Graduate Psychology Education]
Training (Personnel) [See Personnel Training]
Training (Psychiatric) [See Psychiatric Training]
Training (Psychotherapy) [See Psychotherapy Training]
Tranquillizing Drugs [See Also Amitriptyline, Chlordiazepoxide, Diazepam, Haloperidol, Meprobamate, Neuroleptic Drugs, Phenothiazine Derivatives, Thioridazine, Thiothixene] 9260, 10401, 10414, 10449
Transactional Analysis 10529, 10642, 11003
Transfer (Learning) 8707, 8880, 8905, 8918, 8924, 8930, 8950, 9032, 9038, 9406, 9441, 9461, 9749, 10056, 10078, 10763, 10823, 10957
Transference (Psychotherapeutic) [See Psychotherapeutic Transference]
Transportation [See Water Transportation]
Transposition (Cognition) 8695, 8804
Transsexualism 9941
Trauma (Emotional) [See Emotional Trauma]
Traumatic Psychois [See Reactive Psychois]
Treatment Effectiveness Evaluation 10167, 10213, 10221, 10350, 10377, 10412, 10467, 10481, 10515, 10520, 10527, 10533, 10535, 10538, 10985, 10987
Treatment Facilities [See Also Child Guidance Clinics, Community Mental Health Centers, Halfway Houses, Hospitals, Nursing Homes, Psychiatric Clinics, Psychiatric Hospitals] 10545
Treatment Methods (Physical) [See Physical Treatment Methods]
Treatment [See Also Related Terms] 9937, 10132, 10168, 10180, 10188, 10193, 10199, 10557
Trial And Error Learning 8950, 9174, 10972
Trust (Social Behavior) 8837, 8977, 9717, 10044, 10720, 10980, 11170, 11176
Tryptophan 9188, 10395
Tumors [See Neoplasms]
Turners Syndrome 10157
Turnover [See Employee Turnover]
Tutoring [See Also Peer Tutoring] 10271, 10746, 10981, 10982, 10989
Tutors [See Teachers]

BRIEF SUBJECT INDEX

- Twins [See Heterozygotic Twins, Monozygotic Twins]
 Typing [See Clerical Secretarial Skills]
 Typists [See Clerical Personnel]
 Typologies (Psychodiagnostic) [See Psychodiagnostic Typologies]
- Ulcers (Gastrointestinal) [See Gastrointestinal Ulcers]
 Ultrasound 9063
 Unconditioned Stimulus 8708, 8877, 8976, 9160
 Unconscious (Personality Factor) 9821, 10244
 Underachievement (Academic) [See Academic Underachievement]
 Undergraduate Degrees [See Educational Degrees]
 Undergraduates [See College Students]
 Underprivileged [See Disadvantaged]
 Understanding [See Comprehension]
 Underweight [See Anorexia Nervosa]
 Unemployment 9525, 11069, 11113, 11164
 United Arab Republic 9953
 United States 9483, 9492, 9496, 9536, 9541, 9554, 9583, 9584, 9613, 9670, 9914, 9920, 10475, 10534, 10583, 10891, 10974, 11061, 11070, 11153
 Universities [See Colleges]
 Unwed Mothers 9633, 9861, 10169, 10483, 10487, 10632, 10645
 Upper Class 11008
 Urban Environments 8616, 8667, 9529, 9555, 9568, 9572, 9911, 9914, 9966, 10122, 10475, 10660, 10722, 11038, 11073
 Uric Acid 9169
 Urinary Function Disorders [See Urinary Incontinence]
 Urinary Incontinence 10316, 10378
 Urinary Tract [See Bladder]
 Urogenital Disorders [See Also Premenstrual Tension, Turners Syndrome, Urinary Incontinence] 10103, 10442
 Urogenital System [See Bladder]
- Vacationing 11200
 Vagus Nerve 9212
 Validity (Statistical) [See Statistical Validity]
 Validity (Test) [See Test Validity]
 Valium [See Diazepam]
 Values [See Also Personal Values, Social Values] 9480, 9519, 9551, 9584, 9591, 9616, 9635, 9673, 10565, 10638, 10725, 10912, 10937, 11083
 Variability (Response) [See Response Variability]
 Variability (Stimulus) [See Stimulus Variability]
 Variability Measurement [See Also Analysis of Covariance, Analysis of Variance] 8620, 8692
 Variable Interval Reinforcement 9028, 9039
 Variable Ratio Reinforcement 8967, 8981
 Variance [See Variability Measurement]
 Vascular Disorders [See Cardiovascular Disorders]
 Vasoconstriction 10335
 Vasoconstrictor Drugs [See Amphetamine, Methamphetamine, Norepinephrine, Serotonin]
 Velocity 8751
- Verbal Ability 8657, 8661, 8871, 9439, 9924, 10743, 10850
 Verbal Communication [See Also Adjectives, Adverbs, Articulation (Speech), Bilingualism, Compressed Speech, Consonants, Conversation, Dialect, Fingerspelling, Foreign Languages, Grammar, Handwriting, Language, Language Development, Letters (Alphabet), Linguistics, Literacy, Morphemes, Nonstandard English, Nouns, Numbers (Numerals), Phonemes, Phonetics, Phonology, Pronunciation, Psycholinguistics, Public Speaking, Semantics, Sentence Structure, Sentences, Sight Vocabulary, Sign Language, Speech Characteristics, Speech Pauses, Speech Rate, Speech Rhythm, Syllables, Syntax, Synthetic Speech, Verbal Fluency, Verbs, Vocabulary, Words (Phonetic Units), Written Language] 8803, 8816, 8823, 8916, 8977, 9129, 9336, 9339, 9367, 9412, 9457, 9466, 9489, 9605, 9616, 9621, 9699, 9711, 9715, 9720, 9732, 9809, 10100, 10121, 10136, 10248, 10266, 10379, 10428, 10614, 10617, 10673, 10693, 10718, 10746, 10874, 10909, 10922, 10969, 11176
 Verbal Conditioning [See Verbal Learning]
 Verbal Fluency 10430
 Verbal Learning [See Also Nonsense Syllable Learning, Paired Associate Learning, Serial Learning] 8727, 8811, 8881, 8901, 8902, 8906, 8909, 8919, 8920, 8928, 8934, 8943, 8945, 8947, 8958, 8965, 9406, 9419, 9444, 10077, 10095, 10145
 Verbal Meaning 8826
 Verbal Reinforcement [See Also Praise] 8969, 9944
 Verbal Tests 10127
 Verbalization [See Verbal Communication]
 Verbs 9344
 Vertebrates [See Baboons, Bats, Birds, Cats, Cattle, Dogs, Doves, Fishes, Frogs, Goldfish, Gorillas, Guinea Pigs, Hamsters, Lizards, Mammals, Mice, Monkeys, Pigeons, Primates (Nonhuman), Quails, Rabbits, Rats, Reptiles, Rodents]
 Vestibular Stimulation [See Somesthetic Stimulation]
 Veterans (Military) [See Military Veterans]
 Vibration 10517, 11194
 Vibrotactile Thresholds 8740
 Vicarious Experiences 8900, 8967, 8975, 9773
 Vicarious Reinforcement [See Vicarious Experiences]
 Victimization 9813
 Videotape Instruction 10250, 10600, 10713
 Videotapes 8911, 9850, 10177, 10274, 10486, 10609, 10664
 Vigilance 8710, 8713, 8805, 9366, 10055
 Violence 9513, 9523, 9693, 10022, 10536
 Viral Disorders [See Herpes Simplex]
 Vision [See Also Autokinetic Illusion, Binocular Vision, Brightness Perception, Color Perception, Critical Flicker Fusion Threshold, Monocular Vision, Visual Discrimination, Visual Field, Visual Perception, Visual Thresholds] 9008
 Visitation (Hospital) [See Institution Visitation]
- Visitation (Institution) [See Institution Visitation]
 Visitation [See Institution Visitation]
 Visitation (Psychiatric Hospital) [See Institution Visitation]
 Visual Cortex 9096, 9124, 9162, 9194
 Visual Discrimination 8695, 8722, 8765, 8771, 8865, 9109, 9162, 9222, 9223, 9240, 9359, 9494, 9958, 10074
 Visual Displays 8721
 Visual Evoked Potentials 9091, 9110, 9111, 9131, 9142, 9147, 9251, 9297, 9364
 Visual Feedback 8718, 8744, 9132, 9433
 Visual Field 8610, 8699, 8709, 8724, 8738, 8749, 8752, 8775, 8779, 10091
 Visual Hallucinations 10426
 Visual Masking 8757, 8760, 8767, 8774, 10074, 10079, 10254
 Visual Perception [See Also Autokinetic Illusion, Binocular Vision, Brightness Perception, Color Perception, Critical Flicker Fusion Threshold, Monocular Vision, Visual Discrimination, Visual Field, Visual Thresholds] 8583, 8608, 8650, 8699, 8710, 8719, 8723, 8724, 8728, 8738, 8739, 8742, 8745, 8747, 8750, 8752, 8755, 8758, 8759, 8762, 8763, 8766, 8770, 8773, 8774, 8776, 8778, 8780, 8783, 8785, 8818, 8958, 8998, 9117, 9222, 9272, 9360, 9413, 9441, 9444, 9449, 9451, 9464, 9465, 9471, 9569, 10058, 10062, 10079, 10082, 10091, 10099, 10136, 10517, 10742, 10818, 11184, 11187
 Visual Stimulation [See Also Illumination, Prismatic Stimulation, Tachistoscopic Presentation, Visual Feedback] 8693, 8719, 8720, 8722, 8758, 8767, 8769, 8770, 8779, 8816, 8852, 8863, 8865, 8866, 8870, 8887, 8913, 9036, 9064, 9088, 9089, 9112, 9124, 9126, 9138, 9145, 9361, 9374, 9420, 9425, 9444, 9494, 10053, 10056, 10099, 10147
 Visual Thresholds [See Also Critical Flicker Fusion Threshold] 8757, 8763, 8764, 8768, 8775
 Visual Tracking 8731, 8744, 8746

Writing (Handwriting) [See Handwriting]
Written Language [See Also Handwriting, Letters (Alphabet), Literacy, Numbers (Numerals)] 9339, 9429, 9489, 9809, 10742, 10764, 10771, 10776, 10874, 11007

X Ray Therapy [See Radiation Therapy]

Yoga 10164, 10182
Young Adults 8712, 8957, 9285, 9397, 9585, 9730, 9764, 9791, 9938, 10156, 10430, 10532, 10539, 10779, 10988
Youth (Adolescents) [See Adolescents]
Youth (Adults) [See Young Adults]
Youth (Children) [See Children]
Yugoslavia 10187, 10190, 10198, 10490

Zen Buddhism 9593

AUTHOR INDEX

The Author Index is intended to be a name index only and not a person index. "Adams, P" will be listed separately from "Adams, Paul" even though the names may refer to the same person, however, two listings for "Adams, P." may refer to two different authors. All authors are listed, not just primary authors.

- Aamry, Arwa, 8858
 Aarons, Louis, 8859

P PA PAS PASA PASAR

is an innovative service designed to benefit the individual users of psychology-related information. It provides a comprehensive literature search capability at a level of complexity achievable only through automated retrieval techniques. The intellectual burden for conducting an effective search is shared by the requester and APA information specialists who formulate specific retrieval strategies, augmenting vocabulary and other search parameters supplied by the requester. Experience has provided APA information specialists with the skills to efficiently interact with the automated data base which contains records published in *PSYCHOLOGICAL ABSTRACTS* from 1967 through the present.

Charges for processing PASAR requests are based on the amount of computer time required to perform a search. Typically these charges range from \$40 to \$60 and will not exceed \$100 unless the requester is contacted first. The total charge for a search is based on its complexity and is in most cases unrelated to the number of references retrieved. For example, a complex search strategy involving many variables or limiting factors may require more computer time and may result in fewer references retrieved than a broad search with few limiting factors.

PASAR Search Request Guidelines

The PASAR Request Form has been designed to assist you in constructing a comprehensive statement of your requirements. However, it should not restrict your input. Provide whatever other information you feel will augment the information specialist's understanding of your requirements. These guidelines should help to clarify items on the Request Form.

ITEM 1. Narrative statement of search topic. Provide a detailed description of the subject matter you wish to be retrieved. Please avoid submitting multiple, discrete requests on a single PASAR Request Form, since such cannot be processed for a single fee. However, multiple aspects of a primary subject may be requested. The distinction is illustrated in the following examples:

Acceptable: "the effects of socioeconomic status, education level, or birth order on career motivation in women."

"Career motivation" is the primary element of this request, while the other elements serve merely to qualify or narrow the scope of this rather broad subject area.

Unacceptable: "the measurement of employee attitudes concerning wages and benefits. Also desire references dealing with the factors that influence management decision-making with respect to personnel policies and procedures."

Although these two topics are closely related to the design and administration of personnel policies and procedures, two separate search strategies would have to be executed to retrieve the specific information requested, and a separate charge for each would have to be made.

ITEM 2. Descriptor(s) relevant to dependent variable(s). Provide a list of words or phrases that indicate the subject matter of prime interest. Descriptors for the "acceptable" example (see Item #1) might include: career motivation, career preference, and career aspirations.

ITEM 3. Descriptor(s) relevant to independent variable(s). Provide a list of words or phrases that will qualify or narrow the scope of the dependent variable. Descriptors for the "acceptable" example (see Item #1) might include: socioeconomic status, social class, educational level, birth order, and women.

ITEM 4. Search qualifications. Once the subject matter of the search has been defined, you may wish to refine it with specific requirements such as population or time frame. These qualifications are often essential to the actual information need; however, they can unnecessarily limit the search, causing retrieval of few of the relevant records. Therefore, consider your requirements carefully.

ITEM 5. Sorting requirements. Please indicate whether you would prefer to have references sorted alphabetically by author or chronologically by year.

ITEM 6. Intended use of search results. Provide a description of how the references resulting from your search will be used (e.g., definition of a research project, preparation of an article, proposal preparation, dissertation, etc.).

Ordering information: When ordering a PASAR search, please read the above guidelines carefully before completing the request form. A purchase order must accompany all institutional requests for a PASAR search. For individuals requesting a PASAR search, the signature of the person responsible for payment must appear on the PASAR request form.

PASAR REQUEST FORM

Psychological Abstracts Information Service

American Psychological Association
1200 Seventeenth Street, N.W.
Washington, D.C. 20036

FOR OFFICE USE

Search Request No. _____
Search Time _____
Date Received _____
Date Sent _____
APA Invoice No. _____

Address to which response should be mailed:

NAME _____

ORGANIZATION _____

STREET _____

CITY _____

STATE _____

ZIP CODE _____

AREA CODE AND TELEPHONE NO. _____

AUTHORIZED SIGNATURE _____

- ☐ Attached is my institutional purchase order # _____
- ☐ Please bill me personally at the address indicated. I agree to assume responsibility for charges resulting from this PASAR search request.

PLEASE READ GUIDELINES ON REVERSE SIDE BEFORE COMPLETING THE REQUEST FORM.
PLEASE TYPE OR PRINT

1. Narrative statement of search topic:

2. Descriptor(s) relevant to dependent variable(s):

3. Descriptor(s) relevant to independent variable(s):

4. Search qualifications: (Caution should be exercised in order not to limit unnecessarily the range of references to be retrieved. We may not always be able to meet your precise needs, but will attempt to avoid types of literature that are of no interest to you.)

- a. Population: _____ human _____ animal _____ specific animal _____
b. Age group (approximate): _____ infants _____ children _____ adolescents _____ college
_____ adults _____ aged
c. Publication date: (Current data base contains PA entries 1967 to present only) From _____ To _____

5. Sorting requirements: ☐ Author sort ☐ Year sort

6. Intended use of search results:

Psychological Abstracts

Nonevaluative summaries of the world's literature in psychology and related disciplines

PSYCHOLOGICAL ABSTRACTS 1976 CHANGES

Content Classification. As the result of an extensive study of the psychological literature, a new classification system for 1976 has been developed which groups the literature in a manner more useful to the reader. This classification outline, showing major and minor subject areas, has become the new Table of Contents. The January 1976 issue of *PA* describes these new classifications and their contents in the *Guide to PsycINFO*.

Dissertation Abstracts International. In 1976, *PA* will resume coverage of *Dissertation Abstracts International (DAI)*. Since coverage was suspended in mid 1973, there will be a period of catching up to insure that all material will be included in the 1975-1977 Cumulative Index and that no gaps will appear in the retrospective data base. The relevant dissertations for the last half of 1973, all of 1974 and 75 will be cited in the 1976 issues of *PA*. In 1977, all relevant dissertations from 1976 and 77 will be covered. The 1978 issues will include *DAI* as one of the regularly scanned journals on a current basis.

GUIDE TO PsycINFO

The *Guide* describes innovations in *Psychological Abstracts (PA)* as well as derivative products and services designed to facilitate selective access to the world's scientific literature in psychology and related disciplines. Copies of the *Guide* are available upon request from:

PsycINFO

American Psychological Association
1200 17th Street, N.W.
Washington, D.C. 20036

Psychological Abstracts (PA) provides nonevaluative summaries of the world's literature in psychology and related disciplines. Over 850 journals, technical reports, monographs and other scientific documents provide material for coverage in *PA*. About 20% of the records published in *PA* are bibliographic citations or annotations which are used to cover books, articles peripherally relevant to psychology, or articles that can be represented adequately in approximately 30-50 words.

Issue. The monthly issues contain abstracts listed under 16 major classification categories, with some categories having subsections, as shown in the Table of Contents. Under each classification heading, the abstracts are arranged alphabetically by first author. Abstracts are numbered consecutively in the two volumes produced each year.

Indexes. An author and brief subject index appear in the issues. An expanded and integrated Volume Index is published every six months. Three-year cumulative indexes are also available.

PsycINFO. *PA* records published since 1967 are now on machine readable tapes which provide the basis for automated search and retrieval services known as Psychological Abstracts Information Services (PsycINFO). For more information on these products, uses, and costs write to PsycINFO, American Psychological Association, 1200 Seventeenth St., N.W., Washington, D.C. 20036.

Correspondence on copyright matters should be directed to the permissions office, on back issue sales to the order department, and on subscriptions and address changes to Anne Redman, Subscription Manager. All correspondence should be addressed to the American Psychological Association, 1200 Seventeenth St., N.W., Washington, D.C. 20036.

Address changes must reach the Subscription Office, APA, 30 days prior to the actual change of address. Copies undelivered because of address change will not be replaced; subscribers should notify the post office that they will guarantee second-class forwarding postage. Other claims for undelivered copies must be made within 4 months of publication. Address your claims to Subscription Manager, APA.

Subscriptions are available on a calendar-year basis only (January through December). Published monthly in two volumes (January through June, and July through December), each volume contains approximately 15,000 abstract records. Volume Indexes are published twice a year under separate cover. Subscription price including Indexes per year is \$220 domestic, \$230 foreign. To subscribe, write to Subscription Manager, APA.

KEY TO THE TEXT

The examples of different types of *Psychological Abstracts* records presented here are number coded to provide definition of their elements.

JOURNAL ARTICLE ABSTRACT

¹1271. ²Conger, Anthony L. & Coie, John D. (Duke U) ⁴Who's crazy in Manhattan: A reexamination of "Treatment of psychological disorders among urban children." ³*Journal of Consulting & Clinical Psychology*, 1975(Apr), Vol 43(2), 179-182. — ⁶Reanalyzed data reported by T. S. Langner et al (see PA, Vol. 52:8150) on the prevalence of psychological disturbances in children from welfare and cross-section homes. Results indicate that the data show no meaningful differences in means or skew and a paradoxical greater heterogeneity among welfare children. Some of the difference in variance is clearly attributable to the differential reliability of final scores, and perhaps the remaining difference is due to between-rater differences. Unless other factors were operating, 2 possible conclusions are tenable: Either welfare children manifest both more health and more disturbance than cross-section children or there are no differences in disorder between the populations. A 3rd conclusion is also offered: The populations do actually differ, but the manner in which the disturbance was viewed, rated, and compared necessarily obscured any differences. ⁸(15 ref.) — ¹⁰*Journal Abstract*.

- 1—Record number
- 2—Author(s) or editor(s). As many as four are listed; if there are more than four, the first is listed followed by "et al." Succession marks (i.e., Jr., II, III, etc) are not given.
- 3—Affiliation of first-named author/editor only.
- 4—Article title, including subtitles: If the original article is in a foreign language, the translated title is given in brackets and the language of the original article is indicated in parentheses.
- 5—Primary publication title and bibliographic data.
- 6—Text of abstract
- 7—Reference to a previous entry in *Psychological Abstracts*. If an abstract number is unavailable at time of publication, the issue number is given. Consult the Author Index of the PA issue noted in order to determine the record number for the article
- 8—Summaries included in the primary publication are listed when in language(s) other than that of the article
- 9—Number of references is included when there are 15 or more listed
- 10—Abstract source.

BOOK CITATION

¹1703. ²Sugar, Max (Ed). (Louisiana State U, Medical School, New Orleans) ⁴The adolescent in group and family therapy. ³New York, NY: Brunner/Mazel, ⁸1975. ⁹xvii, ¹⁰286 p. ¹¹\$13.50.

- 1—Record number.
- 2—Author(s) or editor(s). As many as four are listed, if there are more than four, the first is listed followed by "et al." Succession marks (i.e., Jr., II, III, etc) are not given.
- 3—Designation of editor.
- 4—Affiliation of first-named author/editor only
- 5—Book title. If the book is in a foreign language, the original title is given followed by a translated title and the language of the book is indicated in parentheses
- 6—Place of publication
- 7—Publisher.
- 8—Year of publication
- 9—Prepagination.
- 10—Total pagination
- 11—Price
- 12—Annotation occasionally follows.

BOOK CHAPTER CITATION

¹1641 ²Berkovitz, Irving H. & Sugar, Max. (U California, Los Angeles) ⁴Indications and contraindications for adolescent group psychotherapy. ³In M. Sugar (Ed), *The adolescent in group and family therapy*. New York, NY: Brunner/Mazel, 1975. ⁹xxvii, ¹⁰286 p. ¹¹\$13.50.

- 1—Record number
- 2—Author(s) of cited chapter. As many as four are listed, if there are more than four, the first is listed followed by "et al." Succession marks (i.e., Jr., II, III, etc) are not given
- 3—Affiliation of first-named author only
- 4—Chapter title
- 5—Reference to the whole book and its bibliographic data

CONTENT CLASSIFICATION: PA has subsections for some of the 17 major classification categories. These are displayed in the Table of Contents and are designed to group all abstracts relevant to a narrower topic than the major categories under a single heading. Abstracts that are relevant to a major category but not to any of the subsections are listed first and followed by abstracts that are relevant both to a major category and also to the subsections. It is expected that this will help readers locate material related to their interests more quickly.

ABBREVIATIONS: In addition to commonly understood abbreviations* (including all units of measurement, educational degrees, standard statistical abbreviations, and standard Latin and reference terms), standard abbreviations used in *Psychological Abstracts* records are

CA	= chronological age
CNS	= central nervous system
CR	= conditioned response
CS	= conditioned stimulus
DRL	= differential reinforcement of low rates (of responding)
E	= experimenter
ECS	= electroconvulsive shock
EKG	= electrocardiogram (graph)
EMG	= electromyogram (graph)
EPPS	= Edwards Personal Preference Schedule
Exp	= experiment
FI	= fixed interval (reinforcement)
FR	= fixed ratio (reinforcement)
GPA	= grade point average
GSR	= galvanic skin response
ip	= intraperitoneal (ly) (injections)
iv	= intravenous (ly) (injections)
MA	= mental age
MAO	= monoamine oxidase
MMPI	= Minnesota Multiphasic Personality Inventory
NREM	= nonrapid eye movement
REM	= rapid eye movement
ROTC	= Reserve Officer's Training Corps
RT	= reaction time
S	= subject
SVIB	= Strong Vocational Interest Blank
TAT	= Thematic Apperception Test
UCR	= unconditioned response
UCS	= unconditioned stimulus
US	= United States of America
USSR	= Union of Soviet Socialist Republics
VI	= variable interval (reinforcement)
VR	= variable ratio (reinforcement)
WAIS	= Wechsler Adult Intelligence Scale
WISC	= Wechsler Intelligence Scale for Children
16 PF	= Sixteen Personality Factor Questionnaire

Computer languages and computer names will also be used without definition, e.g. ALGOL, COBOL, FORTRAN, IBM 360

Language abbreviations used after translated titles are

Afri	= Afrikaans	Iran	= Iranian
Albe	= Albanian	Ital	= Italian
Arab	= Arabic	Japn	= Japanese
Bulg	= Bulgarian	Lith	= Lithuanian
Chin	= Chinese	Norg	= Norwegian
Czec	= Czech	Polh	= Polish
Danh	= Danish	Port	= Portuguese
Duth	= Dutch	Romn	= Romanian
Finn	= Finnish	Russ	= Russian
Flem	= Flemish	Slov	= Slovene
Fren	= French	Slak	= Slovak
Geor	= Georgian	Span	= Spanish
Germ	= German	Srcr	= Serbo-Croatian
Grek	= Greek	Swed	= Swedish
Hebr	= Hebrew	Turk	= Turkish
Hung	= Hungarian	Ukrn	= Ukrainian
		Yugo	= Yugoslavian

PSYCHOLOGICAL ABSTRACTS

Volume 55

June 1976

Number 6

GENERAL PSYCHOLOGY

11210. **Ardila, Rubén.** (U de los Andes, Bogotá, Colombia) [The history of Colombian psychology and the five-year (1970-1975) plan.] (Span) *Revista Latinoamericana de Psicología*, 1975, Vol 7(3), 435-446. —Describes the plan to develop psychology as a science and as a profession in Colombia, and how it was accomplished. The plan included (a) legal recognition of psychology as a profession, (b) revitalization of the Colombian Federation of Psychology, (c) foundation of the Association for the Advancement of Psychology, (d) organization of graduate psychology programs, (e) improvement of psychology at the high school level, and (f) organization of national and international congresses of psychology.—*English summary.*

11211. **Glasser, William.** (Inst for Reality Therapy, Los Angeles, CA) **Positive addiction.** New York, NY: Harper & Row, 1976. xi, 159 p. \$7.95.—Presents a new concept which argues that it is possible to become "addicted" to positive behavior which develops the character and the body, helps one to overcome negative addictions, and leads one to an integrated and rewarding life. The positive addictions of running and meditating are explored.

11212. **Isakower, Otto.** **Self-observation, self-experimentation, and creative vision.** *Psychoanalytic Study of the Child*, 1974, Vol 29, 451-472. Discusses Johannes Müller's 19th century self-observations in the physiological and psychological investigation of the processes of creative vision. Personal biographical data are examined in conjunction with the directions and successes of his scientific efforts.

Parapsychology

11213. **Friedman, Ronald M.; Schmeidler, Gertrude R. & Dean, E. Douglas.** **Ranked-target scoring for mood and intragroup effects in precognitive ESP.** *Journal of the American Society for Psychical Research*, 1976(Apr), Vol 70(2), 195-206.—532 undergraduates recorded on mark sense cards their moods, some additional data, and 20 ESP calls. 568 undergraduates later took a similar test. The canonical correlation between moods and ESP scores of the 1st group was used to weight mood scores of the 2nd group and to predict what their ESP scores would be. The correlation between predicted and obtained ESP scores was highly significant ($p < .0007$). Moods most conducive to ESP success were lack of aggression and lack of social affection. Also, when members of one sex were markedly in the minority in their class, their ESP scores were (as hypothesized) significantly lower than scores of the majority sex

($p < .02$). Hypotheses about declining scores and attitude toward the task were not confirmed. A ranked-target method of scoring was introduced, as opposed to the usual binary hit-or-miss score, and it is suggested that such weighted scoring is a paradigm for business decisions made in the absence of normally acquired information.—*Journal abstract.*

11214. **Gregory, Anita (Ed).** (Polytechnic of North London, England) **ESP and psychology: Sir Cyril Burt.** New York, NY: John Wiley & Sons, 1975. 179 p. —Presents papers of a scientist who combined a commitment to the study of consciousness with rigorous analytical methods. He concludes that the evidence for ESP is satisfactory and has far-reaching and radical consequences, including the incorporation of parapsychological evidence into general psychology. Topics include evolution and parapsychology, Jung's account of his paranormal experiences, and suggestions for psychical research. (3 p ref)

11215. **Grosso, Michael.** (Jersey City State Coll) **Some varieties of out-of-body experience.** *Journal of the American Society for Psychical Research*, 1976(Apr), Vol 70(2), 179-193.—Presents a theory of out-of-body experiences (OBEs) in which it is proposed that instead of the mutually exclusive states of being "in" or "out" of the body, there are varying degrees of being "out." At one end of the continuum is the dramatic experience of seeming fully out of the body, while at the other end the S is wholly identified with his bodily organism. Other states of consciousness which have some characteristics of the OBE continuum are described: traveling clairvoyance, hypnosis, schizophrenia, dreaming, and states induced by drugs, meditation, and reflection. Thus the ostensibly paranormal OBE condition is viewed as an extreme manifestation of a process which is present in a variety of conditions of human experience, normal and abnormal as well as paranormal.—*R. A. White.*

11216. **Panati, Charles.** (Columbia U) **Supersenses: Our potential for extrasensory experience.** New York, NY: Doubleday, 1976. xiv, 341 p. \$3.50.—Briefly surveys current research on a number of aspects of parapsychology, chiefly studies of telepathy clairvoyance, psychokinesis, precognition, and psychic healing.

11217. **Stanford, Rex G. et al.** (St John's U) **A study of motivational arousal and self-concept in psi-mediated instrumental response.** *Journal of the American Society for Psychical Research*, 1976(Apr), Vol 70(2), 167-178. —Tested 2 hypotheses: (a) that the tendency to produce psi-mediated instrumental response (PMIR), or nonintentional ESP or psychokinesis, is positively related to the strength of the need subserved by PMIR (need-strength hypothesis); and (b) that with respect to that need, extrasensory response may be systematically

misused in the presence of a negative self-concept (self-concept hypothesis). In a free-association test, if an S produced his longest (or shortest) reaction time (depending on the experimental contingency) on a randomly chosen ("key") word of a word list, he subsequently experienced a pleasant, potentially sexually arousing condition. If he did not produce the required reaction time, he subsequently experienced an unpleasant condition. 72 Ss (all males, 18 in each of 4 conditions) were not informed that reaction time on one of the words relative to that on the others controlled their fate; it was assumed they would use PMIR in the service of their needs. Sex of E was manipulated. The need-strength hypothesis was confirmed: Ss tested by female Es showed significantly more disposition toward PMIR than those tested by male Es ($p = .025$). Ss tested by female Es showed significant positive performance ($p < .04$). The self-concept hypothesis was not confirmed.—*Journal abstract*.

11218. **Stevenson, Ian.** (U Virginia) **Further observations on the combination lock test for survival.** *Journal of the American Society for Psychical Research*, 1976(Apr), Vol 70(2), 219-229.—Updates observations, recommendations, and suggestions concerning the author's "combination lock" test for providing evidence of survival after death. In this test a person sets a combination lock while living, but makes no record of the combination of numbers which will open the lock and which he intends to communicate after his death.—*R. A. White*.

11219. **Terry, James C. & Honorton, Charles.** **Psi information retrieval in the ganzfeld: Two confirmatory studies.** *Journal of the American Society for Psychical Research*, 1976(Apr), Vol 70(2), 207-217.—In each of 2 confirmatory studies of psi retrieval involving ganzfeld procedures the Ss were divided into sender-receiver teams. Auditory and visual perceptual input to the receivers was regulated via ganzfeld stimulation. While the receiver gave a mentation report following instructions to "think out loud," the sensorially-remote sender viewed a series of thematically related stereoscopic slides in an attempt to influence receiver mentation. At the end of each session, the receiver blind-rated 4 different sets of slides in order of perceived correspondences with his or her mentation during the session. Statistically significant results were obtained in both studies. Exp I involved 27 sessions with a high level of accuracy of target retrieval. Exp II involved 60 sessions with a high level of accuracy. Obvious correspondences between targets and receiver mentation were observed in both studies. The results replicate the earlier ganzfeld studies. It is concluded that the ganzfeld procedure effectively promotes the detection and accurate recovery of sensorially remote stimuli (i.e., ESP).—*Journal abstract*.

11220. **White, Rhea A.** **The influence of persons other than the experimenter on the subject's scores in psi experiments.** *Journal of the American Society for Psychical Research*, 1976(Apr), Vol 70(2), 133-166.—Surveys the literature indicating that persons other than the E or S who take part in psi tests may also affect the results. The influence of observers, randomizers, checkers, and agents is discussed. This influence is usually indirect, but may sometimes be direct, i.e., psi-determined. It is suggested that the potential influence on psi

test results of participants other than the S should be taken into account in designing experiments, and that a holistic, field approach to the testing situation be adopted. (86 ref)—*Journal abstract*.

History & Philosophies & Theories

11221. **Bassan, Fiorella.** (U Rome, Inst di Filosofia, Italy) **[Psychoanalysis and philosophy in the thinking of Money-Kyrle: I.]** (Ital) *Archivio di Psicologia Neurologia e Psichiatria*, 1975(Apr-Jun), Vol 36(2), 204-231.—Discusses Money-Kyrle's contribution to ethics and politics. He overcame the ethical relativism of neopositivism to found scientific ethics, based on psychoanalytic thinking. The concept of normality as rationality and freedom from distortions in unconscious fantasy is basic to this attempt. Using M. Klein's concept of the superego, persecutory and depressive elements in guilt form the basis for either the authoritarian or humanistic type of conscience. The authoritarian conscience is based on unconscious distortions, while the humanistic conscience is an attribute of normality.—*L. L'Abate*.

11222. **Chatel, John & Joe, Barbara.** (St Elizabeths Hosp, Forensic Div, Washington, DC) **Psychiatry in Spain: Past and present.** *American Journal of Psychiatry*, 1975(Nov), Vol 132(11), 1182-1186.—Discusses the contributions and history of psychiatry in Spain on the basis of extensive literature review and on-site observations. The history of Spanish psychiatry is a rich one, including pioneering efforts in the establishment of mental institutions and a strong traditional alliance between psychiatry and literature. However, it is noted that Spanish psychiatrists today are less innovative than their counterparts in other countries. The historical and cultural context of the discipline is emphasized, with illustrations of the importance of the church, attitudes toward the family, and other sociocultural factors. (29 ref)—*Journal abstract*.

11223. **Coulthurst, James J.** (U Illinois) **Behaviorism in education and society: The implications of Skinnerian ideology.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7638.

11224. **Czerwionka, Felicia E.** (U Notre Dame) **The self in William James's psychology.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6696 6697.

11225. **de Boer, Th.** (U Amsterdam) **[Assumptions of a critical psychology.]** (Duth) *Nederlands Tijdschrift voor de Psychologie en haar Grensgebieden*, 1975(Dec), Vol 30(9), 715-818.—Presents philosopher's views of the issues in psychology. The determination of the true nature of man involves the question of to what extent and in what direction his behavior is the outcome of his culture and/or the results of his own deliberations. Individual freedom is discussed from the viewpoints of existentialism and neo-historicism. (a revival of the glorification of society's past) and their conflicting concepts of human responsibilities. The discussion about critical psychology asks whether humans operate in terms of nomological structures or dialogues. The characteristics of the latter include the inherent intentionalities, validities, reliabilities, rationalities, and authenticities of the individual or groups. The concept that the human operates in terms of nomological structures

must include the likelihood of revolutionary changes that could test the validities of those structures. The psychoanalytic approach is considered useful in the explication of human behavior. (114 ref)—*A. J. Ter Keurst.*

11226. **Eacker, Jay N.** (Whitman Coll) **Problems of philosophy and psychology.** Chicago, IL: Nelson-Hall, 1975. xi, 201 p. \$9.95.—Examines 13 philosophical problems of psychology: the mind-body problem, metaphysics, reification, explanation, causality, theory, laws and principles, anthropomorphism, purpose, freedom, knowledge, induction, and the fact-value problem. (7 p ref)

11227. **Eshelman, Larry J.** (U Waterloo, Canada) **Persons, robots and self-deception: A philosophical analysis of psychological defense mechanisms.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6698.

G.** (U Warwick, Coventry, England) **Towards a phenomenological mathematics.** *Philosophy & Phenomenological Research*, 1975(Sep), Vol 36(1), 16-24.—Attempts to discover, partly by considering the logical and philosophical approaches to mathematics, how phenomenological mathematics would be formulated. The notion of order is proposed to overcome the difficulties in the relationship of contemporary mathematics to the world. (23 ref)—*R. Gutzke.*

11229. **Filipec, Jindřich.** (Československá Akademie Věd, Ústav pro filosofii a sociologii, Prague) [**Science, ideology, and systems.**] (Czec) *Sociologický Časopis*, 1974, Vol 10(6), 561-570.—Reprints a paper, presented in 1974 at the International Congress of Sociology in Toronto, in which Western social theories about the impact of modern scientific and technological progress are critically discussed from the Marxist-Leninist standpoint. It is suggested that 2 opposite tendencies prevail among bourgeois theorists: at 1 pole, the technophobia expressed by the romantic "back to nature" movement; at the other, technocratic and scientocratic social reformism and meliorism designed to strengthen class discrimination and the power of monopolistic capitalism. American, French, and German versions of the "systems approach," which is supposed to achieve a planned transformation of the traditional "liberal age" into a kind of "postindustrial society," are briefly mentioned. The Marxist-Leninist application of system theories differs from the bourgeois one in that scientific social planning is done within the socialist society, to establish the socialist way of life. A. Siddiqui and L. von Knoblauch zu Hatzbach (see PA, Vol 53:7379) in their attempt to discredit N. Cliff's law of adverbs as multipliers. If irrelevant materials are excluded, the law as formulated by Cliff is still valid. (English & French summaries)—*W. J. Koppitz.*

11231. **Hooker, C. A.** (U Western Ontario, London, Canada) **The information-processing approach to the brain-mind and its philosophical ramifications.** *Philosophy & Phenomenological Research*, 1975(Sep), Vol 36(1), 1-15.—Argues that the brain-mind receives information

in the form of nonrandom fluctuations in physical magnitude from its environment via various "sensory" modalities. Since every act of perception is an act of classifying and relating classified information (i.e., conceptualizing), language is unable to express every concept one might have. A linguistic reconstruction of cognitive content is less profitable for a theory of knowledge than an information theory approach to express the structure of rational mental processes. This approach undermines the traditional epistemological approach and can be applied regardless of age or culture of the S. It is further suggested that objects of theoretical science (electrons, chemical radicals, cells, etc) might be spatio-temporal structures of causes, causes responsible for the structure received by sensory receptors.—*R. Gutzke.*

11232. **Hrzal, Ladislav.** (Komunistická strana Československá, Ústřední výbor, Prague) [**The substance of man in Marxism.**] (Czec) *Sociologický Časopis*, 1974, Vol 10(6), 589-595.—Discusses the problem of "human nature" and, in accordance with the classic Marxist conception, denies the possibility of an unchangeable substance or essence of man. It is asserted that an abstract "man in general," outside history and society, does not exist. Quoting Marx (in *Thesis on Feuerbach*), human substance is defined as the totality of man's social relations. (Russian & English summaries)—*V. S. Fischmann.*

11233. **Huláková, Marie.** (Československá Akademie Věd, Ústav pro filosofii a sociologii, Prague) [**On problems of studying value orientation.**] (Czec) *Sociologický Časopis*, 1974, Vol 10(6), 633-639.—Theorizes about the role of philosophy, sociology, and psychology in the study of values, and affirms that the Marxist-Leninist philosophy is the only key to understanding the historical factors that determine the value orientations of society and man. (Russian & English summaries)—*V. S. Fischmann.*

11240. Schur, Max. **Freud: Living and dying.** New York, NY: International U Press, 1972. xiii, 587 p. \$6.95. —Presents a critical analysis by Freud's personal physician of some of Freud's concepts, particularly that of the "death instinct." Freud's thoughts about and attitude toward death, both before and concurrent with his terminal illness, are examined in connection with the events of the last years of his life.

11241. Smith, Barbara K. (U California, Santa Cruz) **The subject-object unity in action and creativity.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5176.

11242. Thorson, Thorlund W. (Northwestern U) **A rhetorical analysis of the discourse of B. F. Skinner and his principal critics.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 2), 6160.

11243. von Kreitor, Nikolaj-Klaus. (U Lund, Sociological Inst, Sweden) **[Humanistic sociology and psychology.]** (Swed) *Nordisk Psykologi*, 1975, Vol 27(3), 161-173. —Several aspects of humanistic sociology and psychology are analyzed in terms of their philosophical and scientific basis. Two different concepts exist as to the nature of humanistic sociology and psychology: the sociological and the methodological. The first tries to broaden understanding of lawful relationships of a general character (nomothetic); the second tries to achieve understanding of separate phenomena (idiographic). The sociological concept distinguishes humanistic sociology and psychology from positivism on the basis of the object being studied. The methodological concept is considered a subjective form of understanding which mistakenly detaches social actions from their social context.—P. Mylov.

11244. Wilhelm, Frederick E. (U California, Los Angeles) **Theory of knowing in Husserl's phenomenology.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1363.

11245. Wozniak, Robert H. (U Minnesota, Inst of Child Development) **A dialectical paradigm for psychological research: Implications drawn from the history of psychology in the Soviet Union.** *Human Development*, 1975, Vol 18(1-2), 18-34.—The recent return within Western experimental psychology to the study of cognitive process is viewed as implying a basic psychophilosophical reorientation. One aspect of this reorientation is a renewal of interest in the dialectic as a metatheoretical analytic tool for psychology. It is suggested that a study of the intellectual history of the somewhat parallel shift to a dialectical-cognitive perspective in the Soviet psychology of the 1930's might help to clarify the implications of the dialectical method for contemporary Western cognitive psychology. In this light, the psychophilosophical issues involved in the shift

to a dialectical perspective in early Soviet psychology are reviewed. (29 ref)—*Journal abstract.*

Research Methods & Apparatus & Computer Applications

11246. Barton, David. (University Coll, London, England) **Statistical significance in phonemic perception experiments.** *Journal of Child Language*, 1975(Nov), Vol 2(2), 297-298.—Replies to M. L. Edwards's (1974) use of a discrete criterion of 7 correct responses in a session of 10 trials to judge whether or not a child could make a particular discrimination. The present author calls the criterion "a striking inadequacy in the experimental design" and states that it introduces such a large random error into the results as to render them uninterpretable.

11247. Bazargan, Abbas. (U Pittsburgh) **A study of the precision of different sampling methods in assigning experimental units in stratified designs.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1346-1347.

11248. Chasey, William C. et al. (George Peabody Coll for Teachers) **A stabilometer computerized analog recording system for studying gross motor skill learning.** *Behavior Research Methods & Instrumentation*, 1975(Nov), Vol 7(6), 553-556.—The stabilometer computerized analog recording system (SCARS) presents a unique data analysis and storage system for studying motor learning strategies. Graphic computer printouts, total time in balance, total number of contacts, time between contacts, standard deviation of the time between contacts, mean angle of balance, and standard deviation of the angle of balance for each trial are derived.—*Journal abstract.*

11249. Christianson, Darryl L. & Bond, Rebekah B. (North Texas State U) **A private prompting/intercom system: Technical modifications and safety considerations.** *Behavioral Engineering*, 1975(Fal), Vol 3(2), 41-42.—Describes procedures for adding a volume control and a miniature socket for an AC power adapter, both of which greatly increase the utility of the intercom system for training therapists in behavior modification techniques. Precautions for use with young children and retardates are noted.

11250. Doty, Richard L. & Silverthorne, Colin. (U Pennsylvania, Monell Chemical Senses Ctr) **Influence of menstrual cycle on volunteering behaviour.** *Nature*, 1975(Mar), Vol 254(5496), 139-140.—Obtained data by questionnaire, including information on menstrual cycle, from 58 women in a university child psychology class, who were then asked by a male sociologist to volunteer for a research project. The menstrual cycle of all Ss who were not taking oral contraceptives was divided into 5 phases. Most of those who volunteered were in the 5-day ovulatory phase, approximately 14 days from the menstrual cycle. Replication of the study a year later, with 59 Ss and a female sociologist to request volunteers, gave the same general results. The possible physiological and psychological changes that may influence volunteering are discussed. Most studies have assumed a random distribution of volunteering during the menstrual cycle, but these findings suggest that many experiments that use female volunteers test a disproportionate number

whose hormonal status is skewed from that of the normal female population. (15 ref)—*I. Davis.*

11251. **Farrell, John P.** (US Army Research Inst for the Behavioral & Social Sciences, Arlington, VA) **Simulating night visual conditions during the day with light attenuating filters.** *Behavior Research Methods & Instrumentation*, 1975(Nov), Vol 7(6), 539-541.—Describes a method for simulating night visual conditions during the day and discusses considerations in choosing light-attenuating techniques such as attenuation of infrared and ultraviolet illumination, neutrality, and clarity. An experimental application is described, in which a dual density filter with less attenuation in the lower field was chosen for aviation applications so that the major instruments would be available. This dual density concept was found to be more successful for piloting than for navigation. Other applications (e.g., obstacle-avoidance, automobile-driving, and circadian-rhythm research) are noted.—*Journal abstract.*

11252. **Furedy, John J.; Poulos, Constantine K. & Schiffman, Karl.** (U Toronto, Canada) **Logical problems with Prokasy's assessment of contingency relations in classical skin conductance conditioning.** *Behavior Research Methods & Instrumentation*, 1975(Nov), Vol 7(6), 521-523.—Argues that W. F. Prokasy (see PA, Vol 55:Issue 5) has not dealt with the main issue raised in the present authors' (see PA, Vol 54:8919) paper: that "adjustments" to previously random schedules can result in violations of randomness. With regard to those points which Prokasy has chosen to discuss, it is stressed that the logical basis of Prokasy's method of assessing contingencies is faulty in that it leads to paradoxical consequences. Direct quotes are provided to show that, as indicated in the present authors' previous paper, and contrary to Prokasy's claim, doubts concerning the associative status of 1st-interval electrodermal responses have been published by several investigators.—*Journal abstract.*

11253. **Geller, Henry A.; Damkot, David K. & Toussie, Sam R.** (U Vermont) **A data acquisition system for unobtrusive measurement of on-road driving behavior.** *Behavior Research Methods & Instrumentation*, 1975(Nov), Vol 7(6), 526-530.—Notes that unobtrusive measurement of on-road driving, utilizing permanently installed pavement sensors and movable photographic devices, requires expensive installation and/or time-consuming data reduction. The present paper describes a mobile system for remotely measuring driving performance on public highways and recording the data in computer compatible format. Speed and lateral movements of cars are sensed via a radar antenna and video camera, electronically processed, and stored on magnetic tape. The taped records can be read automatically and compiled by computer.—*Journal abstract.*

11254. **Green, T. R.** (MRC Social & Applied Psychology Unit, Sheffield U, England) **Computer translation with paired grammars.** *Behavior Research Methods & Instrumentation*, 1975(Nov), Vol 7(6), 557-562.—In certain types of experiments, the S controls an on-line computer by giving commands in a simple source language possibly a subset of English or of a high-level computer language. The commands must then be decoded before they can be obeyed. One method is to

write an ad hoc program for the specific purpose. An alternative is to write a general purpose translator to decode the source language into a more primitive target language. A suitable translator is described, driven principally by paired context-free grammars of the source and target languages, but also able to accommodate content-sensitive rules. Using the translator, it is much easier to write an ad hoc recognizer for a very primitive language than for a subset of English. For small languages it is easy to write and check grammars, and the finished product is unlikely to contain hidden bugs. An example of the method—translating a string of commands out of a language using nested conditionals and into a language using jumps to labels—is given.—*Journal abstract.*

11255. **Hoats, David L.** (Edward R. Johnstone Training & Research Ctr, Bordentown, NJ) **A pair of electronic devices for detecting restricted-band audio and ultrasonic frequencies.** *Behavior Research Methods & Instrumentation*, 1975(Nov), Vol 7(6), 542-544.—Discusses the bandpass active filter and the phase-locked loop, together with applications of each: studies of animal vocalization and human speech-processing patterns, and the decoding of multiple command signals, respectively. Further sources of information on theory and practical circuitry, as well as to sources of components and finished units, are included. (22 ref)

11256. **Legewie, Heiner; Dirlich, Gerhard & Gerster, Freidemann.** (Max-Planck-Inst für Psychiatrie, Munich, W Germany) **Computer software: An application language for psychophysiological experimentation.** *Psychophysiology*, 1975(Nov), Vol 12(6), 713-716.—Describes the development and uses of Adaptive Bio-Signal Language (ABS), an application language for biosignal processing and experimental control. It is run on an IBM 1130 connected to a WDV Lab Interface which allows biosignal input and process control output and which serves as a realtime clock. ABS allows individual programs to solve a set of problems in psychophysiological experimentation, including on-line acquisition and reduction of biosignals from up to 20 input channels, including 4 channels of EEG; simultaneous experimental control by simple statements for time scheduling, control of the output channels, logic and arithmetic operations applied to the reduced biosignals for feedback functions; facilities for on-line interaction with the E and for on-line testing; and organization of a complete data file of the experiment on a background storage device.—*Journal abstract.*

11257. **Lurçat, François.** (U Paris XI, Lab de Physique théorique et Hautes énergies, Orsay, France) **[The methods, techniques, and objectives of research.]** (Fren) *Archives de Psychologie*, 1975(Spr), Vol 43(169), 83-104.—Discusses general laws governing thought which researchers can study. It is argued that the researcher's 1st task is to gather facts, discovered by producers' practice or by researchers' experiments and observation. Such facts form the foundation of the work, without fear of challenging established authorities. The need for hypotheses in the discovery and interpretation of facts, and the need for locating each phenomenon historically and geographically, are discussed. (French & German summaries) (24 ref)—*English summary.*

11258. Morelli, Marcello; Musumeci, Daniela & Nicotra, Leopoldo. (CNR, Lab de Neurofisiologia, Pisa, Italy) **Apparatus for quantitative evaluation of visually guided pecking in the pigeon.** *Pharmacology Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 919-922.—Describes an apparatus using a phase-locked loop which allows automated, differential counts of correctly and incorrectly oriented pecks, elicited by apomorphine in the pigeon. This apparatus provides a unique and precise means for the study of this characteristic visually guided behavior. Details of the electronic circuit and an example of the records obtained in standard experimental conditions are included.—*Journal abstract*.
11259. Pearl, Gary S. & Anderson, Kenneth V. (Emory U) **Use of cobalt impregnation as a method of identifying mammalian neural pathways.** *Physiology & Behavior*, 1975(Nov), Vol 15(5), 619-622.
11260. Prokasy, William F. (U Utah) **Random control procedures in classical skin conductance conditioning.** *Behavior Research Methods & Instrumentation*, 1975(Nov), Vol 7(6), 516-520.—Discusses differences in opinion concerning what constitute proper procedures for providing random controls in classical skin conductance conditioning. Selected aspects of a methodological discussion of control procedures and permissible inferences, including subjective contingencies, pairings analysis, and response definition, provided by J. J. Furedy et al (see PA, Vol 54:8918) are commented on.—*Journal abstract*.
11261. Regan, D. (U Keele, Staffordshire, England) **Recent advances in electrical recording from the human brain.** *Nature*, 1975(Feb), Vol 253(5491), 401-407.—Summarizes and discusses new methods for recording evoked potentials (EPs) to sensory stimulation. These methods have both theoretical and practical implications. EPs can be used as a diagnostic tool in some pathological conditions; they can shed light on the mechanisms by which sensory information is processed in the brain, and can reveal parallel processing, in which different types of information are handled simultaneously in separate CNS channels. EP recordings can help bridge the gap between findings of electrical activity in the nerve cells of laboratory animals and human conscious perception. They also offer access to brain functions that cannot be directly studied, in normal and diseased brains and in the sensory functions of young children. Among other areas given special attention in this review are the color coding of pattern vision and the effects of uncolored pattern stimuli. (125 ref)—*I. Davis*.
11262. Rezek, Milan & Havlicek, Viktor. (U Manitoba, Winnipeg, Canada) **Chronic multipurpose cannulas and a technique for the cannulation of small veins and arteries.** *Physiology & Behavior*, 1975(Nov), Vol 15(5), 623-626.—Describes 2 simple, inexpensive, and reliable cannula systems for infusion of experimental substances in chronic, unrestrained animals. One system is open and the other is closed; use of both together facilitates taking of blood samples and samples of the digestive tract at the same time.
11263. Rinn, Roger C. (Mental Health Ctr, Huntsville, AL) **An inexpensive, portable, self-administered source for aversive stimulation: The rubber band.** *Behavioral Engineering*, 1975(Fal), Vol 3(2), 39.—Using wrist-worn rubber bands for self-administering an aversive stimulus to control an undesirable response (e.g., an urge to smoke or an obsessional ideation) has several benefits: it is nonhabituating, it may be used privately, and it shifts control of administration from therapist to client.
11264. Rosenthal, Robert. (Harvard U) **Estimating effective reliabilities in studies that employ judges' ratings.** *Journal of Clinical Psychology*, 1973(Jul), Vol 29(3), 342-345.—Suggests that in studies that employ judges' ratings, an increase in the number of judges employed should lead to a corresponding increase in the reliability of the mean of the judges' ratings; an evaluation of the Spearman-Brown result supports this idea. A table is provided that will aid in the rapid estimation of effective reliabilities in studies that employ judges' ratings.—*Journal summary*.
11265. Schad, H. & Seller, H. (Psychologisches Inst, Munich, W Germany) **A method for recording autonomic nerve activity in unanesthetized, freely moving cats.** *Brain Research*, 1975, Vol 100(2), 425-430.—Describes an improved method for recording sympathetic nerve activity in conscious animals. The new method includes low weight electrodes, consisting of only the free endings of 2 thin platinum wires around the renal nerve and insulation against the surrounding fluid and tissue using an inert form of silicone rubber. Data from cats show that potentials of 40-300 μ V could be recorded, in comparison with earlier methods that gave maximum potentials of 5-15 μ V.
11266. Stephenson, Gordon R.; Smith, Daniel P. & Roberts, Thomas W. (U Wisconsin, Madison) **The SSR System: An open format event recording system with computerized transcription.** *Behavior Research Methods & Instrumentation*, 1975(Nov), Vol 7(6), 497-515.—Describes a system that encodes the incidence, duration, coincidence, and sequence of entries in real time onto magnetic tape for subsequent high speed transcription by computer. The keyboard is light weight and battery powered for field as well as for laboratory applications. A completely open format and the flexibility of user defined software grammars facilitate the entry of subjects, actions (both momentary and continuous), objects, and other contextual information in whatever form the user requires. An application of the system to record drinking behavior in a troop of water-deprived monkeys to study the troop's social-rank structure is described. The SSR System is a system of ideas about the problems of encoding observations for computerized transcription and is embodied in a specific set of software and field tested hardware. The rationale for each major aspect of the system is presented in detail from a user's point of view.—*Journal abstract*.
11267. Vincent, Terry & Bradshaw, John. (Monash U, Clayton, Australia) **A simple device for the preparation of exactly aligned dichotic tapes.** *Behavior Research Methods & Instrumentation*, 1975(Nov), Vol 7(6), 534-538.—Notes that dichotic presentation of stimuli is useful in investigating several problems: selective attention, cerebral asymmetry, dysfunctions in reading and speech, short-term memory, and locus and extent of brain damage. The present paper describes a system involving 3 tape recorders and a control device whereby dichotic tapes can be prepared with onset alignment

accurate to a few milliseconds or to a measured asynchrony. The 2 channels are separately recorded in the speaker's own time, the only requirement being that the separate words be spoken with an interword interval of 350 msec or more, to provide sufficient time for starting and stopping the system. Details of components, circuits, and operating techniques are presented. —*Journal abstract.*

11268. von Easter, Lawrence. (U Oregon) **A Monte Carlo investigation of the error of estimate associated with six item-examinee sampling plans.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5711-5712.

11269. Wallnau, Larry & Greenfield, Norman. (State U New York, Albany) **Automated stimulus intensity control.** *Behavior Research Methods & Instrumentation*, 1975(Nov), Vol 7(6), 547-548.—Describes an apparatus permitting the study of preference for illumination in a barpress task. It is used with a 2-bar rat chamber.

11270. Weizenbaum, Joseph. (Massachusetts Inst of Technology) **Computer power and human reason: From judgment to calculation.** San Francisco, CA: W. H. Freeman & Co, 1976. xii, 300 p. \$9.95.—Criticizes the tacit current acceptance of the view that computers and man are species of the same genus and the growing tendency to try to solve problems as if man and society were machines. Detailed analysis is offered of what computers can do, what they cannot do, and what they should not be used to do.

11271. Wolach, Allen H.; Roccaforte, Peter & Breuning, Stephen E. (Illinois Inst of Technology, Chicago) **Tape recording data for a cumulative recorder and for programming interval schedules.** *Behavior Research Methods & Instrumentation*, 1975(Nov), Vol 7(6), 545-546.—Describes a simple method for recording discrete events with a cassette tape recorder. Since the converter for the recorder is inexpensive, data for several Ss can be recorded simultaneously. The recorder-converter can also be used to program interval schedules. Cassette recorded responses for an S can be played into a cumulative recorder.—*Journal abstract.*

11272. Wolach, Allen H.; Roccaforte, Peter; Van Berschot, Sylvia N. & McHale, Maureen A. (Illinois Inst of Technology, Chicago) **Converting an electronic calculator into a combination stopwatch-calculator.** *Behavior Research Methods & Instrumentation*, 1975(Nov), Vol 7(6), 549-551.—Details the components, circuits, and method for adding electronic stopwatch capabilities to a calculator. Using this apparatus, a test administrator can time an S on various tasks with the stopwatch and then total the S's score with the calculator.

PSYCHOMETRICS

11273. Bardis, Panos D. (U Toledo) **Research instruments for population studies.** *Society & Culture*, 1974(Jul), Vol 5(2), 177-191.—Presents in detail 2 types of pencil and paper tests: (a) tests of knowledge about sexual intercourse, pregnancy, menstruation, and sex physiology; and (b) an attitudinal test dealing with vasectomy.—A. D. Horowitz.

11274. Battermann, Michele M. (U California, Berkeley) **Worst wrong answer scoring as a means of identifying guessing on multiple-choice tests.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5704.

11275. Craddick, Ray A. (Georgia State U) **Sharing oneself in the assessment procedure.** *Professional Psychology*, 1975(Aug), Vol 6(3), 279-282.—Discusses the importance of "sharing" in any psychological assessment procedure. Traditionally, the client has been expected to share his thoughts, ideas, fantasies, and responses with the examiner, and only slight attention was given to the examiner's affect as it related to the client's responses. Emphasis is placed on mutuality of a "sharing framework" in the assessment procedure itself. In this sharing of oneself, one must leave himself open to the other; this process involves a relationship of trust as well as openness. Such openness and trust then establishes a sense of worthiness in the client as well as the examiner, permitting both to give their best to the assessment procedure.—*Author abstract.*

11276. DuBois, Bernard & Burns, John A. (Northwestern U) **An analysis of the meaning of the question mark response category in attitude scales.** *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 869-884.—Argues that, although most scaling formats include an intermediate or neutral response category, little research has been devoted to the analysis of the meaning respondents attach to this category. Results obtained from 10 different scales, administered to a total of 100 respondents, across 2 types of item formats (Likert and polar choice) support the traditional method of scoring the "?" answer. Although the meaning respondents imply when selecting the "?" is not more ambiguous than the meaning implied in the selection of the other response categories, there does exist evidence for the presence of a variety of uses of the "?" including response styles, ambivalence, and indifference. Various suggestions are made for further research and alternate methods of approach to the meaning of the question mark response category. (18 ref)—*Journal abstract.*

11277. Gelléri, Péter. [Analysis of the determination system of attitudes through mathematical model shaping: The methodology of research on political attitudes.] (Hung) *Magyar Pszichológiai Szemle*, 1974, Vol 31(2), 176-188.—Explains a variant of multivariate analysis—the steps involved, their meaning, and the sample size needed—and illustrates how the method was applied to a questionnaire on political attitudes that was used in an industrial setting. (Russian & English summaries)—F. Mester.

11279. Helvey, T. Charles. (Inst of Information & Control Systems, Tullahoma, TN) **Learning disability measurement with the synchrocephalograph.** *Journal of Experimental Education*, 1975(Fal), Vol 44(1), 18-25.—Describes a new testing method which can be used to screen learning-deficient children quickly, reliably, and inexpensively. To eliminate the difficulty of arriving at reliable individual test scores when they are matched

Test Construction & Validation

- against the means of large statistical sample space standards, the Bayes theorem and conditional probabilities are discussed. The synchrocephalograph, or neural efficiency analyzer, is composed of a brain wave amplifier with highly efficient noise filters, a special purpose mini-computer, a monitoring device to eliminate artifacts, and a headset with easily applicable electrodes. It provides essentially 2 encephalographic parameters, neural efficiency and hemispheric symmetry. The scoring, assessment, and age correction procedures are described. (29 ref)—*Journal abstract*.
11280. Janssen, Jan P. & Mommer, Ilse. (U Tübingen, Psychologisches Inst, W Germany) [The Motivation Analysis Test (MAT): Can it be faked?] (Germ) *Zeitschrift für Experimentelle und Angewandte Psychologie*, 1975, Vol 22(2), 218-240.—Rejected the usual procedure for finding out whether or not it is possible to fake motivation, a procedure which involves giving the same test under instruction to make a very good impression or under regular instructions. A sample of 40 applicants for drivers' license who could be assumed to be highly motivated to make a good impression in order to obtain the license was compared with a matched control sample. Statistically significant differences between the experimental and control groups were obtained. It is concluded that R. B. Cattell's statement that the MAT is completely objective and independent of the situation must be rejected. (English & French summaries) (30 ref)—*W. J. Koppitz*.
11281. Lunneborg, Clifford E. & Lunneborg, Patricia W. (U Washington, Seattle) Factor structure of the vocational interest models of Roe and Holland. *Journal of Vocational Behavior*, 1975(Dec), Vol 7(3), 313-326. Administered the Vocational Preference Inventory and Vocational Interest Inventory, based on interest models of J. L. Holland and A. Roe, respectively, to 235 college student volunteers. Analyses of interscale relations suggested that the 2-dimensional, circular configuration of occupational or personality types may be an oversimplification which impedes the understanding of the structure of vocational interests. For both interest models, 4 orthogonal dimensions seem necessary to capture interindividual variability: Social vs Technical, Organizational vs Outdoor, Science vs Business, and Artistic.—*Journal abstract*.

11290. Dennis, Donald M. (U Minnesota) Predicting full scale WAIS IQs with the Shipley-Hartford. *Journal of Clinical Psychology*, 1973(Jul), Vol 29(3), 366-368.—Compared several tables for the conversion of Shipley-Hartford (SH) Institute of Living Scale for Measuring Intellectual Impairment total scores to WAIS Full Scale IQs in a sample of 37 psychiatric outpatients (mean age, 39.2 yrs). M. J. Paulson and T. Lin's (see PA, Vol 45:4546) age-corrected table led to the best predictions as indicated by the highest correlation with actual Full Scale IQ (.79) and the smallest standard error of estimate (7.7). Additionally, it was discovered that the age-scaled table worked equally well at higher and lower SH levels, whereas the non-age-corrected tables led to insignificant correlations with actual Full Scale IQs for Ss with lower SH scores. Paulson and Lin's table probably is the most efficient way to use the SH as an estimator of WAIS IQ and enhances the value of the SH as a screening measure of intelligence.—*Journal summary*.
11291. Dill, John R. et al. (City Coll, City U New York) Sex role preference in Black preschool children using a modification of the IT Scale for Children. *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 823-828.—Used the facial features of the "IT" figure in the IT Scale for Children to measure sex-role preferences of 46 male and 47 female Black 4-6 yr olds. Data show that

the majority identified "IT" as their own sex. Significant differences were obtained between the present sample of Black males and those in a comparison sample. No differences existed between the present sample and the original normative White male sample. Black females in the present sample were as feminine as both the Black and White comparison samples. Results indicate that the facial features version is appropriate when using the IT Scale. Black Ss seemed to manifest sex-role preference similar to their White peers, although females' scores were more variable. Previous assumptions regarding the socialization of sex-role behavior of Black children are challengeable and must be reconsidered. (23 ref) —*Journal abstract.*

11292. Doyle, James A. (St Francis Coll, PA) **Comparison of Kirkpatrick's and Spence and Helmreich's attitudes toward women scales.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 878.—Substantially high correlations between scores on C. Kirkpatrick's Feminist-Antifeminist Belief-Pattern Scale and J. T. Spence and R. Helmreich's Attitudes Toward Women Scale of both male and female undergraduates suggest that both measures are tapping similar attitudinal patterns.

11293. Dunfee, Donald E. (U Wisconsin) **The development of an instrument to measure the morale of secondary school students.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7580.

11294. Erickson, David L.; Monaghan, Robert R.; Shew, Richard L. & Groves, David L. (North Carolina State U, Raleigh) **Progress in the development of branch correlation technique.** *Journal of Instructional Psychology*, 1975(Win), Vol 3(1), 35-38.—Presents findings from a validity test of the branch correlation questionnaire, a measure which attempts to identify the attitude type to which an individual belongs and the strength of membership in that type. In a study of attitudes toward wildlife, it was found that most of the 17 Ss had difficulty choosing between the 3 wildlife attitude types and in ranking the statements once a type was selected.

11295. Favero, Jane; Dombrower, Jule; Michael, William B. & Richards, Leo. (Glendora Unified School District, CA) **Interrelationships among 76 individual-administered tests intended to represent 76 different structure-of-intellect abilities and a standardized general intelligence test in a sample of 34 nine-year-old children.** *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 993-1004.—Intercorrelated and factor analyzed the scores of 76 individually administered structure-of-intellect (SOI) tests, constructed or selected to duplicate 76 hypothesized SOI abilities, and the scores on the verbal (V), nonverbal (NV), and the composite (C) scales of the Lorge-Thorndike Intelligence Tests (LT), Multi-Level Edition, administered to middle-class 9-yr-olds. The extent of overlap of SOI ability measures, their degree of relationship with the LT scales, and the possible presence of 2nd-order factors among the SOI tests were investigated. The values for the ranges and the average magnitudes of intercorrelation coefficients of SOI tests within single categories of the same operations, contents, or products dimension of the SOI model did not differ appreciably from those correspond-

ing values and magnitudes found between categories from different SOI dimensions. Data suggest a factor of general intellectual function; a weighted combination of 8-10 SOI ability tests could afford a valid representation of the complex of functions.—*Journal abstract.*

11296. Gilligan, John F. (U Idaho) **FIRO-B: Norms and reliability revisited.** *Journal of Clinical Psychology*, 1973(Jul), Vol 29(3), 374-376.—Norms and reliability data were established for 296 university freshmen on the Fundamental Interpersonal Relations Orientation-Behavior (FIRO-B). Means and reliability coefficients were lower than those given for a comparable group in the FIRO-B manual. Additional analyses of the overall scores, sums of all 6 scales, and the sums across the need areas provided the highest reliability coefficients. Data suggest that researchers can best use the FIRO-B by taking advantage of the higher correlations found in the overall scores (.81) and the sums of the wanted and expressed scales (.75).—*Journal summary.*

11297. Gynther, Malcolm D.; Altman, Harold & Sletten, Ivan W. (St Louis U) **Replicated correlates of MMPI two-point code types: The Missouri actuarial system.** *Journal of Clinical Psychology*, 1973(Jul), Vol 29(3), 263-289.—Compared over 3,400 MMPI protocols obtained from psychiatric inpatients in public mental health facilities with their mental status and preadmission descriptor ratings to derive empirical correlates of profiles clustered primarily by 2-point high codes. All findings were replicated on an independent sample, a methodological procedure that reduces the number of significant correlates but enhances the reliability and validity of the data. Results are presented in the form of interpretive summaries and statistical tables for combined code types (e.g., 2-7/7-2). Particular success was achieved for the High-F code type, which has not been described previously; notable failures occurred for the 3-4/4-3 and 4-6/6-4 code types. The actuarial method outlined appears to eliminate the rules, restrictions, and regulations that characterize other systems. No evidence to support the contention that correlates of 3-point code types differ from those of the parent 2-point code types was found. Also, absolute elevation had no discernable effect on correlates, although related code types did not always have exactly the same correlates, and it cannot be ascertained that in all cases sex will have no effect on the correlates. The advantages of this system for interpreting MMPI data in public psychiatric institutions are discussed. (48 ref)—*Journal summary.*

11298. Hamilton, J. Ogden. (Indiana U, Graduate School of Business) **Prediction of persistence and performance with the Hermans Prestatic Motivation Test.** *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 915-920.—H. J. Hermans's Prestatic Motivation Test, a questionnaire measure of achievement motivation, is easier to administer and to score than are its projective counterparts, the TAT and the French Test of Insight, and it need not be administered under controlled conditions. In 2 independent studies of its predictive validity, using a total of 65 undergraduates, Hermans's measure was positively related to persistence and to performance in academic examinations, both when the measure was used alone and when it was combined with the Mandler-Sarason

Test Anxiety Questionnaire as a measure of resultant motivation. Moreover, although Hermans's French Test of Insight was related to persistence as in earlier research, it was not related to Herman's measure. It is concluded that Hermans's questionnaire taps a psychological characteristic that is manifest in achievement directed behavior, but that this characteristic is something other than the achievement motive of the TAT.—*Journal abstract.*

11299. Harper, Frank B. (U Western Ontario, London, Canada) **The validity of some alternative measures of achievement motivation.** *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 905-909.—Two tests commonly used in research on achievement motivation, the TAT and the Test Anxiety Questionnaire, have been criticized for a number of shortcomings involving reliability, validity, and ease of scoring. The present study examined the retrospective validity of 2 alternate measures which appear to overcome many of the objections to the former tests. These alternate measures are the Need Achievement scale of the Personality Research Form and the Debilitating Anxiety scale of the Achievement Anxiety Test. An analysis of variance comparing the relative academic achievement of 2 samples of graduate students ($N = 636$) was performed through using high and low scoring comparisons on the 2 measures. Results show that academic achievement was significantly related to scores on the tests. The alternate measures are therefore recommended to researchers for further study of achievement motivation.—*Journal abstract.*

11300. Hodo, Gary L. (U Alabama) **Clinical validation of the factored MMPI.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5194.

11301. Hoey, Henry P. (California State U, Hayward) **The projected self-concept scale.** *Journal of Clinical Psychology*, 1973(Jul), Vol 29(3), 380-381.—In an attempt to assess some unreported aspects of self-concept, the heroes of TAT stories identified by 148 undergraduates were rated blindly on a 7-point scale. The resulting projected self-concepts did not correlate significantly with the Rosenberg Self-Esteem Scale or with Byrne's Repression Sensitization Scale. Apparently, the projected self-concept scale was able to circumvent defensive styles and yield information about self-concepts that is not equivalent to reported self-concepts. It remains to be determined whether the projective self-concept scale yields clinically valid information. *Journal summary.*

11302. Hoogstraten, Joh. & Christiaans, H. H. (U Amsterdam, Netherlands) **The relationship of the Watson-Glaser Critical Thinking Appraisal to sex and four selected personality measures for a sample of Dutch first-year psychology students.** *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 969-973. In reaction to an earlier publication by A. Simon and L. O. Ward (see PA, Vol 54 (6421) on the 1952 version of the Watson-Glaser (W-G) Critical Thinking Appraisal, the present study examined the relationship of the 1964 forms of the same instrument to 4 selected noncognitive measures for a sample of 190 undergraduates. Except for Subtest 5, Evaluation of Arguments, subtest and total score means were significantly lower for Form ZM than for Form YM. Reliabilities of the

subtests ranged from only .22 to .69. Total score reliability estimates, however, were .72 (ZM) and .77 (YM). No sex differences were found. The correlation between the W-G total scores and those on the extraversion-introversion measure was not significant. Correlations of the W-G measure with other personality characteristics (neuroticism and rigidity) were also close to zero. As for version ZM of the W-G measure, the performance was significantly associated with test-defensiveness.—*Journal abstract.*

11303. Jensen, Joan M.; Michael, Joan J. & Michael, William B. (California State U, Long Beach) **The concurrent validity of the Primary Self-Concept Scale for a sample of third-grade children.** *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 1011-1016.—Estimated the reliability for the 8 factor scales of the 24-item Primary Self-Concept Scale (PSCS) obtained from 2 administrations to a sample of 83 3rd graders. Concurrent validity coefficients of the 8 scales also were determined relative to the same 8 factors on the Teacher Questionnaire (TQ) designed to reflect teachers' perceptions of children's behaviors in these 8 factor categories. Scores on 4 scales of the PSCS on its 1st administration and on 3 scales on its 2nd administration yielded statistically significant validity (ϕ) coefficients with scores on corresponding factor categories of the TQ.—*Journal abstract.*

11304. Kaufman, Alan S. & Hollenbeck, George P. **Factor analysis of the standardization edition of the McCarthy scales.** *Journal of Clinical Psychology*, 1973(Jul), Vol 29(3), 358-362.—Used portions of the normative sample data from 373 Ss for factor analyses of the standardization edition of the McCarthy Scales of Children's Abilities (MSCA) at ages 3, 5, and 7. At each of the 3 age levels, several different factor analytic techniques were used. The fact that each technique gave similar results within each age level supported the stability of the underlying structure of the MSCA. At each age level, General Cognitive, Memory, and Motor factors emerged, although the precise makeup of the Memory factor varied from age to age. Verbal, Quantitative, and Perceptual-Performance factors were also isolated, but these were not consistent across the age range. The factors found to characterize the standardization edition of the MSCA generally were similar to factors that have emerged in analyses of other children's cognitive test batteries. However, the MSCA structure also possessed a certain amount of uniqueness, particularly with regard to the noncognitive Motor factor, which appeared at all age levels.—*Journal summary.*

11305. Kumar, Santosh. (California Inst of Technology) **Reliability and validity of a cross-modal test of spatial ability.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 805-806.—The Space Relations subtest of the Differential Aptitude Test (DAT), the revised version of the Cross-Modal Test of Spatial Ability (adapted from the DAT), and a marker test for the cognition of figural transformation ability of J. P. Guilford's structure of intellect model were administered to 86 college freshmen. Using the Spearman-Brown formula, the reliability of the cross-modal test was .92. The validity coefficient of correlation between the DAT original and the adapted test was .75. The cross-modal test correlated .50 with the

cognition of figural transformation ability.—*Journal abstract.*

11306. Mlott, Sylvester R. (Medical U of S Carolina) **The Mini-Mult and its use with adolescents.** *Journal of Clinical Psychology*, 1973(Jul), Vol 29(3), 376-377.—Explored the relationship between the standard MMPI and the 71-item Mini-Mult with 75 male and female adolescent inpatients of a psychiatric unit of a university hospital. Results indicate that the error introduced by the short form tends to be relatively small and suggest that the Mini-Mult is applicable to inpatient adolescents. The 2 forms agreed closely in profile patterning, in diagnostic formulation, and in revealing various forms of psychopathology in approximately 91% of the cases.—*Journal summary.*

11307. Ollendick, Duane G.; Murphy, Michael J. & Ollendick, Thomas H. (Indiana State U) **Peabody Individual Achievement Test: Concurrent validity with juvenile delinquents.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 935-938.—Examined the concurrent validity of the Peabody Individual Achievement Test with the Wide Range Achievement Test and WISC in 18 12-16 yr old male incarcerated delinquents. Intercorrelations between subtests of the 1st 2 tests were significant, as was the Peabody Achievement Total Test with the WISC Full Scale IQ. However, the 2 achievement measures agreed in terms of gross intellectual classification less than 56% of the time on all subtests. As the Peabody Achievement subtest, Mathematics, vs Wide Range subtest, Arithmetic, yielded significantly different achievement levels, the 2 were not measuring comparable achievement levels. Substitution of one for the other is questionable. Suggestions are made for research concerning concurrent validity employing the present methodology.—*Journal abstract.*

11309. Pattie, Anne H. & Gilleard, Christopher J. (Clifton Hosp, York, England) **A brief psychogeriatric assessment schedule: Validation against psychiatric diagnosis and discharge from hospital.** *British Journal of Psychiatry*, 1975(Nov), Vol 127, 489-493.—Presents findings of part of an investigation which is designed to establish the validity of the Clifton Assessment Scale (a brief psychogeriatric assessment procedure) and the Stockton Geriatric Rating Schedule. 100 consecutive admissions over age 60 were assessed soon after admission to the acute wards of a psychiatric hospital. Results indicate a close relationship between the scores and psychiatric diagnoses. Outcome was differentiated in terms of discharge home or of transfer to psychogeriatric and to other nonpsychogeriatric wards, and significant differences were obtained between groups. The assessment procedure had predictive validity comparable with other reported procedures, with the advantages of brevity and test acceptability for an elderly population.—*Journal abstract.*

11310. Perney, Jan. (Boston Coll) **The development and validation of the Student Opinion Inventory factor scales.** *Educational & Psychological Measurement*,

1975(Win), Vol 35(4), 983-986.—Describes the development of the Student Opinion Inventory (SOI), an instrument designed to measure attitudes of students in secondary schools toward several aspects of their schools. An investigation was conducted with 367 high school students to determine the concurrent validity of the SOI factor scales and to examine the reproducibility of the reliability estimates found in pilot studies of the instrument. Responses to the SOI indicated that 5 of the 6 factor scales possessed some concurrent validity. Furthermore, the obtained reliabilities of the factor scales were relatively high for attitudinal measures and closely reproduced reliability estimates established by the final pilot study of the instrument.—*Journal abstract.*

11311. Poole, M. Julianna. (U Rochester) **The development of a Spanish language version of the Slosson Intelligence Test.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1509.

11312. Price, Lewis & Eliot, John. (U Maryland) **Convergent and discriminant validities of two sets of measures of spatial orientation and visualization.** *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 975-977.—Responses from 39 high school sophomores to the Eliot-Price tests of spatial orientation and visualization and to the Guilford-Zimmerman Aptitude Survey were evaluated in terms of the multitrait-multimethod matrix technique. The Eliot-Price tests met all criteria for convergent and discriminant validity. However, the Guilford-Zimmerman tests did not meet one of the criteria for discriminant validity. It is concluded that the Eliot-Price tests appear to be more nearly precise measures of spatial orientation and visualization.—*Journal abstract.*

11313. Rivera, Felipe U. (Catholic U of America) **The Bender Gestalt test among Mexican children.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1536.

11314. Rodgers, Robert F. & Goodman, Jay. (Ohio State U, Office of Student Services) **The development of a residence-hall counselor evaluation scale.** *College Student Personnel*, 1975(Sep), Vol 16(5), 400-404.—Describes the development, rationale, and reliability and validity evaluation of a 24-item attitude scale for measuring the effectiveness of student residence hall counselors. Correlational data on the instrument's relationship to the Adjective Check List and the Fundamental Interpersonal Relations Orientation-Behavior scale are presented, self-report and rating-others forms are described, and differences between different types of residence hall counselors are identified. (15 ref)

11317. Seay, Thomas A. & Riley, F. Terrill. (Kutztown State Coll) **A preliminary validation of an instrument to measure the degree of counselor restrictive-nonrestrictive cognitive orientation.** *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 921-928.—Defines the restrictive-nonrestrictive dimension of counseling

which refers to a holistic orientation for experiencing life by the receptivity toward the processing of and responding to sources of internal and external stimuli. To establish validity for the Counselor R Scale, which measures cognitive functioning along this dimension, 111 counselor trainees in a training program designed to produce open and humanistic counselors were compared on this Scale. The Rokeach Dogmatism Scale was included for analysis, since it was thought to be a component of the restrictive-nonrestrictive dimension. In the use of a 2×4 analysis of variance design for unequal n 's, the study provided data supporting the hypothesis that counselors in different phases of their training would differ in their scores on the Counselor R Scale. As a trainee progresses through a humanistically oriented training program, he or she can be expected to move from the restrictive to the nonrestrictive ends of the measured dimension.—*Journal abstract.*

11318. Stewart, David W. & Griffith, G. M. (Central Louisiana State Hosp, Pineville) **Factor analysis of Zuckerman's Sensation-Seeking Scale.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 849-850.—A principal components analysis of undergraduates' scores on the Sensation-Seeking Scale IV followed by a varimax rotation provided some support to the factorial validity of some of M. Zuckerman's subscales. It is suggested that the dimensions of sensation seeking were arbitrarily limited in earlier work on the problem.

11319. Szegedi, Márton. (Simmelweis Orvostudományi Egyetem, Budapest, Hungary) **[A statistical validity examination of Raven's Intelligence Test by a Hungarian random sampling.]** (Hung) *Magyar Pszichológiai Szemle*, 1974, Vol 31(2), 194-201.—Investigated 300 residents of Budapest, ages 15-60 yrs, who formed a representative sample of the Budapest population, using the original Raven's Progressive Matrices. Measurement inaccuracies arising from the present-day use of the test will be corrected through the ongoing standardization process. (Russian & English summaries)—*F. Mester.*

11320. Taylor, L. J. (Memorial U, Inst for Research in Human Abilities, St Johns, Canada) **The Peabody Picture Vocabulary Test: What does it measure?** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 777-778.

Administered the Peabody Picture Vocabulary Test (PPVT), Form A, the Wechsler Preschool and Primary Scale of Intelligence, and the Illinois Test of Psycholinguistic Abilities individually to 133 lower-socioeconomic-status kindergartners and 1st graders from Newfoundland and Labrador. Pearsonian correlations and factor analyses of PPVT scores were performed in relation to results from the other 2 measures. Results indicate that the PPVT is not an adequate measure of either linguistic or intellectual abilities and should be used, at best, only as a supplementary tool.—*B. McLean.*

11321. Tiedermann, Joachim. (Pädagogische Hochschule Niedersachsen, Abteilung Hannover, W Germany) **[Assessing constructive validity of school readiness tests.]** (Germ) *Zeitschrift für Entwicklungspsychologie und Pädagogische Psychologie*, 1974, Vol 6(4), 281-294. Explored the concept of school readiness by testing 2 hypotheses concerning construct validation: test scores are (a) resistant to learning and (b) independent of intelligence. Empirical evidence is presented which fails

to support either hypothesis. It is concluded that school readiness tests are inadequate to explain the basic concept of readiness and that test results represent actual learning capacity. The implications of these results with respect to readiness are discussed. (English summary) (44 ref)—*R. Scott.*

11322. Tokar, Edward B. & Stofflet, Frederick. (Norfolk Public Schools, VA) **The validity of the SRA Achievement Series, Multilevel Edition: Reading, Language Arts, and Arithmetic subtests for minority and non-minority group fourth grade pupils.** *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 1029-1031.—Obtained significant positive correlations, with 1 exception, between ratings of 92 4th graders by teachers on a 3-point scale and scores on the Reading, Language Arts, and Arithmetic subtests of the Science Research Associates (SRA) Achievement Series, Multilevel Edition (Blue Form E). Results suggest that these subtests would be valid measures of group academic achievement by both minority and nonminority children. A nonsignificant correlation between SRA Reading and teacher's rating of minority group S reading achievement suggests a need for further investigation. Correlations between SRA subtest scores and teacher's ratings ranged from .20 to .57 for minority group Ss and from .46 to .55 for nonminority group Ss.—*Journal abstract.*

11324. Woodbury, Roger & Shurling, James. (Wilson County Technical Inst, NC) **Factorial dimensions of the Jesness Inventory with Black delinquents.** *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 979-981.—Identified the personality dimensions in the Jesness Inventory among 250 adjudicated Black delinquent males (mean age = 14.6 yrs). A principal components factor analysis with a varimax rotation identified 3 factors: self-estrangement, social isolation, and immaturity. The proportions of total common-factor variance accounted for by the 3 factors were .511, .286, and .203, respectively. Results suggest that the factors might be a part of a larger alienation construct in Black delinquents.—*Journal abstract.*

11325. Wotruba, Thomas R. & Price, Karl F. (San Diego State U) **Relationships among four measures of achievement motivation.** *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 911-914.—Two new paper-and-pencil tests of achievement motivation developed by H. J. Hermans (1970) and by A. Mehrabian (1968) were examined to determine whether they might be comparable to 2 older measures, the TAT Need Achievement scale and the Achievement scale of the EPPS. The 4 measures were administered to 65 undergraduates. Although the results reflect a modest (.30) correlation between the Hermans and the TAT, no other significant correlations among pairs of the 4 achievement measures were found. Results lend support to past findings that the various achievement measures would appear to be measuring dissimilar constructs.—*Journal abstract.*

11343. **Gardner, Rick M.; Beltramo, Janelle S. & Krinsky, Richard.** (U Southern Colorado) Pupillary

changes during encoding, storage, and retrieval of information. *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 951-955.—Six undergraduate volunteers were each auditorily presented 6 lists of 7-digit numbers for retention intervals of 0, 5, and 10 sec. Pupil size was recorded during stimulus presentation, retention interval, and recall of items. Results indicate that pupil dilation occurred during encoding and retrieval of stimulus items. Pupillary constriction was found during the retention interval when rehearsal was presumed to occur.—*Journal abstract*.

11344. Ohlsson, Monica; Sjöberg, Hans & Dornič, Stanislav. (U Stockholm, Inst of Applied Psychology, Sweden) **Effects of physical fitness on mental performance after physical work.** *Reports from the Institute of Applied Psychology, U Stockholm*, 1975, No 62, 8 p.—Two groups of 20-38 yr old college students with different levels of physical fitness (24 well-trained and 24 less well-trained males) performed a serial mental task immediately after physical work of 5 different degrees of difficulty. The task included high information load, placing great demands on continuous concentration, switching of attention, and sensory (short-term) memory. The physically more fit group performed significantly better (committed markedly less errors) than the less fit. Results indicate that the former group could better resist the negative aftereffects of physical effort, in spite of the fact that the relative physical work load levels were the same for both groups. (17 ref)—*Journal abstract*.

11345. Warm, Joel S.; Stutz, Robert M. & Vassolo, Pamela A. (U Cincinnati) **Intermodal transfer in temporal discrimination.** *Perception & Psychophysics*, 1975(Oct), Vol 18(4), 281-286. Attempted to determine whether training for accuracy in temporal discrimination would transfer across sensory modalities. A fractionation method was used in which 60 18-27 yr old males bisected the durations of acoustic and visual signals at 3 standard intervals (6, 12, and 18 sec). Absolute error was the performance index. Half of the Ss were trained with acoustic stimuli and then tested in vision; the remainder were trained in vision and tested in audition. Similar negatively accelerated acquisition functions were noted for both modalities. Positive intermodal transfer, characterized by symmetry across modalities, was obtained at all standard durations. Results are considered to provide support for the notion that a common mechanism underlies temporal discriminations in different sensory systems. (28 ref)—*Journal abstract*.

Perception & Motor Processes

11346. Alegria, Jesus. (Universite Libre de Bruxelles, Lab de Psychologie Experimentale, Belgium) **Sequential effects of foreperiod duration as a function of the frequency of foreperiod repetitions.** *Journal of Motor Behavior*, 1975(Dec), Vol 7(4), 243-250. An examination of sequential effects of foreperiod duration in reaction time (RT) tasks suggests a description of the Ss' strategy in terms of a tendency to expect foreperiod repetitions. The present experiment examined what factors influence this basic tendency using 6 university students. Two foreperiod distributions differing in the frequency of repetitions (33 and 66%) but with the same frequency of individual foreperiods were used. In both

cases faster RTs coincided with foreperiod repetitions. Important differences appeared, nevertheless, between the 2 foreperiod distributions; RTs for repetitions were faster when repetitions were frequent than when they were not, and repetitions of the same foreperiod more than once led to further RT decreases only when foreperiod repetitions were frequent. The tendency to expect repetitions varied from trial to trial in a way which depended on long-term factors such as the frequency with which the expected foreperiod duration coincided with the foreperiod actually presented.—*Journal abstract*.

11351. Gray, Clyde T.; Gray, Cynthia R. & Lochlin, John C. (California State U, Los Angeles) **Time perception: Effects of introversion-extraversion and task interest.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 703-708.—Selected 32 highly extraverted and 32 highly introverted female college students from 600 who were administered the Maudsley Personality Inventory. Ss rated the interest value and estimated the duration of 3-min intervals filled with reading. There were 3 dull and 3 interesting readings. It was hypothesized that time perceptions of extraverts and introverts would differ when their interest in the task was dissimilar. However, no personality differences in time perception and few in interest were found; both extraverts and introverts

judged the intervals to be shorter when the reading was interesting.—*Journal abstract.*

11352. Hall, Molly J.; Bartoshuk, Linda M.; Cain, William S. & Stevens, Joseph C. (Yale U) **PTC taste blindness and the taste of caffeine.** *Nature*, 1975(Feb). Vol 253(5491), 442-443.—Measured the taste thresholds of 10 undergraduates sensitive to the bitter substance phenylthiourea or phenylthiocarbamide (PTC), designated "tasters," and 10 less sensitive Ss, designated "nontasters" or "taste blind." Thresholds were measured for 5 compounds: PTC, QHCl, urea, caffeine, and NaCl. Ss sorted the substances, presented in decreasing concentrations, into 2 groups, those with taste and those without, and assigned numbers proportional to the perceived intensity of the stimuli. For both groups of Ss, thresholds for both PTC and caffeine showed bimodal distribution, and caffeine thresholds were correlated with PTC thresholds ($r = .83, p < .001$). None of the other substances produced these results. These and other findings are discussed as they relate to other studies and to problems of multiple taste receptor sites, sensory coding, and taste sensitivity to caffeine. (17 ref)—*J. Davis.*

11353. Hallett, P. E. & Lightstone, A. D. (U Toronto, Inst of Biomedical Engineering, Canada) **Saccadic eye movements to flashed targets.** *Vision Research*, 1976(Jan), Vol 16(1), 107-114.—A target presented as a flash in darkness, before, during, or after a saccade in 2 Ss with normal visual acuity, elicited a subsequent goal-directed saccade of normal amplitude and appropriate latency. In a flashed target variation of the Wheelless paradigm, "cancellation time" was not observed in circumstances where the 1st target was believed to be ineffective. Latency was approximately the same whether target steps were synchronized to saccades or not. Little or no processing for a primary saccade occurred before the prior primary saccade. (French & German summaries) (16 ref)—*Journal abstract.*

11354. Hallett, P. E. & Lightstone, A. D. (U Toronto, Inst of Biomedical Electronics, Canada) **Saccadic eye movements towards stimuli triggered by prior saccades.** *Vision Research*, 1976(Jan), Vol 16(1), 99-106.—In an experiment with 2 Ss with normal visual acuity, the beginning of a saccade triggered a step in target position, and then the target was extinguished 1-300 msec later. A primary saccade followed with normal accuracy and approximately normal latency. A corrective saccade to the invisible target was possible if the target was lit during the early part of the prior primary saccade. It is concluded that important visual stimulation can occur during saccades, and the interaction of retinal and eye position information is such that saccades are goal-directed. The only finding reminiscent of perceptual "saccadic suppression" and mislocation effects is that a target which steps to a position ahead of a saccade is sometimes ignored. (French & German summaries) (36 ref)—*Journal abstract.*

11355. Heller, Morton A. & Levanthal, Gloria. (William Paterson Coll) **Delay in retention of forms.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 903-906.—10 forms were drawn on the palms of 48 undergraduate volunteers who were without vision. Ss were then required haptically to explore 3 forms and choose the

drawn shape. Three intervals—0, 5, and 15-sec—were inserted between the presentation of the drawn form and the choice. It was expected that there would be a decline in the accuracy of form recognition with an increase in delay. Form recognition was significantly superior with no delay, and loss of shape information seemed to occur rather quickly, since there was no significant difference in the accuracy of form recognition between the 2 longer delays.—*Journal abstract.*

11356. Hogan, Harlin W. (Tulane U) **Comparative time perception as a function of stimulus complexity, extraversion, need for achievement, and social class.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 7329.

11357. Kutas, Marta; McCarthy, G. & Donchin, E. (U Illinois) **Differences between sinistrals' and dextrals' ability to infer a whole from its parts: A failure to replicate.** *Neuropsychologia*, 1975(Oct), Vol 13(4), 455-464.—Attempted to replicate an experiment by R. D. Nebes (1971) which suggested that left- and right-handed Ss differ in perceptual abilities. In 3 experiments, a total of 102 undergraduates were administered Nebes' arc-circle test, in which Ss examine an arc with their fingers and identify to which of 3 circles the arc belongs. In all 3 studies the differences predicted by Nebes between the ability of sinistral and dextral Ss were not found. Furthermore, the performance on the task did not depend on the mode of response (pointing to vs naming of the correct circle). (25 ref)—*Journal abstract.*

11358. Luchins, Abraham S. & Luchins, Edith H. (State U New York, Albany) **Wertheimer's seminars revisited: Problems in perception.** I. Albany, NY: State U New York, Dept of Psychology Reports, 1972. 327 p.—Presents the 1st of the series of volumes that reconstruct M. Wertheimer's seminal seminars on perception. Simple problems and demonstrations are presented to illustrate some of the now classical issues that Gestalt psychology raised in its revolt against traditional psychology.

11359. Magill, Richard A. & Powell, Frank M. (Texas A&M U) **Is the reaction time-movement time relationship "essentially zero"?** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 720-722.—Hypothesized that, if reaction-time-movement-time (RT-MT) correlations are essentially zero, then the magnitude of that correlation should not be subject to variation due to the manipulation of various experimental variables. 18 male and 18 female undergraduates were tested with either RT-MT together or done separately. Results indicate significant relationships for males but not for females. The "essentially zero" position is discussed as being procedurally specific.—*Journal abstract.*

11360. Marcel, Tony & Rajan, Paul. (U Sussex, Lab of Experimental Psychology, Brighton, England) **Lateral specialization for recognition of words and faces in good and poor readers.** *Neuropsychologia*, 1975(Oct), Vol 13(4), 489-497.—Investigated perception of words and faces presented unilaterally to the right or left visual field in 40 7-9 yr olds. 5-letter words were presented in 1 session and unfamiliar faces in a 2nd session 1 wk later. In the 1st task good readers showed greater right-field superiority than poor readers. In the 2nd task, a left visual field superiority was demonstrated for faces, but

the extent of this asymmetry was not related to reading ability nor to the extent of lateral asymmetry in word recognition. It is concluded that the development of hemispheric specialization for verbal processing is unrelated to that for visuo-spatial processing and while the former affects reading proficiency the latter does not. (French & German summaries) (21 ref)—*Journal abstract*.

11361. Murakami, Takashi. (Tokyo U of Education, Japan) [Individual difference and response variability in magnitude scale and category scale of weight.] (Japn) *Japanese Journal of Psychology*, 1975(Aug), Vol 46(3), 142-151.—Magnitude scales with 3 different moduli and a processed category scale of weight were constructed for each of 12 Ss using 13 stimuli ranging from 13 gm to 200 gm. A 2-stimulus 2-response identification experiment was also performed. Individual magnitude scale and category scale were approximated by power function and logarithmic function, respectively, although slight but nonnegligible deviations and individual difference existed. The variabilities of these 2 scales were in the same order while the variabilities in identification experiment were remarkably small. Power law exponents were independent of these variabilities.—*English abstract*.

11362. Pargman, David; Bender, Peter & Deshaies, Paul. (Florida State U) **Correlation between visual disembedding and basketball shooting by male and female varsity college athletes.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 956.—Correlated the Group Hidden Figures Test scores of varsity basketball players with the seasonal field-goal and free-throw shooting efficiency of each S. Test scores were not significantly correlated with either percentages of free throws or field goals.

11363. Price, Kenneth P. & Tursky, Bernard. (State U New York, Stony Brook) **The effect of varying stimulus parameters on judgments of nociceptive electrical stimulation.** *Psychophysiology*, 1975(Nov), Vol 12(6), 663-666.—Tested the effect of varying duration and increment of step-increase of electrical stimulation on the reliability and interjudgment predictability of subjective nociceptive judgments (discomfort, pain, and tolerance). Ss were 12 male undergraduates. Differences in mA levels for the nociceptive judgments were consistent but small in comparison to the changes in step and duration. Previous findings related to reliability and predictability of the judgments were confirmed, and the implications of these findings for the use of electrical stimulation as a pain stimulus are discussed. *Journal abstract*.

11365. Smith, John G. (U Southern California) **Retrospective interference in motor short-term memory: A test of Pepper and Herman's hypothesis.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5696.

11366. Smoll, Frank L. (U Washington, Seattle) **Between-days consistency in personal tempo.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 731-734.—Between-days performance of repetitive movements at a

self-paced tempo was studied in 60 undergraduate volunteers. Ss performed an accuracy task involving successive arm swings at an individually chosen tempo on each of 2 consecutive days. Between-days correlations for Ss' selected tempos of performance and within-S variance in motor response times indicated that personal tempo is at least a moderately stable attribute.—*Journal abstract*.

11367. Summers, Jeffery J. (U Melbourne, Parkville, Australia) **The role of timing in motor program representation.** *Journal of Motor Behavior*, 1975(Dec), Vol 7(4), 229-241.—Attempted to determine the degree to which the timing and sequencing components of a motor skill are related in motor-program representation in a serial keypressing task. 40 Ss in 4 equal groups practiced on event sequences varying in the form of the inherent temporal structure. Following training Ss attempted to execute the event sequences from memory as quickly as possible where the maintenance of the inherent temporal structure was not required. Under speed instructions the entire sequence was speeded up, but performance was still strongly influenced by the overall temporal structure acquired during training. Results suggest that the relative timing of events is an integral part of motor program representation, particularly in skills involving rhythmic timing structures. (18 ref)—*Journal abstract*.

11368. Varney, Nils R. & Benton, Arthur L. (U Iowa, Neurosensory Ctr) **Tactile perception of direction in relation to handedness and familial handedness.** *Neuropsychologia*, 1975(Oct), Vol 13(4), 449-454.—Investigated the accuracy of perception of the direction of tactile stimulation of brief duration applied to the palms of the hands in relation to hand preference and familial background in 102 normal college students. Perception of direction was significantly more accurate on the left hand than on the right in right-handed Ss. Left-handed Ss showed no trend toward superior performance on either hand. Familial handedness background was a significant and independent determinant of lateral pattern of performance. Right-handed Ss with a purely dextral familial background showed clear superiority on the left hand while those who had a left-handed parent showed no lateral asymmetry in performance. Left-handed Ss with right-handed parents showed no lateral asymmetry in performance but those with a left-handed parent showed clear superiority on the right hand.—*Journal abstract*.

11369. Yasui, Syozo & Young, Laurence R. (California Inst of Technology) **Perceived visual motion as effective stimulus to pursuit eye movement system.** *Science*, 1975(Nov), Vol 190(4217), 906-908.—Eyetracking by 4 human Ss of a foveal afterimage during angular head oscillation in the dark produced smooth eye movements exceeding those for normal vestibular nystagmus and a reduction in the frequency of the fast phase component of nystagmus eye movements. Results support a closed loop extension of the corollary discharge theory, with oculomotor commands based on perceived object velocity.—*Journal abstract*.

11370. Zuckerman, Carl P. (Swarthmore Coll) **On perception.** New York, NY: Quadrangle, 1976. xviii, 490 p. \$15.—Assembles a number of the author's important

papers, written during 35 yrs of research, on perceptual adaptation and perceptual learning. A new and previously unpublished study concerning neutral color is included.

Visual Perception

11371. **Abresch, Johannes & Sarris, Viktor.** (Technische U Aachen, W Germany) **Anchor effects and figural aftereffects: A comparative psychophysical investigation.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 791-796.—Perceptual contrast effect was studied as a special anchor effect in Exp I and as a special figural aftereffect in Exp II. The influence of stimulus onset asynchrony on contrast and assimilation effects, induced and measured by different psychophysical methods, was investigated in a total of 252 14-15 yr old students. Stimuli were circular beams of light projected on screens (Delboef type of illusion). When anchor and series stimuli were shown and the latter were judged by means of a rating scale, stimulus onset asynchrony had no substantial influence on the contrast effect (Exp I). When the constant method was applied, the asynchrony altered considerably the shape of the contrast effect (Exp II). (15 ref)—*Journal abstract.*

11372. **Andriessen, J. J. & Bouma, H.** (Inst voor Perceptie Onderzoek, Eindhoven, Netherlands) **Eccentric vision: Adverse interactions between line segments.** *Vision Research*, 1976(Jan), Vol 16(1), 71-78.—Examined adverse interactions between line stimuli in eccentric vision in a series of experiments with 2 normally seeing observers. Both contrast threshold and just noticeable difference of slant were measured for a test line as a function of the distance from a number of surrounding lines. Test lines were either parallel or perpendicular to the surrounding lines. Results show that interference affected both contrast threshold and just noticeable differences of slant with a clear-cut orientational specificity. The surprising result is the extensive spatial range of the interference. It is concluded that large-distance interference limits eccentric spatial vision in daily life much more than classic visual acuity limits would indicate, and makes eccentric vision probably quite different from "unfocused" foveal vision. (31 ref) *Journal abstract.*

11373. **de Weert, C. M. & Levelt, W. J.** (Psychologisch laboratorium der Katholieke U. Nijmegen, Netherlands) **Comparison of normal and dichoptic colour mixing.** *Vision Research*, 1976(Jan), Vol 16(1), 59-70. Dichoptic mixtures of equiluminous components of different wavelengths were matched with a binocularly presented "monocular" mixture of appropriate chosen amounts of the same color components. Three male Ss with normal color vision served in 2 experiments, and stimuli were chosen from the region of 490-630 nm. Although satisfactory color matches could be obtained, dichoptic mixtures differed from normal mixtures to a considerable extent. Midspectral stimuli tended to be more dominant in the dichoptic mixtures than either short or long wavelength stimuli. An attempt is made to describe the relation between monocular and dichoptic mixtures with 1 function containing a wavelength variable and an eye dominance parameter. (38 ref)—*Journal abstract.*

11374. **Destercke, H. P.** (U Louvain, Ctr de Psychologie Expérimentale et Comparée, Belgium) **[Measuring the stroboscopic effect as influenced by the two components of the period of stimulation.]** (Fren) *Archives de Psychologie*, 1974(Spr-Aut), Vol 42(167-168), 391-424.—Studied the spatial and temporal parameters of the perception of apparent movement by analyzing the thresholds obtained on several groups of observers. An electronic technique allowed the presentation of a sequence of points on a rectilinear trajectory 80 cm long. For the spatial parameter, there was an increase of threshold values (expressed in angular velocity) as a function of the increase of the observation angle. The influence of the temporal parameter was studied in terms of the duration of stimulation and of the interval between 2 successive stimuli. The interaction between these 2 durations can be considered in a single cyclic period and was registered in 2 types of stimulation: (a) when the duration of stimulation was kept constant, while the duration of intervals varied; (b) when a constant ratio was maintained between duration of stimulation and duration of interval. Results show that the influence of the temporal parameter is linked both with the distance between stimuli and with the type of stimulation. The inhibition and the summation of the effects of stimulation appear more clearly in the 2nd type. (20 ref)—*English summary.*

11375. **Drysdale, A. E.** (U Reading, England) **The movement after-effect and eye movements.** *Vision Research*, 1975(Oct), Vol 15(10), 1171.—Experimental examination of the significance of eye movements in the production of movement aftereffects (MAEs), undertaken directly by using a stabilized retinal image, suggest that the MAE is independent both of the test stimulus and of the eyes.

11376. **Finch, Dennis.** **Description of a new visual illusion: A drawing of a four-dimensional cube.** *Perception*, 1975, Vol 4(1), 111-113.—The visual responses evoked by an oblique projection of a 4-dimensional cube are discussed, and attention is drawn to the visual complexity and illusions evoked by this figure.

11377. **Frisby, John P. & Julesz, Bela.** (U Sheffield, England) **The effect of length differences between corresponding lines on stereopsis from single and multi-line stimuli.** *Vision Research*, 1976(Jan), Vol 16(1), 83-87.—The amount of depth seen by 2 practiced Ss in a random line stereogram composed of orthogonal corresponding lines steadily diminished as line length increased. The line length required to destroy stereopsis completely was the same regardless of the disparity incorporated in the stereogram. Results with multiline stimuli are discussed in connection with previous observations made with single-line stimuli. It is suggested that depth shift effects found with single lines can be explained by supposing that orthogonal line percepts fuse at their endpoints and that as line length is increased this results in an altered retinal disparity of the endpoints and hence a shift in apparent depth. The findings with multiline stimuli cannot be explained in this simple fashion and require a model of stereopsis which takes into account interactions between elements in complex displays.—*Journal abstract.*

11378. Gilliland, Kirby & Haines, Richard F. (Northwestern U) **Binocular summation and peripheral visual response time.** *American Journal of Optometry & Physiological Optics*, 1975(Dec), Vol 52(12), 834-839. —Attempted to determine whether binocular summation occurred to reaction time (RT) stimuli imaged across the horizontal retinal meridian. 6 males were administered a peripheral visual response time test to the onset of brief, small stimuli imaged in 10° arc separation intervals across the dark adapted horizontal retinal meridian under binocular and both monocular viewing conditions. Results indicate that from 50° arc right to 50° arc left of the line of sight binocular summation is a reasonable explanation for the significantly faster binocular data. The stimulus position by viewing eye interaction was also significant. A discussion of these and other analyses is presented along with a review of related literature. —*Journal abstract.*
11379. Gulick, W. Lawrence & Lawson, Robert B. (Hamilton Coll) **Human stereopsis: A psychophysical approach.** New York, NY: Oxford U Press, 1976. 292 p. \$15. —Briefly describes the major historical contributions to depth perception in humans, and presents the results of 10 yrs of psychophysical research on stereopsis as it relates to the perception of form, contour, translucency, and geometrical illusions. Included is a computer program that determines retinal disparities.
11380. Hoffman, James E. (U Delaware) **Hierarchical stages in the processing of visual information.** *Perception & Psychophysics*, 1975(Nov), Vol 18(5), 348-354. —Conducted an experiment with 4 undergraduates to determine the nature and temporal course of the interference provided by nonattended visual material. Ss' reaction times were measured for deciding which of 2 targets occupied the indicated position in 1 or 8 element displays. Placing replicas of the target in nonindicated display positions was equivalent to presenting the target alone. Members of the opposite response set produced maximum interference, while encodable and unencodable noise elements not belonging to a response set produced an intermediate decrement. For all display types, presenting the indicator prior to display onset decreased reaction time. Dividing each of the display elements into 2 parts and presenting the parts asynchronously provided evidence that Ss were indifferent to the presence of complete forms for the 1st 50 msec. Results are interpreted as supporting the existence of a hierarchical sequence of stages consisting of a preattentive stage which segregates the input into objects and an attentive stage which is likened to a spatial scanner responsible for synthesizing the crude preattentive features into recognizable forms. The concurrent operation of these stages provides for the redirection of attention when changes in the input are detected. (23 ref)—*Journal abstract.*
11381. Ikeda, Mitsuo & Takeuchi, Tetsuji. (Tokyo Inst of Technology, Japan) **Influence of foveal load on the functional visual field.** *Perception & Psychophysics*, 1975(Oct), Vol 18(4), 255-260. —The functional visual field defined in terms of a discrimination task of a target presented peripherally among ambiguous background patterns was investigated for various foveal loads which were to be recognized at the central retina; Ss were a total of 8 undergraduate and graduate students. Foveal loads were numbers, letters, place names, traffic signs, and other figures to simulate commonplace situations for foveal information processing. Boundaries of the functional visual field were obtained for simple fixation and for certain foveal loads. Comparison of these boundaries clearly showed shrinkage of the functional visual field size with the foveal loads of greater recognition difficulty. (26 ref)—*Journal abstract.*
11382. King-Smith, P. E. (U Manchester, Inst of Science & Technology, England) **Visual detection analysed in terms of luminance and chromatic signals.** *Nature*, 1975(May), Vol 255(5503), 69-70.
11383. Krulwitz, Judith E.; Warm, Joel S. & Wohl, Theodore H. (Iowa State U) **Effects of shifts in the rate of repetitive stimulation on sustained attention.** *Perception & Psychophysics*, 1975(Oct), Vol 18(4), 245-249. —The effects of shifts in the rate of presentation of repetitive neutral events (background event rate) were studied in a visual vigilance task. A total of 72 undergraduates in 4 groups experienced either a high (21 events/min) or a low (6 events/min) event rate for 20 min and then experienced either the same or the alternate event rate for an additional 40 min. The temporal occurrence of critical target signals was identical for all groups, irrespective of event rate. The density of critical signals was 12 signals/20 min. By the end of the session, shifts in event rate were associated with changes in performance which resembled contrast effects found in other experimental situations in which shift paradigms were used. Relative to constant event rate control conditions, a shift from a low to a high event rate depressed the probability of signal detections, while a shift in the opposite direction enhanced the probability of signal detections. 11384. Layton, Arthur & Chan, Gerald. (U California School of Optometry, Berkeley) **Retinal and post-retinal components of visual illusions.** *American Journal of Optometry & Physiological Optics*, 1975(Dec), Vol 52(12), 862-866. —Describes a technique which permits control of input of the various elements of a visual illusion to each hemiretina and each hemisphere. When the retinal effects and postretinal effects were added, the result was greater than the total illusory effect. This is believed due to the mixing between hemispheres via the corpus callosum, and suggests a possible means of assessing the role of the corpus callosum. —*Journal abstract.*
11385. Leechey, Susan C.; Moskowitz-Cook, Anne; Brill, Sarah & Held, Richard. (Massachusetts Inst of Technology) **Orientational anisotropy in infant vision.** *Science*, 1975(Nov), Vol 190(4217), 900-902. —In a study with 24 6-50 wk old infants, Ss preferred to look at horizontal and vertical gratings rather than at oblique gratings only when they were at or near threshold spatial frequencies, as would be expected if acuity for oblique edges is lower than that for horizontal and vertical edges. That such a bias was found as early as 6 wks of age suggests that the orientational asymmetry of the visual system depends on endogenous maturation rather than exposure to a carpentered world. —*Journal abstract.*
11386. Leibowitz, H. W.; Hennessy, R. T. & Owens, D. A. (Pennsylvania State U) **The intermediate resting position of accommodation and some implications for space perception.** *Psychologia*, 1975(Sep), Vol 18(3),

162-170.—Data obtained with the laser optometer demonstrate that when viewing through small pupils, in the dark, or while observing a clinical acuity test chart, accommodation is strongly influenced by the individual's resting position of accommodation. These data are interpreted as supporting the intermediate resting position hypothesis as opposed to the more traditional view that the relaxed eye is accommodated for optical infinity. It is suggested that the intermediate resting position hypothesis provides a simple and parsimonious explanation for night, instrument, and empty field "myopias" in all of which inappropriate accommodations is manifested. Data confirming this interpretation are presented for instrument myopia while viewing through a microscope. Methodological and theoretical implications are discussed. (21 ref)—*Journal abstract*.

11387. Masterson, Brooks & Kennedy, John M. (U Toronto, Scarborough, Canada) **Building the Devil's Tuning Fork.** *Perception*, 1975, Vol 4(1), 107-109.—Presents illustrations of a constructed, real object which is a perceptually correct, although unlikely, version of the "impossible" figure, the Devil's Tuning Fork. The physical construction resolves the incompatible depth cues which occur to a person viewing the impossible figure.

11388. McMichael, Ellen & McCarthy, S. Viterbo. (Regis Coll) **Visual search through words and nonwords in horizontal and vertical orientations.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 740-742.—In a repeated measurement design, 18 female college students searched for target letters in 18 lists of common words, rare words, and nonwords arranged either vertically or horizontally. The mean search time in seconds for 3 trials in each of 6 conditions was expected to be significantly slower for nonwords than for words and for vertical orientations than for horizontal. More importantly, a significant interaction was predicted between direction of search and the type of list searched. Results confirm earlier findings that the 2 main effects were significant; the significant interaction provides empirical evidence that consideration needs to be given to both intraword redundancy and direction of visual search.—*Journal abstract*.

11389. Mollon, John D. & Ross, Helen. (U Cambridge, Psychological Lab, England) **Gregory on the sun illusion.** *Perception*, 1975, Vol 4(1), 115-118.—Presents a translation of James Gregory's (1668) passage "On the apparent size of the horizon and zenith sun," taken from his text *Geometriae Pars Universalis*. The fact of the larger appearance of the sun, as well as its oblate shape, when it is on the horizon than when it is higher in the sky, and its explanation as a kind of perceptual distortion, are both accurate.

11390. Rentschler, Ingo; Hiltz, Rudolf & Grimm, Wolfgang. (Inst für medizinische Optik der U München, W Germany) **Processing of positional information in the human visual system.** *Nature*, 1975(Feb), Vol 253(5491), 444-445.—Conducted experiments in which each of 2 Ss was shown a test line (T), with an inducing (L) to the right or left of it. Both lines were vertical and luminous, but the relative luminosity and the distance separating them were experimentally varied. The S indicated the apparent position of T by aligning 2

luminous dots with it, one above and one below. Results indicate that the detection of line stimuli and the neural evaluation of their positions are performed separately in the human visual system. Findings are discussed and compared with those of other studies.—*I. Davis*.

11391. Runeson, Sverker. (U Uppsala, Sweden) **Visual prediction of collision with natural and nonnatural motion functions.** *Perception & Psychophysics*, 1975(Oct), Vol 18(4), 261-266.—Results of an earlier author-conducted study (see PA, Vol 54:2286) show that a movement with constant velocity looks fast in the beginning and later slows down, whereas a certain type of accelerated motion (natural motion) looks constant throughout. In the present study with 11 Ss, it was predicted that early occlusion of a constant motion would lead to overestimation of velocity whereas late occlusion would not; with natural motion there would be no such difference. Constant and natural motions together with constant deceleration and constant acceleration motions were tested in a modified prediction-of-collision experiment. Results support the predictions. It is concluded that the phenomena previously found were operative also in a more complex perceptual task where the S's attention was not focused on velocity directly. The visual system seemed to achieve perception of partly occluded motion by applying a natural motion function rather than constant velocity. Acquaintance with the phenomena did not seem to alter the way they were perceived.—*Journal abstract*.

11392. Solman, R. T. (Australian National U, Canberra) **Effect of target separation on selective attention.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 755-760.—Four paid undergraduates with normal vision performed a visual search task in which they searched circular stimulus displays for 2 instances of a prespecified target. When a comparison was made of the total number of targets correctly located at each separation, no significant differences were found, suggesting that, within the range of separations (maximum of 2.53°) examined, the selective processing of the relevant items was not influenced by the distance separating them. Assuming that the redundancy of target items increased the probability of a target being perceived, the differences between the number of 1st targets correctly located and the number correct in a single target condition, were in the predicted direction but failed to reach significance. (16 ref)—*Journal abstract*.

11393. Vassilev, A. & Mitov, D. (Bulgarian Academy of Sciences, Inst of Physiology, Sofia) **Perception time and spatial frequency.** *Vision Research*, 1976(Jan), Vol 16(1), 89-92.—The time of detection of a feature of square-wave gratings (orientation or a small difference in spatial frequency between 2 adjacent gratings) was studied as a function of stimulus spatial frequency. The relative perception time was measured by the reaction time method or by the method of masking, using 4 experienced emmetropic Ss (including the authors). Perception time increased at grating frequencies above 4-6 c/deg, the effect being partly due to the lower contrast sensitivity at these frequencies. However, a delay was also found when increased contrast at high frequencies compensated for the lower sensitivity. The result suggests the existence of a mechanism for

processing a high spatial frequency stimulus which demands more time than that for processing a low spatial frequency. (Russian summary) (20 ref)—*Journal abstract.*

11394. Vonèche, Jacques. (U Genève, Switzerland) [Mueller-Lyer revisited.] (Fren) *Archives de Psychologie*, 1974(Spr-Aut), Vol 42(167-168), 381-389.—The Mueller-Lyer illusion can be separated into 2 adjacent and competing stimuli, "length" and "area." By using a model combining these 2 stimuli which assumes equality of force at $\Theta = 45^\circ$, a method was devised for predicting the dimensions of the Mueller-Lyer complementary figure. This was confirmed by experiment. It is believed that the occurrence of maximal Mueller-Lyer illusion at $\Theta = 30^\circ$ can also be predicted, or at least accounted for by using this approach. (German summary)

11395. Vonèche, Jacques. (U Genève, Switzerland) [Remarks on the theory of lateral inhibition.] (Fren) *Archives de Psychologie*, 1974(Spr-Aut), Vol 42(167-168), 473-489.—Critically reviews lateral inhibition theory, which is considered as the paradigm of the energetic approach to perception. This approach is characterized by a static analysis of brightness distribution on the retina. A new geometric approach, based essentially on dynamic transformations of figures, is proposed. (German summary) (3 p ref)

11396. Weisstein, Naomi; Ozog, Gregory & Szoc, Ronald. (State U New York, Buffalo) A comparison and elaboration of two models of metacontrast. *Psychological Review*, 1975(Sep), Vol 82(5), 325-343.—Metacontrast has been the subject of 2 neural network simulations by N. Weisstein (see PA, Vol 43:6482) and by B. Bridgeman (see PA, Vol 47:8008). The present article compares and elaborates on the 2 models, corrects flaws not inherent in the models' conceptualizations, and discusses the remaining shortcomings. The idea behind how U-shaped metacontrast functions are generated is similar in both models, but the assumptions about how the visual system is organized are quite different. In one of the models temporal ringing, combined with a complex and implausible linking hypothesis, is necessary in order for masking to be obtained; this model assumes a single spatial and temporal channel. In the other model, masking does not depend on temporal ringing; this model assumes multiple spatial and temporal channels and a simple linking hypothesis. It is shown that of the 2 models only the 2nd adequately predicts empirical metacontrast functions, and this model is related to recent evidence that the visual system contains multiple channels. It is concluded that although it is sometimes treated as a puzzling and somewhat singular phenomenon isolated from the "mainstream" of visual data and theory, metacontrast may turn out to be one of the more interesting manifestations of a multiple-channel visual system. (49 ref)—*Journal abstract.*

11397. Wiedl, Karl H. (U Trier, Fachbereich I Psychologie W Germany) [The effects of the variables "exposure time" and "accentuation of preference," and of individual differences upon the study of preferences for complex visual figures.] (Germ) *Zeitschrift für Experimentelle und Angewandte Psychologie*, 1975, Vol 22(2), 316-346. Used D. I. Berlyne's arousal concept as the basis for experimental tests of the interaction

between exposure time and complexity of figures in judgments of figures as pleasant and/or interesting. 80 figures with operationally defined visual complexity, selected from previous studies, were presented to 219 high school students 17-19 yrs old. Different analyses of variances yielded significant effects for individual differences. The arousal concept explained the preferences only in a limited number of stimulus classes and in certain situations. (English & French summaries) (55 ref)—W. J. Kopitz.

11398. Youngs, William M. (Worcester Foundation for Experimental Biology, Shrewsbury, MA) The influence of perspective and disparity cues on the perception of slant. *Vision Research*, 1976(Jan), Vol 16(1), 79-82.—A rectangle rotated about its vertical axis provides many cues regarding its slant relative to the frontoparallel plane including linear perspective and binocular disparity. In the present experiment, 5 normally seeing undergraduates estimated the slant of stereoscopic targets containing one, both, or neither of these cues. Data analysis indicated, for figures with vertical contours separated by 3.80° horizontally, that perspective was the most effective cue to slant. Results are discussed in relation to R. B. Freeman's (1966, 1970) theory of slant perception. Further quantitative work concerning the functional relationship between contour separation and the effectiveness of the disparity code is suggested.—*Journal abstract.*

Auditory & Speech Perception

11399. Ahaus, W. H.; Stokinger, T. E. & Wylde, Margaret A. (VA Hosp, Oklahoma City, OK) Influence of duty cycle and off time of comparison-tone pulse trains on the measurement of perstimulatory loudness adaptation. *Perception & Psychophysics*, 1975(Oct), Vol 18(4), 287-292. Attempted to determine whether duty cycle and off time of tone pulses presented to the comparison ear influence adaptation measured at the opposite (test) ear. Eight Ss were adapted for 5 min to a 1-kHz pure tone at 60 db SPL. Using a tracking procedure, adaptation was measured under 5 comparison-signal conditions, each comprised of 1-kHz pulse trains having different on-off times. The on-off times (in msec) were 200-800 (20% duty cycle); 500-500, 200-200, and 800-800 (50% duty cycle); and 800-200 (80% duty cycle). Adaptation increased as the duty cycle of the comparison tones increased from 20% to 80%. This was evident even when attempts were made to account for the extent to which pulse trains were perceived as softer than continuous signals at the same level (the so-called LOT effect). For the 50%-duty-cycle conditions, similar amounts of adaptation were measured whether the on-off times of the signals were 200, 500, or 800 msec. (17 ref)—*Journal abstract.*

11401. Babbkoff, Harvey. (Bar-Ilan U, Ramat-Gan, Israel) Dichotic temporal interactions: Fusion and temporal order. *Perception & Psychophysics*, 1975(Oct), Vol 18(4), 267-272.—Conducted a study with 4 Ss to

investigate the discrimination of temporal order to dichotic temporal separations ranging over 1.8 log units. An experimental paradigm was used in which there was (a) a breakup of fused sound into 2 separately perceived stimuli and (b) a judgment of temporal order. A V-shaped function is used to describe the relationship of discrimination to interaural temporal asymmetry (Δt). The left segment of this function crossed the 75% discrimination level at a dichotic temporal separation of 6 msec and reflected the breakup of the fused stimulus. The right segment of this function crossed the 75% discrimination level at a dichotic temporal separation of 18 msec, reflecting temporal order discrimination. Data are discussed in terms of an overall framework which assumes that all of the phenomena which occur as a function of increased Δt result from different processing operations on the temporal continuum separating the dichotic stimuli. (31 ref)—*Journal abstract*.

11402. Curtis, Dwight W. & Mullin, Lois C. (U Alberta, Edmonton, Canada) **Judgments of average magnitude: Analyses in terms of the functional measurement and two-stage models.** *Perception & Psychophysics*, 1975(Oct), Vol 18(4), 299-308.—Nine students made magnitude estimates of the average loudness of pairs of 1,000-Hz tones varying in sound pressure. A test of fit of an averaging model employing an analysis of variance suggested that the judgments were internally consistent. However, estimates of the parameters of a 2-stage model based on the assumption that power transformations were imposed in both input and output implied a nonlinear output function inconsistent with the averaging model. Additional analyses employing a nonmetric scaling solution also suggested that output was nonlinear, indicating that this implication was not an artifact of the strong assumptions of the 2-stage model. Large differences were found among the output functions of individual Ss, and it is suggested that these may have inflated the error term in the analysis of variance, reducing its power to detect violations of the additive model. Similar analyses were performed on data from judgments of average grayness collected by D. J. Weiss (see PA, Vol 49:8253). (28 ref)—*Journal abstract*.

11406. Kuras, Janet E. & Findlay, Robert C. (Pittsburgh Hearing & Speech Society, Inc. PA) **Listening patterns of self-identified rock music listeners to rock music presented via earphones.** *Journal of Auditory Research*, 1974(Jan), Vol 14(1), 51-56.—Seven female and 18 male 18-25 yr old self-identified rock music listeners selected most comfortable and uncomfortable listening levels (MCL and UCL) for recorded speech and

for 2 samples of rock music under headphones. Ss tended to select similar MCLs for both samples of rock music. Among Ss, however, judgments of MCL for rock music varied with an even distribution across a range of greater than 50 db and in over half of these, the levels exceeded national damage risk criteria. In all cases, MCLs for rock music were higher than MCLs for speech. UCLs for rock music also tended to be higher than UCLs for speech. No "typical" MCL for rock music could be identified.—*Journal summary*.

11407. Morais, José (U libre de Bruxelles, Lab de Psychologie Experimentale, Belgium) **The effects of ventriloquism on the right-side advantage for verbal material.** *Cognition*, 1974-75, Vol 3(2), 127-139.—Asked 32 right-handed 15-28 yr olds to recall 1 of 2 simultaneous messages coming from hidden loudspeakers situated either at 90 or 45° from the median plane to the left and to the right. Ss were told that the messages were coming from 2 visible dummy loudspeakers which were also situated either at 90 or 45°. Prestimulus cueing of the side to be recalled was given. Significant right-side advantage was obtained in the 90° real-fictitious condition, not in the other conditions. Results show that right-side advantage can be obtained with presentation over loudspeakers and unilateral recall and dismiss a purely structural or purely cognitive view of lateral asymmetries in audition. Role of structural and cognitive factors is discussed. (26 ref)—*Journal abstract*.

11408. Morais, José (U Libre, Lab de Psychologie, Bruxelles, Belgium) **Monaural ear differences for same-different reaction times to speech with prior knowledge of ear stimulated.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 829-830.—J. Morais and C. J. Darwin (1974) found a right-ear advantage for speech on a same-different reaction-time task under monaural stimulation. The present study replicated this finding with 8 right-handed 18-26 yr old Ss (4 of whom served in Morais and Darwin's study) who knew before each block of trials which ear would be stimulated. The effect cannot be accounted for in terms of a lateral bias in voluntary attention.—*Journal abstract*.

11409. Musiek, Frank E. & Placek, Paul H. (Hitchcock Clinic, Hanover, NH) **The effects of rise-fall times on the recognition of patterns of duration.** *Journal of Auditory Research*, 1974(Jan), Vol 14(1), 65-70.—Studied the effect of rise-fall times of 2.5 and 20 msec on the recognition of 3-element patterns of duration. Duration of the 3 elements in the pattern was either short (S; 165 msec) or long (L; 236 msec) with a 200-msec interval between elements. Frequency was always 1 kc/s. Patterns were LSL, SLS, LLS, SSL, SLL, and LSS, and were presented once every 7 sec. Rise-fall time had no significant effect on mean number of correct recognitions. However, the patterns beginning with a S element yielded more incorrect responses than those beginning with a L element. Moreover, when a S element with the longer rise fall time initiated the pattern, significantly more errors occurred than when the L element introduced the pattern. Ss with musical training performed much better.—*Journal summary*.

modality upon comprehension. *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7592.

11411. Sawyer, Walter E. (State U New York, Albany) **Critical listening ability as a function of general listening ability and conditional reasoning ability in the sixth grade.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1554-1555.

11412. Tartter, Vivien C. & Eimas, Peter D. (Brown U, W. S. Hunter Lab of Psychology) **The role of auditory feature detectors in the perception of speech.** *Perception & Psychophysics*, 1975(Oct), Vol 18(4), 293-298. —Conducted 2 adaptation experiments with a total of 12 university students to determine some of the sufficient acoustic properties for excitation of the feature detectors underlying perception of voicing and place distinctions in speech. It was found that the greater the acoustic overlap between the adapting stimulus and the test continuum, the greater the adaptation effect. Results also show that various parts of the speech signal (e.g., the 2nd formant alone) were sufficient cues for adaptation of detectors. An outline of a model in which phonetic feature information is determined at an auditory level of analysis is presented. (16 ref)—*Journal abstract*.

11413. Warren, Richard M. & Byrnes, Dennis L. (U Wisconsin, Milwaukee) **Temporal discrimination of recycled tonal sequences: Pattern matching and naming of order by untrained listeners.** *Perception & Psychophysics*, 1975(Oct), Vol 18(4), 273-280.—Sets of recycled sequences of 4 successive tones were presented in all 6 possible orders to untrained listeners, 234 undergraduates. For pitches within the musical range, recognition could be accomplished as readily for tonal durations and frequency separations outside the limits employed for melodic construction as inside these limits. Identifying or naming of relative pitches of successive tones was considerably more difficult than matching for these tonal sequences. Use of frequencies above the pitch limits for music (4,500 Hz and above) resulted in poor performance both for matching and naming of order. Naming of order and pattern recognition appeared to reflect different basic processes. Special characteristics of tonal sequences are discussed. (22 ref) *Journal abstract*.

11414. Wender, Karl F. (Technische U Braunschweig, Inst fur Psychologie, W Germany) **Signal identification: The comparison of two competitive theories.** *Perception & Psychophysics*, 1975(Oct), Vol 18(4), 250-254.—On each of a series of random trials, 10 paid students were required to identify which of 2 possible tones of different amplitude had been presented. Two theories for this paradigm of signal identification were compared. One theory, the memory-trace model, is a normal process model, whereas the competitive theory, the memory-state model, assumes high thresholds operating in a Markov chain. Different predictions for sequences of stimulus response pairs were derived. Results of the experiment involving payoffs contingent upon the previous answer strongly favor the memory-trace model. *Journal abstract*.

Cognitive Processes

11415. Besner, Derek & Coltheart, Max. (U Reading, England) **Same-different judgments with words and nonwords: The differential effects of relative size.**

Memory & Cognition, 1975(Nov), Vol 3(6), 673-677.—In a study with 9 graduate students, research assistants, and college staff members, words were paired with words and nonwords with nonwords in a simultaneous matching task requiring a same-different judgment. A difference in size slowed "same" reaction times (RT) for both words and nonwords, while "differ" RTs for both words and nonwords were unaffected. Results do not support G. Bruder and W. Silverman's (see PA, Vol 51:9149) conclusion that the word processing system filters size. The effects of relative size differences are discussed in terms of (a) normalization procedures and (b) changes in states of evidence leading to alterations in a response selection stage. (17 ref)—*Journal abstract*.

11417. Calvano, Michael A. (Southern Illinois U) **The prediction of imaginatively mediated paired-associate learning from selected cognitive factors.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5706.

11418. Coltheart, Max; Hull, Elaine & Slater, Diana. (U Reading, England) **Sex differences in imagery and reading.** *Nature*, 1975(Feb), Vol 253(5491), 437-440. —Devised 2 cognitive tasks, one purely verbal and one purely visual, to test the generalization that females perform better on verbal tasks and males better on visual tasks. Ss were 38 female and 37 male undergraduates, all right-handed, who were tested individually with both tasks, and were asked to complete each task as quickly as possible. Female Ss completed the verbal task more rapidly than males, and male Ss completed the visual tasks more rapidly, but the difference was not significant because of wide individual variations. Tabulation of errors, however, showed a large sex difference, males making more errors on the verbal tasks and females more on the visual. Results of another task, using 10 male and 10 female Ss, indicated that phonological coding during reading is more prevalent with women than men. A 3rd experiment (10 male and 10 female Ss) showed that phonological access to lexical material is more rapid for women than for men, who prefer visual access. The educational implications of these findings, depending on how early in life these sex differences are present, are discussed.—*I. Davis*.

11419. Dominowski, Roger L. & Wetherick, Norman E. (U Illinois, Chicago Circle) **Inference processes in conceptual rule learning.** *Journal of Experimental Psychology: Human Learning & Memory*, 1976(Jan), Vol 2(1), 1-10.—Assigned a modified version of a classification rule-learning task to 128 undergraduates, who were required to learn either a conditional rule or a negation rule. An initial classification test was followed by 4 study test cycles, on each test, the S was asked to categorize 9 stimuli varying on 2 dimensions, while the S received category information MAX MIN procedure 4 of these stimuli on each study trial. On the initial test, the majority of Ss categorized stimuli in accordance with an inclusive disjunctive rule. Analyses of Tests 2-5 indicated that performance is not simply related to the degree of appropriateness of initial classification biases, that

extensive variation in transfer effects occurs among different stimulus subgroups, and that, for at least some stimuli, the effect of informative feedback is quite transitory.—*Journal abstract.*

11420. **Durndell, A. J. & Wetherick, N. E.** (Glasgow Coll of Technology, Scotland) **Reported imagery and social desirability.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 987-992.—Examined the suggestion that scores on imagery questionnaires reflect the social desirability of experiencing imagery and that consequently the validity of these scores should be questioned. In the present experiment, a battery of measures (including the Marlowe-Crowne Social Desirability Scale and the short form of the Betts' Questionnaire Upon Mental Imagery) was given to 4 groups of 1st- and 2nd-yr psychology students. Analyses showed that reported imagery was not affected by manipulation of E's status or of instructions as to the desirability of imagery. Reported imagery scores usually correlated very poorly with social desirability scores. Females reported more imagery than males.—*Journal abstract.*

11421. **Falmagne, Rachel J. (Ed.)** (Clark U) **Reasoning: Representation and process in children and adults.** New York, NY: Halsted, 1975. xii, 275 p. \$16.50.—Presents original reports of new models and data in the areas of propositional reasoning, syllogistic reasoning, and transitive inference. A wide range of theoretical viewpoints is represented, and an attempt is made to integrate these. General issues and questions relevant to the various approaches are discussed.

11422. **Forrester, William E. & Tambs, Clifford A.** **Word associations to 19 vowels.** *Journal of Experimental Psychology: Human Learning & Memory*, 1976(Mar), Vol 2(2), 200-207.—Word associations were obtained from 204 undergraduates at a state university in New York and from 147 at a state college in Virginia. Stimuli were 19 vowels presented as isolated utterances. For each of the 19 stimuli, data are presented to show response frequencies, number of times each word was given as a primary associate, and mean number of words elicited by the vowel. Frequency data from the 2 samples of Ss were significantly correlated for all vowels. A comparison of the normative data reported here with E. P. Hecker's (1972-1973) findings for preschool children suggests that the present norms may be applicable to findings as well as adults.—*Journal abstract.*

11423. **Frey, Dieter.** (U Mannheim, W Germany) **[The problem of reduction of cognitive dissonance in public situations.]** (Germ) *Zeitschrift für Experimentelle und Angewandte Psychologie*, 1975, Vol 22(4), 561-572.

Asked 47 male and female high school students, ages 15-17, to evaluate an intelligence test just after taking the test and receiving fictitious low results of their performances. Some Ss judged the test anonymously, others signed their evaluations and discussed the test among themselves. Strong dissonance reduction to the negative results through sharp critique of the test occurred only in the anonymous situation. The relevance of the results for the design of future experiments on cognitive dissonance is discussed. (English & French summaries)—*W. J. Koppitz.*

11424. **Herrmann, Douglas J.; Shoben, Edward J.; Alun, Joseph R. & Smith, Edward E.** (Hamilton Coll)

Cross-category structure in semantic memory. *Memory & Cognition*, 1975(Nov), Vol 3(6), 591-594.—In Exp I, 123 undergraduates made similarity judgments about all 56 category terms listed in the W. F. Battig and W. E. Montague (1969) norms. These judgments were then subjected to a hierarchical clustering analysis. Exp II, with 12 Ss, demonstrated that the relations among the category labels were very similar to the relations among the high dominance exemplars of these categories. Exp III, with 16 Ss, showed that the distances between the category terms in the hierarchical clustering could predict reaction times in a same-different paradigm. (15 ref)—*Journal abstract.*

11425. **Imam, Afzal & Naim, Raffat.** (U Karachi, Pakistan) **Effect of anxiety on incidental and intentional learning.** *Pakistan Journal of Psychology*, 1975(Jun), Vol 8(1-2), 37-46.—Investigated the influence of shock threat as compared to the normal condition on the memory of materials learned intentionally and incidentally. A 2 × 2 factorial design was used with 2 types and conditions of learning. Materials used were 10 nonsense syllables enclosed in 10 shapes and the matching of syllable to shape was the dependent variable. Instructions for intentional learning were to learn both syllables and forms but for incidental learning instructions were to learn syllables only. Statistical analyses revealed that both the main effects were significant. The difference between intentional and incidental learning was significant in both conditions but the difference between the normal and threat conditions was not significant for either type of learning. (22 ref)—*M. Akhtar.*

11426. **Imam, Afzal.** (U Karachi, Pakistan) **Rigidity and incidental learning: A replication study in Pakistan.** *Pakistan Journal of Psychology*, 1975(Jun), Vol 8(1-2), 25-35.—Successfully replicated an English study of the relationship between rigidity and incidental learning, using Pakistani university students. The rigidity scores were based on solutions of 3 jar problems. Incidental learning scores were based on the matching of nonsense syllables with geometrical forms. At the time of presentation, Ss were instructed to learn only the nonsense syllables enclosed in the geometric forms.—*M. Akhtar.*

11428. **Niles, Jerome A.** (State U New York, Albany) **The use of featural and letter dependency information in word recognition by elementary school children.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1507-1508.

11429. **Potter, Mary C. & Faulconer, Barbara A.** (Massachusetts Inst of Technology, Cambridge) **Time to understand pictures and words.** *Nature*, 1975(Feb), Vol 253(5491), 437-438.—Conducted an experiment with 40 adult Ss, divided into different groups under 3 conditions which required them to (a) name a pictured object, (b) read its written name, or (c) state whether it belonged in the category stated by the E. Analysis of timed responses showed that naming the pictured object took much longer than reading its name aloud, but deciding whether

an object was in a given category took slightly less time for a drawing than for a word. This seems consistent with the view that knowledge of the category of an object is associated with an abstract idea of the object rather than directly with its name or appearance.—*J. Davis.*

11430. **Sepe, Robert F.** (Southern Illinois U) **The relationship of performance on picture and word search tasks to certain cognitive traits.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5729-5730.

11431. **Shanteau, James & McClelland, Gary H.** (Kansas State U) **Mental search processes in problem solving.** *Memory & Cognition*, 1975(Nov), Vol 3(6), 627-634.—Applied a new approach to solving of multisolution problems in a memory search task. 15 female undergraduates memorized a list of 8 4-letter foods and then searched mentally through the list for answers to questions. The times between successive answers (IRTs) were recorded along with the answers themselves. This allowed a comparison of 2 possible memory search strategies: sampling with and sampling without replacement. Results are consistent with the sampling-without-replacement strategy. However, a more detailed breakdown of the data revealed that most Ss searched through the list in a rigid serial order. Further, an analysis of questions with identical answers showed that the IRTs were very nearly additive. This led to an additive time component model based on the independent summation of (a) read-in time, (b) memory-search time, (c) decision-making time, and (d) response-output time. This approach appeared generally more satisfactory than previous attempts to account for problem-solving behavior. (17 ref) *Journal abstract.*

11432. **Small, Duane W.** (La Salle Coll) **The abstraction of arbitrary categories.** *Memory & Cognition*, 1975(Nov), Vol 3(6), 281-285. J. D. Bransford and J. J. Franks (see PA, Vol 48:4191) showed that people retain the ideas expressed in linguistic input, rather than retaining the individual sentences. The extent to which this phenomenon reflects organizational processes based on co-occurrence information was investigated in 3 experiments by using Bransford and Franks' procedure but substituting arbitrarily chosen groups of words for sentences. Ss, a total of 131 undergraduates, gave higher recognition ratings to large new groups (analogous to complex sentences) than to small new groups (analogous to simpler ones), as long as the size of the group was in the range normally presented. They also showed the same ordering for old groups: but they rated old groups higher than new groups within each group size. It is concluded that hierarchical recognition response structure can be established without an ideational basis and that it does not require complete absence from memory of original input items.—*Journal abstract.*

11433. **Smith, Kirk H. & Foos, Paul W.** (Bowling Green State U) **Effect of presentation order on the construction of linear orders.** *Memory & Cognition*, 1975(Nov), Vol 3(6), 614-618. In 2 experiments, a total of 68 undergraduates constructed 4-term linear orders from 3 sentences expressing the relationships between adjacent elements in the order. Successful performance was more likely when the 2nd sentence introduced only 1 element not mentioned in the 1st sentence rather than 2 new elements and when the 2nd and 3rd sentences

introduced new elements as grammatical subjects rather than objects. Except for the latter result, previously proposed theories of reasoning processes primarily in 3-term series problems, predict other differences that failed to appear. Apparently, in longer series, memory limitations favor conditions in which each sentence after the 1st presents a relationship between a new and an old element in linguistic forms that identify the new element.—*Journal abstract.*

11434. **Sullivan, Laraine & Vaught, Glen M.** (State University Coll New York, Oswego) **Field articulation and linguistic structures.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 911-918.—Explored the relation of field articulation to sensitivity to linguistic structures in 46 undergraduates. Ss performed the rod-and-frame test and then made true/false judgments of sentences varying in grammatical and semantic complexity. While increased complexity did increase the difficulty of true/false judgments of sentences, the latencies of these judgments were unrelated to the scores on the rod-and-frame test. Results are discussed in terms of the generality of previous studies reporting a relationship between field articulation and linguistic abilities.—*Journal abstract.*

11438. **Wason, P. C. & Evans, J.** (U London, University Coll, England) **Dual processes in reasoning?** *Cognition*, 1974-75, Vol 3(2), 141-154.—Previous results have shown that the introduction of negatives into sentences used in a deductive problem affected behavior in a systematic way which was independent of the logical structure of the problem. In the present investigation, 24 students were asked to justify their responses when reasoning about such sentences. In accordance with previous results, responses were dominated by the terms in the sentences regardless of whether they were negated. However, the justifications did vary when negatives were introduced in accordance with the logical consequences of the responses. The interpretation of these justifications as causes of behavior seemed implausible. It is suggested that they were rationalizations or that there was at least some form of dual processing between behavior and conscious thought. (22 ref)—*Journal abstract.*

11439. **White, Raymond M.; Woods, John R. & Wozniak, William.** (Miami U, OH) **Effects of interpolating a secondary task during the intertrial interval of a concept identification problem.** *Memory & Cognition*, 1975(Nov), Vol 3(6), 648-652.—Several tasks were interpolated during the intertrial interval (ITI) of a concept identification (C-I) task. In Exp 1, 234 undergraduates counted backward by 3's, emitted a syllable, or refrained from thinking after all responses, after correct responses, or after errors. Counting backwards interfered

with performance, but only if it occurred after errors. Stimulus and feedback information was either withheld, as in Exp I, or made available during the ITI in Exp II. Data from 280 Ss indicate that counting backwards interfered with performance only when interpolated after errors, when stimulus-feedback information was withheld, but had an equivalent effect after errors and correct responses when stimulus-feedback information was available during the ITI, indicating that different strategies were induced by the presence of such information.—*Journal abstract.*

11441. Bellugi, Ursula; Klima, Edward S. & Siple, Patricia. (Salk Inst for Biological Studies, La Jolla, CA) **Remembering in signs.** *Cognition*, 1974-75, Vol 3(2), 93-125.—Presented signs of American Sign Language in list lengths of 3-7 items to deaf college students whose native language is American Sign Language, in a short-term memory experiment. A comparable experiment, using words, was presented to 8 hearing college students. Recall was written, immediate, and ordered. Overall, short-term memory mechanisms in the deaf seem to parallel those found in hearing Ss, even with the modality change. A significant number of multiple intrusion errors made by deaf Ss to signs were based on formational properties of the signs themselves, a result paralleling the phonologically based errors in experiments with hearing Ss. Results are consistent with a theory that the signs of American Sign Language are actually coded by the deaf in terms of simultaneous formational parameters such as hand configuration, place of articulation, and movement. Evidence is given that signs are treated by the deaf as consisting of independent parameters—specific to American Sign Language—which are essentially arbitrary in terms of meaning. (25 ref)—*Journal abstract.*

11442. Bolton, Martin & Haimson, Hedra. (Marymount Manhattan Coll) **Hierarchical effect of semantic memory on verbal learning.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 843-846. Studied the effect of hierarchical location (word level) within semantic memory in 20 elderly Ss (mean age, 83 yrs) to assess whether their difficulty on a free-recall task with words higher in their hierarchy would be greater. Words near the bottom of the hierarchy of semantic memory have been found to be more concrete and more difficult for producing subordinates. Associations were collected to see if the associations continued to illustrate a hierarchical effect as was proposed by E. F. Loftus and M. Bolton (see PA, Vol 52, 242). Results support an hypothesis of an effect of word level (a hierarchy in semantic memory) on verbal learning. The types of associations given also produced an effect on word level. A word's location in semantic memory does seem to affect verbal learning, even with older Ss.—*Journal abstract.*

11444. Brodie, Delbert A. (U Toronto, Canada) **Free recall measures of short-term store: Are rehearsal and order of recall data necessary?** *Memory & Cognition*, 1975(Nov), Vol 3(6), 653-662.—Several investigators have claimed that immediate free recall is a composite of output from 2 different storage systems: a short-term store (STS) and a long-term store (LTS). Free recall data and measures of STS were evaluated by having 36 undergraduates report their rehearsals while lists of words were presented at a rate of 1 word every 1.25, 2.50, or 5.00 sec. Results support the conclusions that (a) arranging recall as a function of where an item was presented, rather than where it was rehearsed, is inappropriate to discussions of STS and LTS; and (b) computing measures of STS without both rehearsal and order of recall data yields a biased estimate of STS. 11446. Chow, Siu L. & Murdock, Bennet B. (U Toronto, Canada) **The effect of a subsidiary task on iconic memory.** *Memory & Cognition*, 1975(Nov), Vol 3(6), 678-688.—Using a subsidiary task technique, R. Doost and M. T. Turvey (see PA, Vol 46:2275) concluded that iconic memory was independent of the central processing system. However, they did not control the timing between the short-term memory and the iconic-memory tasks in their 1st experiment and they used a rather long stimulus duration in their 2nd experiment. These procedural difficulties were rectified here in Exp I and II with 6 female undergraduates. It was found that memory load reduced partial report at all interstimulus intervals and there was no interaction. Exp I was replicated with auditory presentation in Exp III, with 6 graduate students and research assistants, ruling out a masking interpretation. Exp IV, with 4 Ss, ruled out an interpretation in terms of rehearsal or response competition. It is concluded that iconic memory, like short-term memory, is dependent on the central processing system in the sense that it will suffer in a subsidiary-task situation. The locus of the interference effect appears to be in the encoding stage.—*Journal abstract.*

11447. Chuang, Chong-Jen. (National Taiwan U, Taipei) **Effects of mental imaginability in paired-associate learning.** [Japn] *Acta Psychologica Taiwanica*, 1975, Vol 17, 145-150.—Conducted 2 experiments with a total of 220 university students. In Exp I, 200 Chinese nouns were scaled for mental imaginability by 200 Ss. In Exp II, the effect of mental imaginability on paired-associate learning was investigated. 2 word lists with different imaginability were learned by 20 Ss in this experiment. The effect of high and low imaginability was then compared. Results indicate that the list with high imaginability was learned faster than the one with low imaginability. (15 ref)—*English summary.*

11452. Engle, Randall. (U South Carolina) **Pupillary measurement and release from proactive inhibition.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 835-842. —One of the explanations of release from proactive inhibition in short-term memory is that the Ss re-attend to the items on the release trial, because the items are different from the previous ones. It is further assumed that this increase in attention causes the release items to be learned better than the preceding items. The present experiment measured the pupils of 80 paid volunteers' eyes while Ss were participating in a proactive-inhibition release-type task. Results show no increase in attention, as indexed by pupil size, on the release trial. This does not support the attentional explanation of the proactive-inhibition release phenomenon.—*Journal abstract*.
11453. Farnham-Diggory, S. & Simon, Herbert A. (Carnegie-Mellon U) **Retention of visually presented information in children's spelling.** *Memory & Cognition*, 1975(Nov), Vol 3(6), 599-608. Conducted 2 experiments with a total of 136 8-yr-old Ss to assess their ability to spell familiar or nonsense words which they had seen or heard for 2.5 sec. A visual or auditory task was interpolated for 12-15 sec before spelling began. Spelling of meaningful words was most accurate when words were presented visually, except when the interpolated task was watching random letters of the alphabet. Nonsense spelling did not show a similar pattern. It is suggested that, under certain conditions, visual word presentation provides more efficient pointers to long-term memory information than auditory presentation does. A model of the facilitation process is offered. *Journal abstract*.
11454. Fingeret, Allan L. (U Wisconsin) **Grouping effects in serial short-term memory.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5220.
11455. Flade, Antje. (Technische Hochschule Darmstadt, Inst für Psychologie, W Germany) **[Using Estes's model of memory organization to describe processes of grouping in memory.]** (Germ) *Zeitschrift für Experimentelle und Angewandte Psychologie*, 1975, Vol 22(2), 183-194. Used W. K. Estes's association model for coding and organization in memory to explain the higher probability of correct recall with grouped number lists than with ungrouped lists. Six Ss were tested in free recall after 1 visual or auditory exposure of the lists under all 6 conditions: ungrouped, grouped according to similarity, grouped according to proximity, each grouping in visual and acoustical mode. The effectiveness of the grouped materials was apparent for short-term retention only. Both conditions of grouping resulted in comparable advantageous effects. (English & French summaries) —W. J. Koppitz.
11456. Glanzer, Murray & Bowles, Nancy. (New York U) **Analysis of the word-frequency effect in recognition memory.** *Journal of Experimental Psychology: Human Learning & Memory*, 1976(Jan), Vol 2(1), 21-31.—Carries out a general decision-theory analysis of the word-frequency effect in recognition memory. On the basis of the analysis and data from a forced-choice experiment with 48 undergraduates, 2 distinct causes of the frequency effect are defined. A more specific theory based on the ideas of encoding and sampling is then presented and evaluated. Several implications of the theory are considered, including implications for the resolution of the recognition-recall frequency paradox. (30 ref)—*Journal abstract*.
11457. Goldstein, Evelyn F. (U Winnipeg, Canada) **Selective phonemic and semantic coding in short-term recall.** *Memory & Cognition*, 1975(Nov), Vol 3(6), 619-626.—Compared probed recall of targets from 6-word sequences containing either phonemically similar, semantically similar, or control (i.e., unrelated phonemically and semantically) stimuli under 2 conditions of encoding. Ss were 48 male undergraduates. For the semantic encoding condition, in which all cues provided category information about targets to be recalled, semantic similarity interference effects and phonemic similarity facilitation effects were demonstrated. In the phonemic encoding condition, in which all targets were cued by words which rhymed with them, only phonemic similarity interference effects were found. Results provide further evidence contradictory to the coding-based dichotomization of primary and secondary memory and reflect the importance of selective coding strategies induced by task requirements as determinants of interference effects in short-term recall. (37 ref)—*Journal abstract*.
11458. Gorfein, David S.; Arbak, Christopher; Phillips, Robert V. & Squillace, Linda. **Within-list serial position effects in free recall.** *Journal of Experimental Psychology: Human Learning & Memory*, 1976(Mar), Vol 2(2), 161-171. When recall is plotted against serial order of input, a typical performance curve in single-trial free recall is characterized by a small primacy effect, a flat mid-portion, and a sizeable recency effect. Under certain circumstances in the normally flat portion of the list, serial position curves can be obtained similar to those obtained over the whole list. 6 studies that both extend the range of conditions that produce within-list serial position effects and attempt to unravel 3 possible theoretical explanations for these functions are reported. A total of 236 undergraduates served as Ss. It is suggested that an explanation in terms of differential rehearsal of various subunits of the list has the greatest

generality in accounting for the obtained functions. However, in 1 study, while differential rehearsals were obtained, the expected serial position effect did not occur. It is concluded that differential rehearsal is not a sufficient condition to obtain within-list serial position effects, and it may not be a necessary one. (15 ref)—*Journal abstract.*

11459. Graves, Roger E. **Are more items identified than can be reported?** *Journal of Experimental Psychology: Human Learning & Memory*, 1976(Mar), Vol 2(2), 208-214.—Notes that Ss are typically able to report only about 4 items from a many-item array presented tachistoscopically (full-report span). Current models of visual information processing disagree as to whether the limiting process is best represented as identification or as short-term memory. W. K. Estes and H. A. Taylor (1964) have argued that the number of items identified is up to twice the full-report span and, hence, that memory limits report. In the present study, Exp I, with 20 undergraduates, used a memory-probe method which showed that when no position report is required the large number of items that were identified in the Estes and Taylor paradigm is not greater than the number in a postcognitive memory. Exp II, with 10 undergraduates, indicated that when position report is required the number of items identified (with correct position) does not exceed the number which can be reproduced in full report. Results support models in which memory in entailed by identification either as an aspect of the identification process or as a separate stage. (20 ref)—*Journal abstract.*

11460. Haque, Abdul & Sabir, Mohammad. (U Sind, Hyderabad, Pakistan) **The image of the Indian army and its effects on social remembering.** *Pakistan Journal of Psychology*, 1975(Jun), Vol 8(1-2), 55-61.—Studied social remembering in relation to national stereotypes. A passage concerning the Indian Army's performance in the Indo-Pakistani conflict was the experimental material used with Pakistani university students sometime after the fighting in 1965. Ss worked with serial reproduction method. Reproductions showed the familiar leveling and sharpening features. However, the important finding had to do with the contents of distortion, inasmuch as belittling of the Indian Army was an unambiguous manifestation of the negative stereotypes of Indians held by Pakistanis. (16 ref)—*M. Akhtar.*

11461. Harris, Gilbert J. (Herbert H. Lehman Coll, City U New York) **Order and item information in short-term reordering of letters.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 971-976.—Subsequent to seeing a sequence of 8 letters, 66 undergraduates were presented with the same letters in a jumbled order. Their task was to reconstruct the original order from the jumbled display. The acoustic similarity of the items and the rate of presentation were experimentally manipulated. A decrement in performance for sequences of acoustically similar items, as compared to those consisting of acoustically distinct items, increased as presentation rate decreased. Results are explained in terms of the processing of information about order and the acoustic nature of item information in short-term memory.—*Journal abstract.*

11462. Harris, Gilbert J. (Herbert H. Lehman Coll, City U New York) **Probe recall and short-term memory:**

Some evidence for nonlinear search strategies. *Memory & Cognition*, 1975(Nov), Vol 3(6), 609-613.—6 male undergraduates saw sequences of 3, 5, or 7 digits. A subsequent probe test signaled Ss to respond with the item that had followed (forward probe) or preceded (backward probe) the probe item in the sequence. Regardless of probe direction, correct reaction times increased linearly as a function of list length. Correct reaction time as a function of serial position yielded nonlinear curves, suggesting that Ss did not search memory serially in a forward direction. Instead, the shapes of these functions suggested response strategies which involved multiple entry or anchor points and backward search through short-term memory.—*Journal abstract.*

11463. Hasher, Lynn; Riebmman, Barbara & Wren, Frances. **Imagery and the retention free-recall learning.** *Journal of Experimental Psychology: Human Learning & Memory*, 1976(Mar), Vol 2(2), 172-181.—Conducted 3 experiments with a total of 320 undergraduates to study the effects of imagery on long-term retention in a free-recall task. In Exp I, the retention of lists of pictures vs lists of words learned under either imagery, verbal, or standard free-recall learning instructions was compared. In Exp II, the retention of concrete nouns learned under 1 of 3 types of imagery or standard free-recall learning instructions was compared. In Exp III, the retention of lists of concrete vs abstract nouns was compared. While imagery facilitated learning in several of these situations, in no instance did it result in superior long-term retention. Results do not support either a dual-codes model of the operation of imagery in memory or a redintegration model. (26 ref)—*Journal abstract.*

11464. Hawkinson, Murray G. & Walls, Russell E. **Manipulation of attributes in efficiency of concept formation.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 794.—No significant difference was found for 6th graders in experimental and control groups in correct responses to conjunctive concept problems, where the experimental Ss manipulated the sequences. This result differs from that reported by J. Huttenlocher (see PA, Vol 37:2517), where Ss who manipulated sequences performed more poorly than controls.

11465. Hayes, Donald S. & Rosner, Sue R. (U Maine, Orono) **The phonetic effect in preschool children: The influence of overt rehearsal and verbal instructions.** *Journal of Experimental Child Psychology*, 1975(Dec), Vol 20(3), 391-399.—60 preschoolers' (mean age, 5 yrs) serial matching of picture lists composed of either phonetically similar or unrelated items was compared under 3 conditions (verbal, rehearsal, and control). The lower retention of phonetic list was used as an index of verbal mediation by R. Conrad (see PA, Vol 47:4506) who found that preschoolers did not show differential retention, and hence no verbal encoding, even when they were required to label overtly. This finding was replicated and also obtained in a condition which emphasized the verbal aspects of the task. However, a significant phonetic effect and higher overall retention resulted from a condition which required overt, cumulative rehearsal. Alternative interpretations of the influence of rehearsal on the phonetic effect are offered. (16 ref)—*Journal abstract.*

11466. Johnston, William A. & Uhl, Charles N. The contributions of encoding effort and variability to the spacing effect on free recall. *Journal of Experimental Psychology: Human Learning & Memory*, 1976(Mar), Vol 2(2), 153-160.—Measures of encoding effort and encoding variability were taken during list study and were correlated with subsequent free recall in Exps I and II, respectively. A total of 136 undergraduates served as Ss. Encoding effort was measured in terms of reaction time (RT) to subsidiary light signals which were scattered throughout the aural presentation of words. Longer RTs implied greater processing effort directed to word encoding. RT increased somewhat across 4 presentations of a word and decreased across 4 massed presentations. Encoding variability was measured in terms of latency to detect word repetitions during a continuous visual-recognition task that preceded free recall. Longer detection latencies implied greater encoding variability. Free recall was greater for repeated words that were quickly and accurately detected than for ones that were slowly detected or totally missed. Data indicate that encoding effort, but not encoding variability, contributes to repetition effects on free recall.—*Journal abstract*.
11467. Kaplan, Ira T. (City Coll, City U New York) A unifying principle of memory span, forgetting, and serial position effect. *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 779-786.—Presented lists of 5-10 digits, spoken at the rate of 2 digits/sec, to 10 college students. The last digit in each list also occurred earlier in the list, and S's task was to write down the digit that followed the last one on its prior occurrence. Data were analyzed as measures of memory span, forgetting, and the serial position effect. These 3 phenomena were then related to one another by means of a principle that described how the probability of recall of each item in a list varied as a function of the numbers of preceding and following items. The effects of presentation rate and delayed recall are discussed. (23 ref)—*Journal abstract*.

11469. Kellogg, Howard M. (Columbia U) Task format and the deep-end hypothesis in the learning of mathematical group structures. *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5802.
11470. Kikuno, Haruo. (Educational Inst, Higashi Osaka, Japan) Effects of recall and rehearsal on clustering in free recall. *Psychologia*, 1975(Sep), Vol 18(3), 149-153.—90 junior high school students were divided into 3 groups (Recall, Rehearsal, and Control) and learned 30 word lists composed of 6 categories of 5 words each. On the 1st, the 4th and the 6th trial, all Ss were given a study-recall task, while on the 2nd, the 3rd, and the 5th trial the Ss in the Recall, Rehearsal, and Control groups were given a study-recall task, a study-rehearsal task, and a study task and the neutral task (cancellation task), respectively. Results were analyzed in terms of the number of recalled items and the index of clustering (IC) on the 4th and 6th trials and indicate that the Rehearsal group was superior to Controls on both recall and clustering. However, the Recall group was superior to Controls on recall, but not on clustering.—*Journal abstract*.

11472. Lauer, Patricia A.; Streby, William J. & Battig, William F. The effects of alphabetic organization on the acquisition and delayed retention of semantically similar words. *Journal of Experimental Psychology: Human Learning & Memory*, 1976(Mar), Vol 2(2), 182-189.—Following learning of 20 girls' first names to a criterion of 18 correct, either with or without first-letter cues and organization, 192 undergraduates were tested for 1-wk delayed recall with alphabetic cues present or absent for half of each group. Both simultaneous and successive presentation were cued for lists with names having either 5, 10, or 20 different initial letters. Cuing markedly facilitated original learning, which also improved significantly with a higher number of different initial letters. However, uncued learning led to much better delayed recall than cued learning, cued retention was superior to uncued retention, and retention of names with 20 different initial letters was superior to that with only 10 initial letters. Results indicate that alphabetic cues during learning produce less effective processing than uncued conditions and/or that the greater intratask interference in the semantically similar lists under uncued conditions serves to facilitate delayed retention. (15 ref)—*Journal abstract*.

11475. McFarland, Carl E. & Kellas, George. (U Kansas) Category similarity effects in children's semantic memory retrieval. *Journal of Experimental Child Psychology*, 1975(Dec), Vol 20(3), 369-376.—36 children, 12 each from grades 4, 5, and 6, indicated whether a stimulus word belonged in either of 2 semantic categories that were held in memory. Each category pair was either semantically similar or semantically dissimilar. Results indicate that even for the youngest children, similar categories required less search time than dissimilar categories. It is suggested that while dissimilar categories had to be accessed successively prior to search, Ss were able to consolidate similar categories into a superordinate group which eliminated the time to shift from one category to another during search. Results are contrasted with clustering studies which demonstrated a minimal amount of memory facilitation in children for conceptually related over unrelated items. (15 ref)—*Journal abstract*.

11479. **Paivio, Allan.** (U Western Ontario, London, Canada) **Perceptual comparisons through the mind's eye.** *Memory & Cognition*, 1975(Nov), Vol 3(6), 635-647.—Conducted 4 experiments with a total of 105 college students to test a theory of memory and cognition which assumes that verbal and nonverbal information are processed in functionally distinct long-term memory (LTM) systems. Ss presented with pairs of pictures or printed names of animals and objects differing in rated real-life size were instructed to choose the conceptually larger member of each pair, the one that appeared to be farther away, or the one whose name was easier to pronounce. Results show that (a) reaction time (RT) to choose the larger member increased as the memory size difference decreased, for comparisons between as well as within conceptual categories; (b) memory size comparisons were faster with pictures than with words, whereas the reverse occurred for pronounceability comparisons; (c) with pictures, but not with words, size comparisons were significantly slower when real-life (memory) size relations conflicted with physical size relations than when the 2 were congruent; and (d) the size congruency effect was reversed for relative distance judgments of pictured pairs. Results cannot be explained by current verbal coding or abstract (propositional) theories of LTM representations.—*Journal abstract*.

11480. **Paivio, Allan; Philipchalk, Ronald & Rowe, Edward J.** (U Western Ontario, London, Canada) **Free and serial recall of pictures, sounds, and words.** *Memory & Cognition*, 1975(Nov), Vol 3(6), 586-590.—Compared pictures and sounds of familiar objects and their visual and auditory names in free and serial recall tasks. Results of 2 experiments with a total of 256 undergraduates show that type of task interacted significantly with symbolic (verbal-nonverbal) and sensory (visual-auditory) modalities. Nonverbal items were remembered relatively better in free recall, whereas verbal items were superior in serial recall. In the visual modality, pictures were superior to words in both recall tasks; in the auditory modality, conversely, nonverbal sounds were inferior to words in serial recall but sounds and words did not differ in free recall. It is suggested that a satisfactory general theory of memory must encompass distinctions in both symbolic and sensory modalities as well as differences in the organizational demands of the memory task.—*Journal abstract*.

It is concluded that no single-process explanation is possible, and that more emphasis is needed in psycholinguistic research on the

content representation derived from sentences. (Russian & English summaries) (81 ref)—*F. Mester*.

11482. **Postman, Leo.** (U California, Berkeley) **Tests of the generality of the principle of encoding specificity.** *Memory & Cognition*, 1975(Nov), Vol 3(6), 663-672.—In Exp I with 96 undergraduates, the normative strength of the cues presented on the input and on the recall trial was varied factorially. To lessen the emphasis on strictly associative learning, only half the items were cued in each phase of the study-recall cycle. Recall was higher when the cues remained the same than when they changed. However, regardless of the condition of input cuing, strong output cues were substantially more effective than weak ones. In Exp II with 96 other Ss, the to-be-remembered words were shown in the presence of weak cues on the input trial. Recognition in the context of strong extralist cues was compared with recall to the original input cues. On the test of cued recognition, the target words were either generated by the Ss as free associates or presented to them as items on a test constructed by the E. Recall was not superior to recognition. The phenomena of cue-dependent forgetting that have been interpreted as evidence for the principle of encoding specificity appear to have limited generality. (18 ref)—*Journal abstract*.

11483. **Primo, Sherrill L.** (U Pittsburgh) **Locus of control of reinforcement as a cognitive characteristic of observers in a vicarious learning situation.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5205.

11484. **Reynolds, Ronald P.** (U Illinois) **The operant training of creativity in children.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7873-7874.

11485. **Robert, Michèle; White, Glenn M. & Rosenthal, Ted L.** (U Montreal, Canada) **Format for exposure and complexity of array in observational rule-attainment.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 999-1007.—Compared 2 conceptions of observational learning using a domino selection task that allowed Ss to follow a modeled response rule, to match particular numerical instances, or both. 40 male and 40 female college students showed strong rule-adoption and identification but very little mimicry of specific instance values. Live modeling by 2 male students produced stronger rule-adoption than did modeling a target through presentation of completed arrays, but live modeling and modeling a target led to comparable rule-description. There was greater mimicry of simple than more complex modeling sequences, but no difference between live and target-making conditions. Results support a symbolic concept-attainment view of observational learning phenomena rather than an operant response-matching explanation.—*Journal abstract*.

11486. **Schroth, Marvin L.** (U Santa Clara) **Acquisition of conjunctive concepts under different postfeedback conditions.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 771-776.—Investigated the formation of concepts under different postfeedback conditions to make a comparative assessment between hypothesis-testing theories and Stimulus-Response (S-R) associational models. Postfeedback conditions were made contingent on the correctness of S's response. 288 college students in 36 groups learned conjunctive concepts of varied complexity. Results support the S-R associational

hypothesis, and, in addition, the length of postfeedback interval did not affect acquisition of concepts.—*Journal abstract*.

11488. Taft, Marcus & Forster, Kenneth I. (Monash U, Clayton, Australia) **Lexical storage and retrieval of prefixed words.** *Journal of Verbal Learning & Verbal Behavior*, 1975(Dec), Vol 14(6), 638-647.—Reports 3 experiments with a total of 59 undergraduates and graduate students which support the hypothesis that in a lexical decision task, prefixed words are analyzed into their constituent morphemes before lexical access occurs. Results show that nonwords that are stems of prefixed words (e.g., *juvenate*) take longer to classify than nonwords which are not stems (e.g., *pertoire*), suggesting that the nonword stem is directly represented in the lexicon. Further, words which can occur both as a free and as a bound morpheme (e.g., *vent*) take longer to classify when the bound form is more frequent than the free form. Finally, prefixed nonwords took longer to classify when they contained a real stem (e.g., *dejuvenate*), compared with control items which did not (e.g., *depertoire*). A general model of word recognition is presented which incorporates the process of morphological decomposition. (17 ref)—*Journal abstract*.

11491. Walls, Richard T.; Rude, Stanley H. & Gulkus, Steven P. (West Virginia U, Research & Training Ctr.) **Model and observer learning of low, medium, and high level concepts.** *Psychological Reports*, 1975(Oct), Vol 37(2), 671-675. Used low (conjunctive), medium (disjunctive), and high (biconditional) level concept attainment problems to assess whether high levels vs low and/or medium difficulty concept rules yield less positive transfer for observers than models. Direct learning and transfer of models were compared with vicarious learning and transfer of observers. 30 graduate students in the latter condition observed 30 yoked models (also students) solve the initial problem before solving the intrarule-transfer task themselves. Conjunctive results were similar for models and observers, with efficient solution occurring for both. However greater positive transfer was apparent for models than observers in the biconditional task. Significant positive transfer occurred for both models and observers attaining the disjunctive rule.—*Journal abstract*.

11492. Wasim, Mohammed. (L Karachi, Pakistan) **Effect of repeated learning and overlearning on recall: I. A review of literature.** *Pakistan Journal of Psychology*, 1975, Vol 8(1-2), 63-74. Reviews the history of interest in the transfer phenomenon. Four general types of transfer are identified: (a) motor, (b) perceptual motor,

(c) verbal motor, and (d) transfer in verbal tasks. Three other specific kinds of transfer are discussed: (a) learning to learn, (b) transfer of general principles and mode of attack, and (c) transfer of set to learn. (27 ref)—M. Akhtar.

11493. Wöllersdorfer, Erwin. [An experimental contribution toward the theory of short-term memory.] (Germ) *Zeitschrift für Experimentelle und Angewandte Psychologie*, 1975, Vol 22(2), 347-366.—Investigated the theory of rehearsal of information before it is stored in long-term memory by presenting tetragrams without meaning to student Ss according to the method employed by L. R. Peterson. Results do not confirm the notion of short-term memory as a buffer for long-term storage. Items presented once were recognized as well after 7 min as immediately after presentation. Items presented repeatedly were reproduced better than stimuli silently rehearsed. Performance improved with spaced presentation of the stimuli. The concept of a special short-term memory is therefore rejected. (English & French summaries) (36 ref)—W. J. Koppitz.

11494. Yano, Yoshio. (Kyoto U of Education, Fushimi, Japan) **The effects of word order and prompting on sentence memory.** *Psychologia*, 1975(Sep), Vol 18(3), 154-161.—The recall of Japanese sentences varying in word order and grammatical voice was studied by the method of prompted recall with 80 male high school students. Verbatim and semantic criteria were used for scoring responses. In verbatim recall, word order of stimulus sentences and prompt words as well as voice were significant factors. In semantic recall, only the logical category of prompt words was significant. Syntactically transformed and/or semantically equivalent responses gave evidence in support of R. Rommetveit's (1971) message transmission hypothesis and the pragmatic function of syntactic structure. (16 ref)—*Journal abstract*.

11495. Yarmey, A. Daniel. (U Guelph, Canada) **Introspection and imagery reports of human faces.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 711-719.—504 undergraduates were asked to image suggested items and to rate their imagery on 6 different dimensions, each being a 7-point scale. Ss were also given the Vividness of Visual Imagery Questionnaire and a revised form of the Gordon test. Contrary to F. Galton (1883), both 42 low imagers and 42 high imagers were superior in visualizing faces of friends than acquaintances. Ss' generation of successive images steadily improved the quality of imagery. Differences were found in imagery reports of low and high imagers as a function of being made privately in a laboratory, in a group setting, or at home.—*Journal abstract*.

11512. **Zillmann, Dolf; Hay, T. Allan & Bryant, Jennings.** (Indiana U, Inst for Communication Research, Bloomington) **The effect of suspense and its resolution**

on the appreciation of dramatic presentations. *Journal of Research in Personality*, 1975(Dec), Vol 9(4), 307-323. —Conducted an experiment with 60 7- and 8-yr-olds. In a factorial design, degree of suspense (low, intermediate, high) of an adventure presented audiovisually was varied with resolution of the suspense (resolved, lingering). The variations were accomplished by producing different versions of the same program. Appreciation of the presentation was measured in Ss' facial displays, in structured interviews, and in ratings. Consistently across measures, under conditions of resolved suspense, appreciation substantially increased with degree of suspense. Under conditions of lingering suspense, appreciation also increased with degree of suspense but to a significantly smaller extent. Excitatory responses were measured in skin temperature and heart rate (HR). A significant differentiation of HR as a function of degree of suspense was observed. In addition, both skin temperature and HR disclosed sudden declines in excitation with the effective resolution of suspense. —*Journal abstract*.

Attention & Consciousness States

11513. Blum, Gerald S. (U California, Santa Barbara) **Reply to Jennings and George.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 957-958. —Criticizes L. B. Jennings and S. G. George's (see PA, Vol 55:Issue 6) attempted replication of the author's (see PA, Vol 28:6928) study on perceptual vigilance and defense. It is stressed (a) that the replication was not satisfactory because of shortcomings in method, including use of a different set of stimuli, and (b) that Jennings and George missed the theoretical point that an S's report is the result of a perceptual-cognitive sequence of events.

11514. Bosinelli, Marino; Cicogna, Piercarla & Molinari, Sergio. (U Bologna, Istituto de Psicologia, Italy) **The tonic-phasic model and the feeling of self-participation in different stages of sleep.** *Giornale Italiano di Psicologia*, 1974(Apr), Vol 1(1), 35-65. —Confirmed and extended the findings of S. Molinari and D. Foulkes (see PA, Vol 44:3080) and brought out the usefulness of the tonic-phasic model beyond the present controversial Primary Visual Experience Secondary Cognitive Elaboration dichotomy. A questionnaire on the feeling of self-importance in the oneiric scene and 2 ordinal rating scales for self-participation and for setting were used to investigate M. Bosinelli and Molinari's (1965) findings. O. Pompeiano's (1967, 1970) hypothesis on the relevance of vestibular functions in dream production, and Molinari's (1973) concept that the feeling of self-participation was more evident in REM-stage movement than in REM-stage quiescence. Data were obtained from 10 18 28 yr old male university students over 4 nonconsecutive nights. Results confirm the importance of the REM-stage movement situation to dream activity, suggest the existence of a cognitive background during different stages of sleep, and prove the usefulness of the study of self-participation in dream research. (61 ref) —*Journal abstract*.

11515. Butler, Brian E. (U Waterloo, Canada) **The role of attention in visual perception.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5218.

11516. Jennings, Luther B. & George, Stephen G. (Occidental Coll) **Perceptual vigilance and defense revisited: Evidence against Blum's psychoanalytic theory of subliminal perception.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 723-729. —G. S. Blum's (see PA, Vol 28:6928) interpretation of psychoanalytic theory leads him to predict that Ss will defend against a threatening stimulus which is just below a recognition threshold and be vigilant toward the same stimulus when it is farther below the same threshold. In the present experiment, 16 undergraduates were presented the same 4 Blacky pictures, at the same speed and illumination, and using the same procedure as Blum. Results offer no support for the theory of perceptual vigilance or defense. The weaknesses inherent in Blum's theory and supporting methodology are discussed. —*Journal abstract*.

11517. Leftwich, Marilyn S. (Florida State U) **The effect of environmental noise on human patterns of sleep obtained in the laboratory.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5224.

11518. Mancia, Mauro. (U degli studi di Milano, Inst di Fisiologia Umana, Italy) **[Dream sleep and instincts: An interdisciplinary approach.]** (Ital) *Archivio di Psicologia Neurologia e Psichiatria*, 1975(Apr-Jun), Vol 36(2), 176-203. —Describes sleep as a peculiar kind of instinct in which appetitive and consummatory phases alternate rhythmically. The appetitive stage corresponds to NREM sleep and the consummatory stage to REM sleep. REM sleep is characterized by hallucinations and self-representations typical of dreams. During REM sleep connected to dreams a fusion of instinctual (erotic or destructive) pulsations takes place under pressure from the pleasure principle, with an hallucinatory fulfillment of instinctive wishes and a consequent reduction of tension through a homeostatic quality relevant to maturation and survival. —L. L'Abate.

11519. Pagano, Robert R.; Rose, Richard M.; Stivers, Robert M. & Warrenburg, Stephen. (U Washington, Seattle) **Sleep during transcendental meditation.** *Science*, 1976(Jan), Vol 191(4224), 308-310. —Five male 20-30 yr old experienced practitioners of transcendental meditation spent appreciable parts of meditation sessions in sleep Stages 2, 3, and 4. Time spent in each sleep stage varied both between sessions for a given S and between Ss. In addition, EEG records made during meditation were compared with those made during naps taken at the same time of day. The range of states observed during meditation did not support the view that meditation produces a single, unique state of consciousness. —*Journal abstract*.

11520. Ritter, Gerald W. (Oklahoma State U) **Production of stimulus independent thought as a function of task priority, signal predictability, and rate of signal presentation.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5230.

11521. Scott, W. Clifford. **Remembering sleep and dreams.** *International Review of Psycho-Analysis*, 1975, Vol 2(3), 253-254. —Major topics of this comprehensive review include the following: (a) physiological approaches to sleep and dreams; (b) Freud's views on sleep; (c) early psychoanalytic views on sleep; (d) recent literature on sleep and dreams; (e) time, sleep, and dreams; (f) sleeping and looking at the analyst during

psychoanalysis; (g) sleep, dreams, and waking; (h) and self-envy and envy of dreams and dreaming. It is concluded that (a) analysts have studied dreams at the expense of an examination of sleeping and waking; (b) analysis of the relationship between minor disorders of sleeping and waking and the remembering and forgetting of dreams serves an integrative function, ultimately enabling the analyst to carry out his own analysis; (c) sleep is a period of narcissistic reconstitution, leading to the daily experience of waking as a rebirth; (d) unconscious omnipotent fantasies influence the perception of time; and (e) the waking ego's envy of the dreaming ego leads to a dissociative forgetting of the dream upon waking. Case illustrations are included. (4 p ref)—C. Peterson.

(U California, Los Angeles) **Hallucinations: Behavior, experience, and theory.** New York, NY: John Wiley & Sons, 1975. xiii, 322 p.—Presents a collection of 9 articles on the theory and phenomenology of hallucinations, including their neurochemical, neurophysiological, behavioral, and cognitive aspects. Topics include anthropological perspectives on hallucinations, the continuum of CNS excitatory states and hallucinosis, drug-induced hallucinations in animals and man, and the social context of hallucinations.

11524. Webb, Wilse B. **Sleep: The gentle tyrant.** Englewood Cliffs, NJ: Prentice-Hall, 1975. xi, 180 p. \$7.95(cloth), \$3.95(paper).—Presents a nontechnical discussion of many aspects of sleep as they are revealed by current research. Topics covered include the dimensions and organization of sleep; its variations in children and the aging; sleep pathology (insomnia, narcolepsy, sleepwalking, etc); the effects on sleep of disease and drugs; and the effects on behavior of lack of sleep.

11525. Zimolung, Bernhard. (Technische U Braunschweig, Inst für Psychologie, W Germany) **[Investigation of the time dependence of the TSD parameters and the effect of event frequency in vigilance tasks.]** (Germ) *Zeitschrift für Experimentelle und Angewandte Psychologie*, 1975, Vol 22(2), 367-390.—Asked 6 Ss to discriminate between a brighter light (S) and a dimmer light (NS) in a vigilance task. The ratio of N to NS and the probability of events were varied. Results are interpreted in terms of the Theory of Signal Detection (TSD). An increase in the event rate results in a decrease of the d' parameter. (English & French summaries) (36 ref)—W. J. Koppitz.

EXPERIMENTAL PSYCHOLOGY (ANIMAL)

11526. Blough, Patricia M. (Brown U) **The pigeon's perception of saturation.** *Journal of the Experimental Analysis of Behavior*, 1975(Sep), Vol 24(2), 135-148.—Three experiments employing a total of 8 White Carneaux pigeons used similar methods to investigate the S's perception of saturation of monochromatic lights. This trial-wise procedure consisted of brief presentations

of positive and negative stimuli in random sequence. Pecks to the positive stimuli were occasionally reinforced on a low FR schedule. Exp I determined absolute thresholds for "white" and monochromatic lights by establishing a discrimination between lights of various radiances and a dark key. Exp II investigated generalization from a white light to various monochromatic lights under conditions that minimized the use of luminance as a cue. Exp III examined discrimination of various monochromatic lights along a colorimetric purity continuum; responses to white light were reinforced, while responses to lights that combined white and monochromatic lights in various proportions were not. Results indicate that lights of different wavelength differ in saturation but that all are discriminable from white. Wavelengths between 550 and 600 nm are least saturated for the pigeon, and saturation increases markedly as wavelength decreases below this region of the spectrum. (19 ref)—*Journal abstract*.

11527. Crawford, M. L. (U Texas, Medical Ctr, Houston) **Test flash intensity and variability of fixation by the rhesus monkey.** *Vision Research*, 1976(Jan), Vol 16(1), 117-118.—Experimental data suggest that in the increment threshold experiment, threshold stimulus values represent detection sensitivity of the central fovea. Data present important difficulties for the experiment to measure the concurrent response of lateral geniculate nucleus neurons and behavioral increment thresholds, as stimulus flashes above threshold energies must be used and appear to fall on different regions of the retina with each presentation.

11528. Dornfeldt, Klaus. (U Göttingen, Zoologisches Inst, W Germany) **[The control system of homing in the spider *Agelena labyrinthica* (Cl.).]** (Germ) *Zeitschrift für Tierpsychologie*, 1975(Oct), Vol 38(3), 267-293.—In general, *Agelena* appears to determine its home direction by integrating the information of each element of the outgoing path to the prey in continuous interaction with the incident light reaching the web. Among the more important findings were the following: (a) Spiders starting at fictitious retreat points did not keep straight courses; their movements were either at random or determined somewhat by the light conditions obtaining during the immediately preceding outward course. (b) If the light was displaced before the spider was lifted from the web, the lifting had no effect on the orientation performance. It is concluded that Mittelstaedt's hypothesis about homing of *Agelena* (which is similar to the author's own vector hypothesis) is compatible with the present data. (English summary) (20 ref)—P. J. Capretta.

11529. Duelli, Peter. (U Zürich, Zoologisches Vergleich Anatomie Inst, Switzerland) **[Orientation without external orientation clues in reptiles.]** (Germ) *Zeitschrift für Tierpsychologie*, 1975(Oct), Vol 38(3), 324-328.—Gecos (*Hemidactylus frenatus*) are able to find their hiding place in a black-painted cylindrical arena without the aid of external orientation clues. This proprioceptive knowledge of the position appears to be independent of the azimuth of the actual position of head and body, but it is influenced by a passive turning of the reptile. These findings imply that the receptors of the labyrinth participate in the endogenous (idiothetic) course control. (English summary)—P. J. Capretta.

11530. Ginsburg, Harvey J. (U Houston) **The tonic immobility reaction in domestic fowl (*Gallus gallus*): An examination of the defensive distance hypothesis.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5166.

11531. Gregory, Estelle H. & Bishop, Allen. (California State U, Los Angeles) **Development of olfactory-guided behavior in the golden hamster.** *Physiology & Behavior*, 1975(Sep), Vol 15(3), 373-376.—Tested golden hamster pups for an odor preference every day from 1-16 days of age with shavings from their home cage and with clean wood shavings. Ss showed a clear preference for their home cage shavings by 8 days of age. Tests for preference with other odor pairs indicated that this preference was due to a change in the hamsters rather than a change in the stimulus. In these tests Ss did not demonstrate a preference for their home shavings over shavings in which a nonlactating female had lived. —*Journal abstract.*

11532. Hardaway, Sylvia S. (U Florida) **Stimulus complexity in relation to adaptation level concepts during exploration.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5167-5168.

11533. Horn, Steven W. & Lehner, Philip N. (Colorado State U, Lab of Animal Behavior) **Scotopic sensitivity in coyotes (*Canis latrans*).** *Journal of Comparative & Physiological Psychology*, 1975(Nov), Vol 89(6), 1070-1076.—Measured the absolute scotopic limen for light intensity for 3 10-mo-old female coyotes. The methodology was similar to that used by D. S. Blough (see PA, Vol 33:7701) in determining psychological thresholds in pigeons. Ss were operantly conditioned to depress 1 of 2 foot treadles, left or right, depending on the condition of the stimulus light. Scotopic adaptation curves for each S were generated. Nonlinear aggression curves were then fitted to the raw data. The mean scotopic thresholds did not differ significantly. However, time to the curves' asymptotes did differ significantly for 1 S. The adaptation curves showed a distinct rod-cone "break," and retinal histology confirmed that the coyote has a duplex retina with a preponderance of rods. In addition, electroretinographic analysis showed the relative contributions of rods and cones at various light intensities and indicated a rod-cone break at approximately 15 min. Scotopic spectral sensitivity curves were also generated. Ss' scotopic visual threshold was exceeded by the natural illumination available under many nocturnal conditions. —*Journal abstract.*

11534. Humphrey, N. K. & Keeble, G. R. (U Cambridge, England) **Interactive effects of unpleasant light and unpleasant sound.** *Nature*, 1975(Jan), Vol 253(5490), 346-347. Attempted to determine whether the rhesus monkey's known aversion to red light is increased by exposure to unpleasant sound. Ss were 2 adult male *Macaca mulatta* who found white noise very aversive (NAs) and 2 who found it relatively tolerable (NTs). For NAs, background noise increased the aversion to light, for NTs, it had little influence. Thus noise appears to increase the aversion to red light only if the noise itself is aversive. The effects of the 2 stimuli probably potentiate each other. The reason for monkey's dislike of red light is unknown. Red light has been reported to exacerbate physiological and psychological

symptoms of patients suffering from cerebellar and spinal disorders, and some speculations on these findings are presented.—*I. Davis.*

11535. O'Shea, Michael & Rowell, C. H. (U California, Berkeley) **Protection from habituation by lateral inhibition.** *Nature*, 1975(Mar), Vol 254(5495), 53-55.—Describes the mechanism of protection from habituation as it operates in the movement detector (MD) neurones of the locust. Habituation is rapid in response to small-field movements but is absent in prolonged large-field or whole-field movements; therefore the latter do not reduce the responsiveness of the MD neurones to subsequent small-field movements. Protection from habituation is achieved by lateral inhibition, which acts prior to the site of response decrement to suppress the response to whole-field stimuli. Possible functions of lateral inhibition are discussed; one is its role in determining that the MD system will ignore visual displacements caused by the animal's own movements. —*I. Davis.*

11537. Petrich, Judith A. & Chiesi, Harry L. **The locus of color-context changes, encoding instructions, and their effect on retroactive inhibition.** *Journal of Experimental Psychology: Human Learning & Memory*, 1976(Mar), Vol 2(2), 190-191.—Conducted 4 retroactive inhibition (RI) experiments involving the AB, AC (same stimuli, different responses) paradigm with a total of 204 undergraduates to determine whether learning the original list (OI) and the interpolated list (IL) under different color-context conditions (different) would reduce RI relative to learning both lists under the same context conditions (same). In Exp I context changes in the background color of slides failed to reduce RI. In Exp II, pretraining on the transfer task and upcoming background-color sequence also failed to reduce RI for the different group. Context was varied by manipulating actual print color of responses in Exp III, and of stimuli in Exp IV. Pretraining significantly elevated all performance measures in both experiments, and the different condition significantly reduced RI (under pretraining conditions) when stimulus color changed. (23 ref) —*Journal abstract.*

11538. Rabøl, Jorgen. (Zoological Lab, Copenhagen, Denmark) **The orientation of night-migrating passerines without the directional influence of the starry sky and/or the earth magnetic field.** *Zeitschrift für Tierpsychologie*, 1975(Oct), Vol 38(3), 251-266.—Conducted several hundred orientation experiments during 4 seasons, 1972-1973, with various passerines (redstarts, blackcaps, robins, and garden warblers), which were subjected to an overcast sky and/or an artificially disturbed magnetic field. Comparison of the orientational behavior of these Ss with others allowed to orient under a starry sky and without magnetic disturbance showed little, if any, reduction in orientation under the deprived conditions, suggesting that direction cues from sources other than stars and earth's magnetic field were probably involved. It is conjectured that inertial orientation (vector navigation) plays an important role. It is

concluded that simple, one-directional orientation models are not sufficient to account for the data. (28 ref)—P. J. Capretta.

11539. Reinhardt, V. & Reinhardt, A. (Technische Universität München, Inst für Psychologie, Munich, W Germany) **Dynamics of social hierarchy in a dairy herd.** *Zeitschrift für Tierpsychologie*, 1975(Oct), Vol 38(3), 315-323.—Determined all possible social rank-pair relationships of a herd of 10 heifers and 32 dairy cows kept in an open byre. Shifting in rank position was found to be inherent in the dynamic interdependency between age, body weight, and social rank. Social rank aggressiveness was highest between rank neighbors and lowest between rank partners widely separated in the social rank scale. Most social rank tension occurred among "junior cows," animals of frustrated rank ambition, and animals with behavior not synchronized with the herd. Redirected aggression, and the induction of aggressiveness by the sight of 2 other contesting animals, are described. (German summary) (22 ref)—*Journal summary*.

11540. Tuttle, Russell H. (Ed.). **Socioecology and psychology of primates.** Aldine, Chicago: Mouton Publishers, 1975. xv, 474 p. \$29.50.—Presents research studies, essays, and discussions about the ways in which habitats and social groupings may influence primate behavior. The behaviors, species, and geographical areas considered cover a wide range.

11541. Varju, D. (U Tübingen, Lehrstuhl für Biokybernetik, W Germany) **Stationary and dynamic responses during visual edge fixation by walking insects.** *Nature*, 1975(May), Vol 255(5506), 330-332.—Records the optomotor responses of the mealworm beetle (*Tenebrio molitor*), when freemoving with unrestricted scanning movements of the head, to rotation of the visual field. The insect was placed inside a rotatable cylinder whose inner surface was the visual panorama. The apparatus is described in detail. When the drum was stationary and the inner surface was half black and half white, the insect walked toward the right edge of the black field, visually guided. When the drum was rotated, and when the number of black and white stripes was varied, the insect continued to attempt fixation of a black stripe. It is suggested that these turning movements can be accounted for as a fixation of moving edges rather than as a velocity compensation, which has usually been considered as the visual stimulus of the optomotor response. Theoretical considerations arising from these results are formulated and discussed.—I. Davis.

Learning & Motivation

11542. Atnagulov, R. Ya. & Smirnov, D. I. (Bashkir State U. Ufa, USSR) [Precision of time count in rabbits, depending on duration of the intersignal interval.] (Russ) *Zhurnal Vysshei Nervnoi Deyatel'nosti*, 1974(Jan-Feb), Vol 24(1), 10-17.—Studied the period of stabilization of conditioned food getting reflexes coordinated with different intervals of time permutations of 2, 3, 4, and 5 min. In reference to the dependence of the precision of time count in 17 rabbits 6-10 mo. Results show an increase in absolute error in the precision of the time count as the duration of the intersignal interval lengthened. Characteristics of the stage of differentiated conditioned reflex to time and assumptions regarding the

nature of the neurodynamic processes accounting for the uniformity in results obtained are discussed. (English summary)—L. V. Majovski.

11543. Bayés, Ramón. (U Barcelona, Escuela Profesional de Psicología Clínica, Spain) **[Generalization gradient in a turtle-dove.]** (Span) *Revista Latinoamericana de Psicología*, 1975, Vol 7(3), 401-409.—Established a generalization gradient in an operant situation following discrimination learning in a turtle-dove. It is concluded that the dove has accurate color discrimination and that the generalization gradient for colors is similar to that of the pigeon.—*English summary*.

11544. Berger, David F. & Brush, F. Robert. (State University Coll New York, Cortland) **Rapid acquisition of discrete-trial lever-press avoidance: Effects of signal-shock interval.** *Journal of the Experimental Analysis of Behavior*, 1975(Sep), Vol 24(2), 227-239.—Studied acquisition of discrete-trial leverpress avoidance learning in 3 experiments employing 40 female Sprague-Dawley and 75 Long-Evans hooded rats. Exp I compared a new training procedure, which produces rates of leverpress avoidance learning comparable to those obtained in shuttle boxes, with a "conventional," less efficient training procedure. A factorial design was used to compare continuous vs intermittent shock and a long-variable vs a short-fixed signal-shock interval. Learning was best in groups trained with the long and variable interval and poorest in those trained with the short and fixed interval. Type of shock had no effect. Exp II separated the effects of duration from those of variability of the signal-shock interval. FIs and VIs of 10 and 60 sec were tested, and duration was the only significant factor. Exp III addressed the effect of the differential opportunity to avoid provided by long signal-shock intervals by varying this interval from 10 to 60 sec in 10-sec steps. Only the 10-sec group showed slow acquisition. Analysis of avoidance response latencies showed that the distributions for all groups were positively skewed and that skewness increased with increasing duration of the signal-shock interval. At intervals longer than 20 sec, Ss made progressively less use of their increased opportunity to respond. The data do not support the opportunity-to-respond interpretation of the effects of duration of signal-shock interval and suggest that some type of inhibitory process may block leverpress avoidance learning at intervals as short as 10 sec. The significance of these findings for species-specific defense reaction and preparedness theories is emphasized. (34 ref)—*Journal abstract*.

11545. Boltz, Jeffrey B. & Drickamer, Lee C. (Williams Coll) **Effect of color in rearing and testing environment on the behavior of young domestic chicks.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 979-985.—In 2 experiments a total of 256 White Rock chicks were reared individually in compartments of 4 different colors and then tested either in a color-preference test with stationary objects or with a moving stimulus. For each type of test, 4 background colors were used in the test arena. The dependent variables included color preferences, following behavior, and emotional responses of the Ss. Results show no significant effects of the color of the arena-background in either test situation. The color of the rearing compartment was a significant factor

affecting color preferences in the test with stationary objects. In both test situations the colors red, and then green, were the most potent in affecting color preferences and emotional responses.—*Journal abstract*.

11546. Calef, Richard S. et al. (W Virginia Wesleyan Coll) "Dwelling" time, operant measure of "depression" effect in escape conditioning. *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 837-838.—Results in albino and hooded rats given escape conditioning show that time between depression and release of the lever ("dwelling" time) for experimental Ss, shifted from high to low intensity shock, was longer than controls' maintained on low intensity ("depression").

11551. Davis, John D.; Collins, Barbara J. & Levine, Michael W. (U Illinois, Chicago Circle) *Peripheral control of drinking: Gastrointestinal filling as a negative feedback signal, a theoretical and experimental analysis*. *Journal of Comparative & Physiological Psychology*, 1975(Nov), Vol 89(9), 985-1002.—Conducted 5 experiments to investigate the hypothesis that the osmotic postingestional satiety signal proposed by R. A. McCleary (1953) operates through a mechanism related to gut filling rather than by osmotically induced shifts of fluid from osmoreceptors in the brain. Ss were a total of 15 male albino Sprague-Dawley rats and 31 Charles River rats. A control theory model, designed to make quantitatively explicit the hypothesis under question, is presented. Results show that when mannitol, which is not absorbed from the intestine, is added to a highly palatable saccharin-glucose mixture, the amount of fluid consumed decreased in inverse proportion to the mannitol concentration. Mannitol blocked fluid absorption from the intestine at a low concentration and at higher concentrations to lead to a net flux of fluid into the intestinal lumen. It was also shown that mannitol in concentrations that reduced the intake of the palatable solution did not induce thirst when Ss were in water

balance. It did induce thirst when Ss were tested in a state of negative water balance. Results, considered as a whole, support the view that McCleary's osmotic postingestional satiety signal acts as an intestinal distention signal rather than by inducing thirst. (48 ref)—*Journal abstract*.

11554. Fabrigoule, Colette. (CNRS, Inst de Neurophysiologie et Psychophysiologie, Marseilles, France) *[Experimentation on spatial learning in the dog: Learning of progressive exclusion.]* (Fren) *Cahiers de Psychologie*, 1974, Vol 17(2), 91-110.—Analyzed spatial and cognitive aspects of animal learning with 6 3-mo-old German Shepherd dogs. Food was placed in identical basins at the end of 4 paths of equal length, extending in a fan shape from the starting point. Ss were to obtain the food in the 4 locations without revisiting any basin. Success consisted of obtaining the food in all pans by whatever pattern without a repetition in 4 successive trials. All Ss achieved the criterion—success on 3 successive days—with considerable variation in search pattern. Of the 12 possible success patterns, only 7 were used more than twice by at least 1 S. Stereotyped search strategies noted were (a) repetition favoring the 2 end basins and (b) rotation among basins. Use of the wide divergence pattern was rated high in 4 dogs. The stereotypy is interpreted as representing a stage in the learning process leading to successive behavioral reorganizations and evidencing plasticity of conduct in the face of a difficult learning task rather than rigidity. (English abstract)—E. Brown.

11555. Frankel, Paul W. (Princeton U) *Differential behavioral contrast and choice*. *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5220-5221.

(U New Mexico) *Extinction deficits in socially isolated rhesus monkeys (Macaca mulatta)*. *Developmental Psychology*, 1976(Mar), Vol 12(2), 173-174.—In a study with 18 5-yr-old rhesus monkeys, 6 Ss reared in total isolation made more unrewarded responses and took longer to stop responding in the face of nonreward than 12 Ss raised in partial isolation or normally. It is suggested that isolates have difficulty inhibiting high-probability responses.

11557. Jensen, Robert A.; Riccio, David C. & Gehres, Larry. (Northern Illinois U) *Effects of prior aversive experience upon retrograde amnesia induced by hypothermia*. *Physiology & Behavior*, 1975(Aug), Vol 15(2), 165-169.—2 experiments examined the extent to which retrograde amnesia (RA) is attenuated by prior learning experiences. In Exp I, 60 male Holtzman rats initially received either passive avoidance training in a step-through apparatus, exposure to the apparatus, or noncontingent footshock. When training on a 2nd but different passive avoidance task was followed by hypothermia treatment, RA was obtained only in the latter 2 groups. In Exp II, 1-way active avoidance

training, yoked noncontingent shocks, or apparatus exposure constituted the initial experience for another 60 Holtzman rats. Subsequent step-down passive avoidance training and amnesic treatment resulted in memory loss for the apparatus exposure group, but not for either of the preshocked conditions. Results demonstrate that certain types of prior aversive experience can substantially modify the magnitude of RA, and, in conjunction with other familiarization studies, emphasize a paradox for interpretations of RA based solely upon CNS disruption. (15 ref)—*Journal abstract*.

11558. Kadden, Ronald M. (Columbia U) **Stimulus distribution and response-dependence as parameters of temporally defined schedules of negative reinforcement.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5223-5224.

11559. Kamarek, Robin B. (Harvard U School of Public Health, Boston) **Availability and caloric density of the diet as determinants of meal patterns in cats.** *Physiology & Behavior*, 1975(Nov), Vol 15(5), 611-618. —In Exp I patterns of food intake were examined in 2 female cats both under ad lib feeding conditions, and when the availability of food was constrained by requiring the completion of FR schedules of barpresses to obtain a meal. As the ratio requirement was increased, frequency of feeding decreased, while both meal size and meal duration increased. Body weight did not decrease until the highest ratio requirements. When the caloric density of the diet was decreased in Exp II, the Ss maintained bulk rather than caloric intake under all conditions of availability. It is concluded that environmental variables, particularly the availability and nutritional properties of the diet, are major determinants of natural patterns of feeding. (37 ref)—*Journal abstract*.

11560. Leonard, Robert B. & Cohen, David H. (U Texas, Marine Biomedical Inst, Galveston) **The peripheral unconditioned stimulus pathway in a model learning system involving defensively conditioned heart rate change in the pigeon.** *Journal of Comparative & Physiological Psychology*, 1975(Nov), Vol 89(9), 1083-1090. —Conducted 3 studies using White Carneaux pigeons. The peripheral pathway transmitting the UCS information is described in a vertebrate model system for studying learning visually conditioned heart rate change in the pigeon. In this system footshock serves as the UCS, and it is shown that the effective stimulation field of this stimulus, defined with respect to the unconditioned cardioacceleratory response, includes cutaneous dermatomes 21-25 (L1-S1). The stimulus information is then transmitted by Group III and IV fibers in portions of the femoral and sciatic nerves which enter the spinal cord over segments 21-25. Further, it is shown that interrupting this pathway by section of dorsal roots 21-25 precludes establishing conditioned heart rate change with footshock as the UCS. *Journal abstract*.

11561. Leyland, C. Mark & Honig, Werner K. (Chemical Defence Establishment Salisbury, England) **Maintenance of behavior controlling the duration of discriminative stimuli.** *Journal of the Experimental Analysis of Behavior*, 1975(Sep), Vol 24(2), 207-214. In an experiment with 7 adult male White Carneaux pigeons, the maintenance of a response controlling the duration of positive and negative discriminative stimuli

in a multiple schedule was examined with respect to the possible consequences of the response: none, escape from the negative stimulus, production of the positive stimulus, and initiation of the reinforcement schedule associated with the latter. The last 2 seemed to be the major factors in producing and maintaining the response. Escape from the negative stimulus maintained it in most Ss, but only at a much lower level.—*Journal abstract*.

11562. Lobb, Brenda & Davison, M. C. (U Auckland, New Zealand) **Performance in concurrent interval schedules: A systematic replication.** *Journal of the Experimental Analysis of Behavior*, 1975(Sep), Vol 24(2), 191-197. —Trained 5 experienced homing pigeons on a variety of concurrent interval schedules that arranged reinforcements at either fixed or variable times after the last reinforcement. 2 measures were obtained: the number of responses on each schedule and the time spent responding on each schedule. Ratios of response rates on the 2 schedules did not equal ratios of reinforcement rates when both schedules were variable nor when 1 was variable and the other fixed. Ratios of times spent responding approximately equalled ratios of reinforcement rates when both schedules were variable but did not do so when one was fixed. (16 ref)—*Journal abstract*.

11563. Malagodi, E. F.; Webbe, Frank M. & Waddell, Thomas R. (U Florida) **Second-order schedules of token reinforcement: Effects of varying the schedule of food presentation.** *Journal of the Experimental Analysis of Behavior*, 1975(Sep), Vol 24(2), 173-181. —Conducted an experiment with 4 adult male Long-Evans hooded rats; 2 were experienced. In the initial link of a complex schedule, 1 discriminative stimulus was presented, and leverpressing produced tokens on FR schedules. In the terminal link, signaled by a 2nd discriminative stimulus, deposits of the tokens produced food. With 2 Ss, the terminal link was presented after each 6th component schedule of token reinforcement was completed. With the other 2 Ss, the terminal link was presented following the 1st component schedule completed after a FI. During the terminal link, each token deposit initially produced food. The schedule of food presentation was subsequently increased such that an increasing number of token deposits in the terminal link was required for each food presentation. Rates of leverpressing in the initial link were inversely related to the schedule of food presentation in the terminal link. Results are similar to those of experiments that have varied schedules of food presentation in chained schedules. Rates and patterns of responding controlled throughout the initial link were more similar to those ordinarily controlled by 2nd-order brief-stimulus schedules than to those controlled by comparable extended chained schedules. (29 ref)—*Journal abstract*.

11564. Maples, Ernest G.; Tomporowski, Phillip D. & Haraway, Maury M. (Northeast Louisiana U) **Contiguous approach conditioning: A model for negative reinforcement.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 851-856. Conducted a study with male Holtzman albino rats to provide an empirical basis for M. R. Denny's (1971) account of negative reinforcement by showing that stimuli contiguously paired with shock

termination can become conditioned elicitors of approach. 20 experimental Ss received 15 trials in which the onset of a light was paired with the termination of a 30-sec scrambled shock, independently of Ss' behavior. 20 control Ss received an equivalent number of light and shock presentations, but these were unpaired. On a single test trial, S was exposed to a light in 1 arm (randomly selected) of a modified T maze. 17 of 20 experimental Ss approached the light whereas only 11 of 20 control Ss did. The difference between proportions was significant ($p = .05$). *Journal abstract.*

11566. **Mellgren, Roger L.; Hunsicker, James P. & Dyck, Dennis G.** (U Oklahoma) **Conditions of preexposure and passive avoidance behavior in rats.** *Animal Learning & Behavior*, 1975(May), Vol 3(2), 147-151. In Exp I, 12 male albino rats given a 5-min period of preexposure (simple exploration) to a 2-compartment box showed poorer passive avoidance of the compartment where they were subsequently shocked than a control group of 12 Ss which was not preexposed to the apparatus. Exp II, with 32 rats, involved preexposure to sugared milk (SM), flashing light and loud noise (LN), or simply the apparatus (EC). One group received no exposure to the apparatus (NC). Following 1 shock trial, the groups were ordered $LN > NC > EC > SM$ from most to least passive avoidance. A control experiment, Exp III, with 28 rats, showed that differences between groups in Exps I and II could not be accounted for simply on the basis that the preexposure conditions were independently accounting for between-group differences, due to alterations in general exploratory tendencies or similar processes. Results are discussed in the context of latent inhibition and an averaging model of positive and negative events. *Journal abstract.*

11567. **Merigan, William H.; Miller, Jay S. & Gollub, Lewis R.** (U Maryland) **Short-component multiple schedules: Effects of relative reinforcement duration.** *Journal of the Experimental Analysis of Behavior*, 1975(Sep), Vol 24(2), 183-189. Exposed 4 adult male experienced White Carneaux pigeons to multiple VI 2-min VI 2-min schedules of food presentation in which relative duration of food presentation was manipulated. When components alternated every 5 sec and were scheduled on separate response keys, relative response rates closely matched relative reinforcement duration in 3 of 4 Ss. On the other hand, relative response rates were insensitive to relative reinforcement duration when components scheduled on a single response key alternated every 5 sec and when components scheduled on separate response keys alternated every 2 min. Thus, both rapid alternation and spatial separation of components were necessary to produce approximate matching of relative responding to relative reinforcement duration. This finding contrasts with previous findings that only rapid component alternation is necessary for matching when relative rate of reinforcement is manipulated (18 ref). *Journal abstract.*

11570. **Powell, Robert W. & Kelly, William.** (U South Florida) **A method for the objective study of tool-using behavior.** *Journal of the Experimental Analysis of Behavior*, 1975(Sep), Vol 24(2), 249-253. Shaped keypecking for food in 4 common crows within a conventional operant-conditioning test chamber. When pecking stabilized, a metal screen with openings 2.5 cm high by 1.0 cm wide was placed over the response key so that the S could still see but could no longer peck the key. At the same time, several dozen wooden matchsticks, which could be used to operate the key, were placed in the test chamber. Ss made no use of these during 50-75 hrs of exposure to this condition. Subsequently, the behavior of 2 Ss was shaped so that they approached the matchsticks, picked 1 up in their beaks, approached the response key with the matchstick in their beak, and finally operated the response key by poking the matchstick through the screen. This procedure was ineffective with the other 2 Ss. However, these Ss were successfully trained through positional fading of the tool. This involved suspending a metal rod from the ceiling so that it hung directly in front of the response key, and the S had only to peck it to operate the key. Then, the rod was gradually lowered by lengthening its tether until it eventually rested on the floor of the test chamber. The principal advantage of this methodology is the automatic recording of the terminal (tool-using) behavior under study. *Journal abstract.*

11571. **Prytula, Robert E.; Thomas, J. Dwight; Payne, James H. & Davis, Stephen F.** (Middle Tennessee State U) **RN transitions: Frustration, inhibition or aversion?** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 747-755. Three groups of male rats (9, 9, and 8 Ss, respectively) were trained and extinguished (Phase I) in an alley, and retrained and extinguished (Phases II and III) under rewarded nonrewarded (RN), nonrewarded-rewarded (NR), and rewarded-rewarded schedules. An exhaust system was operative in the alley in Phases I and III but inoperative in Phase II. Results show that with the simple schedules employed, odors did not appear to mediate the running responses. Ss which received the RN schedule were generally less resistant to extinction. Following Phase III, Ss in Group RN were retrained and extinguished under the NR sequence and Ss in Group NR were shifted to the RN sequence. Results show that if S received an NR sequence at some point in training, later behavior was much more influenced by this schedule than the previous RN sequence. It appears that RN schedules are aversive, perhaps like the "time-out" phenomenon. *Journal abstract.*

11573. Schwartz, Barry; Hamilton, Bruce & Silberberg, Alan. (Swarthmore Coll) **Behavioral contrast in the pigeon: A study of the duration of key pecking maintained on multiple schedules of reinforcement.** *Journal of the Experimental Analysis of Behavior*, 1975(Sep), Vol 24(2), 199-206.—Conducted an experiment with 4 male experienced Silver King pigeons. Pecks on an operant key were reinforced on either multiple VI or multiple VI extinction schedules of reinforcement. The stimuli that signaled the multiple-schedule components were located on a 2nd key (signal key), and a changeover delay prevented reinforcement of signal keypeck—operant keypeck sequences. No behavioral contrast was observed on the operant key, and appreciable responding on the signal key occurred during the VI component of the multiple VI extinction procedure. Peck durations on the signal key were markedly shorter than peck durations on the operant key. Moreover, most responses on the signal key occurred just after the multiple-schedule components changed. Data support an account of behavioral contrast in terms of the summation of pecks that are separately controlled by stimulus-reinforcer and response-reinforcer dependencies and suggest that the stimulus-reinforcer dependency is responsible primarily for local contrast. In addition, the data suggest that pecks that are controlled by these 2 dependencies may belong to topographically different classes. (22 ref)—*Journal abstract*.

11574. Sprott, Richard L. & Stavnes, Karen. (Jackson Lab, Bar Harbor, ME) **Effects of situational variables on performance of inbred mice in active- and passive-avoidance situations.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 683-692.—Conducted a group of experiments to assess the interaction between environmental factors and specific genetic loci upon the performance of 320 C57BL/6J and 320 DBA/2J (D2) male mice in avoidance learning situations. The performance of all Ss was better in passive- than in active-avoidance situations. The performance of C57BL/6J Ss was generally superior to that of DBA/2J Ss. C57BL/6J Ss usually avoided footshocks, while DBA/2J Ss attempted to escape them. DBA/2J Ss performed poorly in the presence of mild footshocks, while C57BL/6J Ss performed poorly in the presence of intense footshocks. Analysis of the data suggested that the loci involved probably exerted their influence by affecting the S's response to its environment. (15 ref)—*Journal abstract*.

11575. Squires, Nancy; Norborg, James & Fantino, Edmund. (Children's Research Ctr, Psychological Clinic, Champaign, IL) **Second-order schedules: Discrimination of components.** *Journal of the Experimental Analysis of Behavior*, 1975(Sep), Vol 24(2), 157-171.—Conducted 3 experiments with a total of 9 experienced White Carneaux pigeons. Ss were exposed to a series of 2nd-order schedules in which the completion of a fixed number of FI components produced food. In Exp I, brief (2-sec) stimulus presentations occurred as each FI component was completed. During the brief-stimulus presentation terminating the last FI component, a response was required on a 2nd key, the brief-stimulus key, to produce food. Responses on the brief-stimulus key before the last brief stimulus presentation had no scheduled consequences but served as a measure of the

extent to which the final component was discriminated from preceding components. Whether there were 1, 2, 4, or 8 FI components, responses on the brief-stimulus key occurred during virtually every brief-stimulus presentation. In Exp II, an attempt was made to punish unnecessary responses on the brief-stimulus key (i.e., responses on the brief-stimulus key that occurred before the last component). None of the Ss learned to withhold these responses, even though they produced a 15-sec timeout and loss of primary reinforcement. In Exp III different key colors were associated with each component of a 2nd-order schedule (a chain schedule). In contrast to Exp I, brief-stimulus key responses were confined to the last component. It is concluded that pigeons do not discriminate well between components of 2nd-order schedules unless a unique exteroceptive cue is provided for each component. The relative discriminability of the components may account for the observed differences in initial-component response rates between comparable brief-stimulus, tandem, and chain schedules. (35 ref)—*Journal abstract*.

11576. Thompson, Carl I. & Fitzsimons, Thomas R. (Pennsylvania State U, Hershey Medical Ctr) **Age differences in aversively motivated visual discrimination learning and retention in male Sprague-Dawley rats.** *Journal of Gerontology*, 1976(Jan), Vol 31(1), 47-52.—Trained 4 groups of 3-, 7-, 12-, and 24.5-mo-old Ss on a light-dark discrimination to a criterion of 11-12 consecutive correct initial choices, using footshock motivation. Eight days later they were retrained to the same criterion. Original learning and relearning rates were not correlated, but both decreased linearly with increasing age. O. S. Ray and R. J. Barrett (1973) reported that, while yr-old rats made fewer avoidances than younger ones on a shock-motivated discrimination, they appeared to have learned equally well, since there were no differences in number of correct initial responses. They suggested that avoidance scores may reflect performance factors and that learning decrements with age might not occur if the correct initial response measure were used. The present study demonstrates that this is not the case; when rats as old as 24.5 mo were tested there were clear age-related deficits in number of correct initial responses. 11577. Urcuioli, Peter J. & Nevin, John A. (Dalhousie U, Halifax, Canada) **Transfer of hue matching in pigeons.** *Journal of the Experimental Analysis of Behavior*, 1975(Sep), Vol 24(2), 149-155.—Trained 3 White Carneaux pigeons on a modified 3-key matching-to-sample procedure, in which only 1 comparison key (rather than 2) was lighted after an observing response to the center-key standard. Pecks on keys of matching comparison hues were reinforced. When nonmatching hues appeared as the initially lighted comparisons, the nonmatching hue terminated, and the matching hue appeared on the other side key only if the S did not peck the nonmatching comparison for 4.8 sec. Pecks to the nonmatching hue reset the 4.8-sec delay interval. 3 hues were used during acquisition. During transfer tests, 2 novel hues were substituted individually or together for 1 or 2 of the training hues. Latencies to the novel side-key hue were shortest when a novel matching hue appeared as the standard on the center key and were essentially identical

to baseline matching latencies. In contrast, when a novel hue appeared as either a standard or comparison in a nonmatching combination, latencies increased with increasing separation between the novel hue and the nonmatching hue. These transfer data demonstrate the concept of hue matching.—*Journal abstract.*

(U Victoria, Canada) **Effects of environmental variables.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 754.—In a sample of 20 studies (1953-1972) of open-field activity in pure strain mice, none had the same dimensions for the field and none used the same illumination levels. Recent investigations have indicated that open-field dimensions and illumination affect activity levels. Implications of non-standardizing of apparatus in relation to these 2 variables is discussed.

11580. Williams, Ben A. (U California, San Diego) **The blocking of reinforcement control.** *Journal of the Experimental Analysis of Behavior*, 1975(Sep), Vol 24(2), 215-226. Conducted 2 experiments with 12 mixed-breed and 16 White Carneaux pigeons to extend the blocking effect to the reinforcement of a response. A delayed reinforcement contingency was presented to Ss with or without a previously pretrained response available during the delay interval. The interpolated response had no scheduled effect on delivery of the reinforcer, but its availability reduced strengthening of the initial response, which completely extinguished for some Ss. Results are interpreted as support for blocking as a fundamental principle of behavior and as evidence against the principle of reinforcement being stated solely in terms of temporal proximity between response and reinforcer. 11586. Friedman, Mark B. (Carnegie Mellon U) **Visual control of head movements during avian locomotion.** *Nature*, 1975(May), Vol 255(5503), 67-69.—Carried out experiments with 3 Ring Doves (*Streptopelia risoria*) to dissociate the 3 factors most likely to control head movements during locomotion: (a) movement in the visual environment, (b) acceleration in the inertial (labyrinthian) environment; and (c) the mechanics of stepping. A specially designed cylindrical cage enabled the E to manipulate these factors. Altering the case conditions demonstrated the primacy of vision in generating and regulating the normal pattern of periodic eye and head movements in the Ss. Results held for both linear and angular movements. The fact that birds of diverse shape and mode of locomotion show similar patterns of movement has implications for theories of the evolution of visual perception.—*I. Davis.*

11587. Fukasawa, Teluyo; Lima, Marluce P. & Masur, Jandira. (Escola Paulista de Medicina, São Paulo, Brazil) **The behavior of genetically selected loser and winner-runway rats in different competitive situations.** *Behavioral Biology*, 1975(Nov), Vol 15(3), 333-342.—Studied the performance of a total of 126 Winner-Runway (WR) and Loser-Runway (LR) rats in a food-hole competition and in a labor-division situation. The WR Ss won most of the trials in the runway competition, but both groups had a similar performance in the food-hole test, indicating no correlation between the 2 procedures. When LR and WR Ss were paired in the labor-division task, the LR Ss performed most of the barpresses (workers), while the WR Ss received the reward almost without working (parasites). A 2nd experiment was carried out in which twice as many individual training sessions were given. Data show that at the last training trials WR and LR Ss were performing equally. When they were paired, although the results were in the same direction as in the previous experiment, the difference in the categorization in workers and parasites between WR and LR Ss was not significant.—*Journal abstract.*

11588. Green, Steven. (Rockefeller U, Field Research Ctr, Millbrook, NY) **Dialects in Japanese monkeys: Vocal learning and cultural transmission of locale-specific vocal behavior?** *Zeitschrift für Tierpsychologie*, 1975(Oct), Vol 38(3), 304-314. Detected by ear differences in vocalizations made during artificial feeding of monkey troops at 3 locations in Japan. Tape recordings and sound spectrographic analysis confirmed that a distinctive vocal pattern was specific to each site and was used only in the provisioning situation. The 3 different acoustic morphologies were variations on a shared tonal theme. Vocal learning may have occurred separately at each site regulated by species-wide constraints on vocalization. (German summary) (1 p ref) —*Journal summary.*

11589. Kassel, Jeffrey & Davis, Roger E. (U Michigan, Neuroscience Lab) **Early behavioral experience and adult social behavior in the paradise fish, *Macropodus opercularis* L.** *Behavioral Biology*, 1975(Nov), Vol 15(3), 343-351.—47 paradise fish were reared in isolation, with conspecifics, or cross-reared with nonconspecifics. As young adults, cross-reared Ss presented with live conspecific and mirror image stimuli performed social displays less frequently than controls, while isolates did not differ from controls. In a spawning trial, no differences were found between groups. Results suggest that experience with an alien species may reduce the readiness to perform species-specific social displays. (29 ref)—*Journal abstract*.

11590. Kinzey, W. G.; Rosenberger, A. L. & Ramirez, Marleni. (City Coll, City U New York) **Vertical clinging and leaping in a neotropical anthropoid.** *Nature*, 1975(May), Vol 255(5506), 327-328.—Reports more than 200 hrs of observations, in the Peruvian rain forest, of 9 pigmy marmosets, *Cebuella pygmaea*, the smallest New World monkey. Of 288 leaps observed, 85% were to and/or from a vertical supporting branch, and 57% of resting time (48 hrs observation) was spent clinging to vertical supports. The 4 adults spent an average of 97 min/day feeding on sap, their preferred food, scraping fissures in the tree bark with the teeth while clinging with clawed digits to the vertical tree trunk. The adaptive relationship between the morphology of *Cebuella* and its leaping and clinging behavior is discussed. Data suggest that in this and other species vertical clinging behaviors are postural adaptations, related to feeding and dependent on size of the support and location of the food source, while leaping behaviors are locomotor adaptations. (15 ref)—*I. Davis*.

11591. Lanier, David L.; Estep, Daniel Q. & Dewsbury, Donald A. (U Florida) **Copulatory behavior of golden hamsters: Effects on pregnancy.** *Physiology & Behavior*, 1975(Aug), Vol 15(2), 209-212.—Conducted 2 experiments to study the role of male copulatory behavior in initiating physiological responses necessary for pregnancy in female hamsters. In Exp I with 15 male and 24 female Syrian golden hamsters (*Mesocricetus auratus*), copulation beyond the 1st ejaculatory series was critical to attainment of maximal probabilities of pregnancy. Whereas all females became pregnant when mated to a criterion of sexual satiety, only 20% were pregnant after 1 ejaculatory series. The relationship between increased copulatory stimulation and increased probability of pregnancy was further refined in Exp II with 63 females and 20 males. Females required more than 4 ejaculatory series to maximize the probability of pregnancy. Mounts without intromission had no effect. Neither parturition, number of ova shed, nor litter size appeared affected by amount of copulatory stimulation. A coadaptation between the copulatory pattern of the males and the response systems of the females of several rodent species appears to have evolved and to aid successful reproduction. (25 ref)—*Journal abstract*.

11592. Laughlin, Michael E.; Donovick, Peter & Burright, Richard G. (State U New York, Binghamton) **Consummatory behavior in meadow voles (*Microtus pennsylvanicus*) and mongolian gerbils (*Meriones uigulatus*).** *Physiology & Behavior*, 1975(Aug), Vol 15(2),

185-189.—Measured consumption of water and adulterated fluids under choice and no-choice situations in 10 voles and 12 gerbils. Voles consumed more water throughout and were clearly less able to tolerate challenges presented by adulteration of available solutions in the no-choice situation. Intake of both species under choice conditions was more affected (although differentially) by fluid adulteration than it had been when no choice was available. Male and female differences were noted but typically these differences were in magnitude rather than direction of the consummatory response. Data illustrate the need for comparative studies and careful specification of stimulus conditions surrounding testing so that general principles of physiological and behavioral regulation can be separated from species-specific differences.—*Journal abstract*.

11594. Norton, Stata; Culver, Bruce & Mullenix, Phyllis. (U Kansas Medical Ctr, Kansas City) **Development of nocturnal behavior in albino rats.** *Behavioral Biology*, 1975(Nov), Vol 15(3), 317-331.—Monitored activity of 200 male and female Charles River rats in a residential maze equipped with photocells for recording passage through the corridors. Ss were more active in the 12-hr dark portion of a day than in the 12-hr light portion from an early age. Ss weaned at 23 days of age showed significantly greater activity at night than during the day but the maximum nocturnal-diurnal ratio was recorded in Ss 2-4 mo old. Although females older than 5 wks were more active than males both during the light and dark cycle, the nocturnal-diurnal activity ratios showed the same trends in the 2 sexes. Males differed from females in the duration of exploratory activity when introduced into the maze. Females were consistently much more active during the 2nd hr in the maze but the differences between the sexes in activity during the 1st hr were not as great. Data indicate that social interaction is not a primary cause of the nocturnal activity. (19 ref)—*Journal abstract*.

(Memorial U, St John's, Canada) **Failure of Sprague-Dawley rats to transfer taste-aversions or preferences by odor-marking the spout.** *Behavioral Biology*, 1975(Nov), Vol 15(3), 383-387.—In most studies of feeding behavior, a bottle of test solution is not used more than once due to the possibility that rats will mark the spout with an odor, so that if the bottle is presented again to other rats, they will respond to the odor-marking. An attempt was made to demonstrate odor-marking and the results were strikingly negative.

11597. Petrinovich, Lewis; Patterson, Thomas & Peeke, Harmon V. (U California, Riverside) **Reproductive condition and the response of white-crowned sparrows (*Zonotrichia leucophrys nuttalli*) to song.** *Science*, 1976(Jan), Vol 191(4223), 206-207.—Results of a study with 33 white-crowned sparrows show that Ss pattern of responses to playback of recorded song

depended on whether the female had eggs, nestlings, or fledglings, and on the behavior under consideration. These patterns can be understood in the context of the behavior patterns appropriate during each of the different stages of the reproductive cycle.

11598. **Polsky, Richard H.** (U Leicester, England) **Developmental factors in mammalian predation.** *Behavioral Biology*, 1975(Nov), Vol 15(3), 353-382.—Discusses 3 questions relating to the ontogeny of mammalian predation. The 1st question deals with the problem of genetics; evidence from selective breeding programs and strain comparisons in various domestic rodent species suggests that genotype probably plays some role. To determine if predation is characteristic of the species (the 2nd question) evidence from the neurophysiological literature is discussed which shows that for the species tested, mostly rats and cats, practically all would kill when stimulated or ablated in the proper brain region. It is concluded that all predators possess a potential to predate and whether this potential manifests itself is partly determined by what the individual experiences during ontogeny. To answer the 3rd question, the role of experience in predation, theory and empirical results from the psychological and ethological literature were dichotomized into that which occurred either before or after the test situation. Evidence indicates that experience either enhances or suppresses the tendency to predate or increases the efficiency in which the kill is made. An epigenetic approach to this subject is favored over those involving innate or learned behaviors. (4% p ref)—*Journal abstract*.

11599. **Schott, Dittmar.** (Max-Planck-Inst für Psychiatrie, Abteilung für Verhaltensforschung, Munich, W Germany) **Quantitative analysis of the vocal repertoire of squirrel monkeys (*Saimiri sciureus*).** *Zeitschrift für Tierpsychologie*, 1975(Oct), Vol 38(3), 225-250.—The vocal communication of 19 captive (3 to a cage) squirrel monkeys was analyzed into 52 individual call types. Two noteworthy findings appeared: (a) The vocal repertoire does not consist of discrete call types, as assumed up to now, but of graded ones. (b) The Ss could not be differentiated as individuals on the basis of any particular characteristic of their calls, (i.e., frequency, duration, intensity, or relationship between fundamental frequencies and overtones). It is concluded that the distribution into 52 call types is not necessarily biologically significant. (37 ref) — *P. J. Capretta*.

11600. **Wakerley, J. B. & Drewett, R. F.** (ARC Inst of Animal Physiology, Cambridge, England) **Pattern of sucking in the infant rat during spontaneous milk ejection.** *Physiology & Behavior*, 1975(Sep), Vol 15(3), 277-281. Describes 2 methods for measuring the sucking of rat pups on the nipples of the mother. The 1st uses pressure recording of the cannulated teatduck, the 2nd uses direct observation of sucking behavior. In Exp I, pressure recordings of the sucking of individual Wistar-derived rat pups on the nipple showed that between milk ejections the pups sucked intermittently in bursts. During milk ejection itself there was a longer period of vigorous and continuous sucking. In Exp II, behavioral observations on the level of sucking in whole litters of pups showed that the background bursts of sucking from the litter as a whole were randomly

distributed in relation to the inferred time of oxytocin release. Results indicate that once the pups are sucked on the nipples, variations in the sucking behavior of the litter have no role in the timing of milk ejections in the mother.—*Journal abstract*.

11601. **Waser, Peter M.** (Rockefeller U, Field Research Ctr) **Experimental playbacks show vocal mediation of intergroup avoidance in a forest monkey.** *Nature*, 1975(May), Vol 255(5503), 56-58.—Reports the response of adult male gray-cheeked mangabey monkeys (*Cercocebus albigena*), belonging to 2 groups in the Kibale Forest Reserve of western Uganda, to playback of recorded vocalizations termed "whoopgobbles." Of 2 observers in radio contact, one followed the test group and one operated the playback equipment. Differences in response measures, tests manipulating playback site rather than test group location, and observations of group movements and actual encounters, all supported the conclusion that response to whoopgobbles was a function of distance but not of position relative to the home range center. The finding that response did not vary with location was unexpected. Further use of playback techniques for studying how primate groups divide space among themselves is recommended.—*I. Davis*.

11602. **Whitney, Carl L. & Krebs, John R.** (U British Columbia, Inst of Animal Resource Ecology, Canada) **Mate selection in Pacific tree frogs.** *Nature*, 1975(May), Vol 255(5506), 325-326.—Reports field observations indicating that females of *Hyla regilla* preferred certain males, designated "bout leaders," who called more actively than other males; i.e., they initiated bouts of calling, were the last to stop calling, called faster and louder, and were more likely to call during periods other than bouts. In laboratory experiments, 14 out of 18 females chose bout leaders even when they gave the same call as other chorus members. Postmortem studies of the abdominal muscles did not support the hypothesis that males stop calling because of muscular fatigue, and the question of why frogs do not call continuously remains unanswered. The evolutionary questions raised by these observations are discussed.—*I. Davis*.

11603. **Winfree, Arthur T.** (Purdue U) **Unclocklike behaviour of biological clocks.** *Nature*, 1975(Jan), Vol 253(5490), 315-319.—Describes the search for mechanisms which could underlie circadian rhythms (CRs), and expresses doubts that any unique mechanism of some universal biological clock will be found. The phase of a CR is labile: it can be temporarily or permanently reset by variations of environmental phases, particularly the light/dark cycle. Studies of phase disruption have led to 3 models of the mechanism of biological rhythms: (a) a simple clock, (b) a limit-cycle oscillator, and (c) a relaxation oscillator. Each model is discussed in terms of the experimental observations for which it does not provide interpretations. For some researchers, the overt desynchronization of CRs among the cells and organs of higher plants and the splitting of activity rhythms in insect and vertebrate species indicate that organisms resemble a clockshop more than a clock. Three ways to account for the unclocklike peculiarities encountered in CRs are suggested, and the possible role of biological

rhythms in natural selection is discussed. (88 ref)—*I. Davis.*

PHYSIOLOGICAL PSYCHOLOGY

11604. Barham, R. M. & Boersma, F. J. (U Otago, New Zealand) **Orienting responses in a selection of cognitive tasks.** Rotterdam, Netherlands: Rotterdam U Press, 1975. xiii, 154 p.—Reports the results of an investigation of relationships among selected components of the orientation reaction. Literature on the reaction is reviewed, the rationale, hypotheses, and methods of the study are stated, and the results of substudies of GSR, pupillary response, and eye movements are reported and discussed.

11605. Blalvas, A. S. (USSR Academy of Sciences, Inst of Higher Nervous Activity & Neurophysiology, Moscow) [Visual analysis in the retinal receptive fields as an orthogonal series expansion.] (Russ) *Neurophysiology*, 1974(Mar-Apr), Vol 6(2), 211-218.—Developed a physiologically-based mathematical model of retinal receptive fields in human Ss from experimental neurophysiological data. The model gives a nondynamic approximation of data obtained from visual analysis in retinal receptive fields; describes, mathematically, on off types and disinhibitory zones within receptive fields; and predicts explorations for unusual results needing experimental confirmation. Two main assumptions underlying the predictive features of this model are (a) that retinal receptive fields have round or elliptical concentric forms, and (b) that spatial filtration takes place in the receptive field. Some of the mathematical operations required to operationalize the predictive validity of this model are orthogonal series expansions using Jacobi polynomial series and Fourier trigonometric series. These operations allow for data analysis of the obtained neurophysiological results and an hypothesized "square interpolation" of the retinal images realized by the retinal receptive fields. (English summary) (16 ref)—*L. Majovski.*

11606. de Feudis, Francis V.; Madtes, Paul & Camacho, Juan G. (Centro Nacional "Ramón y Cajal" y Facultad de Medicina Autónoma, Madrid, Spain) **Binding of glycine and γ -aminobutyric acid to synaptosomal fractions of the brains of differentially-housed mice.** *Experimental Neurology*, 1976(Jan), Vol 50(1), 207-213. Synaptosomal fractions, prepared from the brains of weanling male Swiss albino mice which had been differentially housed (isolated vs aggregated) for 8-10 wks, differed in their capacities to bind the inhibitory neurotransmitter suspects, glycine and γ -aminobutyric acid (GABA). These environmentally induced changes were shown at 0° C in a buffered physiological medium. The binding of both glycine and GABA (1.2×10^{-6} M) to these particles was decreased in the presence of 10^{-6} and 10^{-5} M strychnine- SO_4 . Results provide evidence that changes in cerebral synaptic morphology caused by environmental modification can be demonstrated by measuring the binding of possible inhibitory neurotransmitters. Hence, the binding of these substances appears to occur by adaptable, plastic processes. (23 ref)—*Journal abstract.*

11607. Garver, David L. & Sladek, John R. (Illinois State Psychiatric Inst, Chicago, IL) **Monoamine distribution in primate brain. II. Brain stem catecholaminergic pathways in *Macaca speciosa* (artoides).** *Brain Research*, 1976, Vol 103(1), 176-182.—Reports data on the course of preterminal catecholaminergic axons through the brainstem of 2 adult, 2 12-wk-old infant, and 2 24-hr-old neonate stump-tailed monkeys. Results confirm the anatomical distinctiveness of the ventral and dorsal noradrenergic pathways in the brainstem of a species in which complex affiliative and solitary behaviors can be studied and suggest implications for the study of the correlation between neurotransmitter system activity at specific terminal sites and complex behavioral patterns. (30 ref)

11608. Knirk, Frederick G. & Spindell, William A. (U Southern California) **Indirect (biofeedback) measurement in instructional technology.** *Educational Technology*, 1975(Jun), Vol 15(6), 33-35.—Describes a number of biological measures which may provide useful data about human learning. These indices include EEGs, EKGs, GSR, heart rate, blood pressure, voice prints, and blood chemistry. Measurements are generally related to stress reactions and arousal level.—*C. B. Kreitzberg.*

11609. Pickles, J. O. (The Medical School, Neurocommunications Research Unit, Birmingham, England) **Normal critical bands in the cat.** *Acta Oto-Laryngologica*, 1975(Sep-Oct), Vol 80(3-4), 245-254.—Used a behavioral psychophysical method to measure the critical bands in approximately 32 cats. Pure tones were masked by noise of variable bandwidth but constant total power, geometrically centered on the test tone; the point at which the masked threshold began to fall as the masker bandwidth was increased estimated the critical bandwidth. At 2 kHz the critical bandwidth was also measured from the wideband masked thresholds of both tones and noise of variable bandwidth; this produced the same result as the 1st method. The measured critical bandwidth was greater than previously published values of the effective bandwidths of single fibers of the auditory nerve. The results do not support the commonly accepted theory that the critical band represents the resolution of the cochlea. (30 ref) *Journal abstract.*

11610. Roseman, Jeffrey M. & Buckley, C. Edward. (Duke U. Ctr for the Study of Aging & Human Development) **Inverse relationship between serum IgG concentrations and measures of intelligence in elderly persons.** *Nature*, 1975(Mar), Vol 254(5495), 55-56.—Studied 2 groups of healthy persons aged 45 yrs or older. Sample 1 had 97 Ss (mean age 79 yrs) from a total of 268 in a longitudinal study (begun in 1957). Ss had been administered the 11 subtests of the WAIS, and in 1967 assessment began of serum concentrations of IgG, IgA, and IgM. Retrospective evaluation in 1973 revealed a significant negative correlation for all sample subgroups between WAIS scores and serum IgG levels; correlations for IgA and IgM were not significant. Regression analyses examined the effects on the negative correlations of age, sex, race, health, and training, and confirmed that IgG made a significant contribution. 468 White Ss in Sample 2 (mean age 58.5 yrs) were given 4 WAIS subtests and the same immune levels measured. IgG and IgA levels were significantly correlated, and

both showed a negative correlation with WAIS scores. Possible reasons for the various correlations and for the differences shown between the older Ss (Sample 1) and the younger Ss (Sample 2) are discussed.—*J. Davis.*

11611. Selmanoff, M. K.; Jumonville, J. E.; Maxson, S. C. & Ginsburg, B. E. (U Connecticut) **Evidence for a Y chromosomal contribution to an aggressive phenotype in inbred mice.** *Nature*, 1975(Feb), Vol 253(5492), 529-530.—Measured aggressiveness between pairs of male mice of 2 strains, DBA/1/Bg and C57BL/10/Bg, and their reciprocal hybrid offspring, using 20 pairs in 1 experiment and 63 pairs in a replication. The DBA/1/Bg mice and males sired by them were more aggressive than C57BL/10/Bg mice and their male offspring. In both experiments the reciprocal differences between aggression scores were in the same direction and the mid-parental values were the same. Maternal and environmental conditions did not appear to make any major contribution to the aggressive behavior of these strains and hybrids. It is suggested that the reciprocal differences in aggressiveness are the result of reciprocal differences in the origin of the Y chromosome. (19 ref)—*J. Davis.*

11612. Stein, Larry. (Wyeth Lab, Philadelphia, PA) **Norepinephrine reward pathways: Role in self-stimulation, memory consolidation, and schizophrenia.** *Nebraska Symposium on Motivation*, 1974, No 22, 113-159.—Neurons containing norepinephrine (NE) form pathways that match results of self-stimulation mapping studies. The dorsal pathway supports high rates of self-stimulation, the ventral pathway's role is disputed, and the newly discovered periventricular pathway is involved in feeding and interactions with pain and punishment systems. Postmortem enzyme studies of brains showed a significant reduction in dopamine β -hydroxylase activity in schizophrenics compared to accident and heart attack victims, possibly due to a general pathological condition of NE neurons. Therapeutic implications are noted. (115 ref)—*J. M. Roberts.*

Neurology & Electrophysiology

11613. Armington, John C. (Northeastern U) **Spectral sensitivity of low level electroretinograms.** *Vision Research*, 1976(Jan), Vol 16(1), 31-35.—Made a 3-way comparison of the spectral sensitivity of the human electroretinogram (ERG) obtained with alternating stimuli, of the spectral sensitivity of responses elicited by flashing stimuli, and of a psychophysical determination of spectral sensitivity. The comparisons were made at low levels of adaptation in 3 Ss with normal vision. Responses to alternating stimuli had a sensitivity which closely matched the psychophysical data and were scotopic, but flashing stimuli elicited ERGs with high short-wave length sensitivity. Results show that alternating stimuli may be used to obtain scotopic ERGs free of complications introduced by stray light.—*Journal abstract*

11614. Beaton, Randal & Miller, Josef M. (Washington State U) **Single cell activity in the auditory cortex of the unanesthetized, behaving monkey: Correlation with stimulus controlled behavior.** *Brain Research*, 1975, Vol 100(3), 543-562.—Examined neural activity of 60 cells in the auditory cortex of 2 rhesus monkeys in relation to

systematic variations in cued reinforcement conditions. Ss were trained on a form of an auditory reaction time (RT) task. In the final behavioral paradigm, Ss were rewarded for rapid key releases to all tonal stimuli in 1 reinforcement condition (frequency irrelevant; FI), while in the other condition (frequency discrimination; FD) releases to certain tonal test frequencies were unrewarded. RTs to identical tonal test stimuli were longer and more variable in the FD condition. Of the auditory cells evaluated, 25% showed definite and repeatable alterations in evoked activity to the same tonal stimulus which were correlated with reinforcement condition. Reinforcement increased on-excitatory responses in the FD condition. No cells showed changes in spontaneous discharge rates as a function of reinforcement. Results suggest that the activity of a sample of auditory cortical neurons depends on the behavioral state of the preparation. The usefulness of the concept of behavioral state for neurophysiologists is discussed. (24 ref)—*Journal abstract.*

11615. Büttner, U. & Henn, V. (U Zurich, Switzerland) **Thalamic unit activity in the alert monkeys during natural vestibular stimulation.** *Brain Research*, 1976, Vol 103(1), 127-132.—Recorded cell activity in 2 rhesus monkeys during natural vestibular stimulation; Ss, sitting upright, were either sinusoidally rotated about the vertical axis in the dark, or exposed to a moving visual field. Results support earlier findings that part of the nucleus ventro-posterior inferior acts as a relay nucleus on a presumed vestibular-cortical pathway and suggest that the ascending vestibular activity is involved in posture control and motion perception. (15 ref)

11616. Chartock, Howard E.; Glassman, Paul R.; Poon, Leonard W. & Marsh, Gail R. (U California, Berkeley) **Changes in alpha rhythm asymmetry during learning of verbal and visuospatial tasks.** *Physiology & Behavior*, 1975(Aug), Vol 15(2), 237-239.—Examined alpha activity in the 2 cortical hemispheres in 12 18-30 yr olds during learning and overlearning of a verbal and a visuospatial task. Compared to a pretask baseline condition, the amount of alpha activity during the tasks was decreased. An increase in alpha activity was found from learning to overlearning in both hemispheres for both tasks. A greater amount of alpha was found in the right hemisphere for both tasks. No difference in the degree of alpha asymmetry was found between the tasks. A significant positive correlation was found between change in learning rate and change in alpha asymmetry during the verbal task. An interpretation of this finding is offered in terms of the level of hemispheric activation reflecting the degree of task engagement.—*Journal abstract.*

11617. Gallistel, C. R. (U Pennsylvania) **Motivation as central organizing process: The psychophysical approach to its functional and neurophysiological analysis.** *Nebraska Symposium on Motivation*, 1974, No 22, 183-250.—Functional units of sensorimotor coordination are restructured in their hierarchy by reinforcement rather than by the creation of new units. Motivational processes potentiate and inhibit lower-level mechanisms of sensorimotor coordination, thus leading to overall coherence and direction in behavior. Psychophysical methods in neurophysiology, motivation and reinforce-

ment in self-stimulation, recovery from refractoriness, the strength-duration curve, and temporal summation are discussed. Data on pharmacological effects on the substrate for reinforcement are given. Three effects on self-stimulation are considered: priming (potentiating), analgesic (inhibiting), and grooming (displacement activity). (106 ref)—*J. M. Roberts.*

11619. **Hammond, P.; Andrews, D. P. & James, C. R.** (U Keele, England) **Invariance of orientational and directional tuning in visual cortical cells of the adult cat.** *Brain Research*, 1975, Vol 96(1), 56-59.—Analyzed directional (D) and orientational (O) tuning of several hundred cells in areas 17 and 18 of the adult cat's visual cortex, whose receptive fields lay up to 15° from the projections of the areae centrales. Findings of invariance in both tuning aspects support the conclusion that gross shifts of D and O tuning are not features of cells in these areas. (17 ref)

11620. **Isabekova, S. B.** (USSR Academy of Sciences, Inst of Evolutionary Morphology & Animal Ecology, Moscow) **[Electrophysiological analysis of the cortical-tectal connections in the turtle.]** (Russ) *Neurophysiology*, 1974(Mar-Apr), Vol 6(2), 127-134.—Studied the characteristics of evoked potentials of the cortical-tectal fibers in the turtle's forebrain. Results showed the influence of gamma-aminobutyric acid on the tectum opticum potentials, evoked by stimulation of the dorsal cortex and visual nerve. The efferent pathway leading from the general cortex to the tectum opticum shows signs of a polysynaptic structure which is affected under the experimental conditions tested. (English summary) (15 ref)—*L. Majovski.*

11621. **Jacobs, Barry L. & Kleinfuss, Harry.** (Princeton U) **Brain stem and spinal cord mediation of a serotonergic behavioral syndrome.** *Brain Research*, 1975, Vol 100(2), 450-457.—Used male Sprague-Dawley rats to examine the levels of neuraxis that mediate the various component signs of the behavioral syndrome seen in rats that is caused by pharmacological treatments that produce increased synaptic serotonin or increased stimulation of postsynaptic serotonin receptors. Data indicate that the syndrome, which is characterized by hyperreactivity, hyperactivity, resting tremor, rigidity, reciprocal forepaw treading, hindlimb abduction, and lateral head weaving, is mediated by neural mechanisms present in the pons, medulla, and spinal cord. Implications for the development of a model of the action of serotonin in the CNS are noted.

11622. **Kusske, J. A. et al.** (VA Hosp, Neurosurgery Section, Long Beach, CA) **Somatosensory evoked responses and slow potential oscillations in human scalp recordings.** *Physiology & Behavior*, 1975(Aug), Vol 15(2), 241-244.—Averaged evoked responses obtained from the frontal, parietal, and vertex regions, by electrical stimulation of the median nerve or common peroneal nerve in 10 23-62 yr old Ss, indicated the presence of time locked components which occur as late as 500-3,500 msec after the stimulus. Spectral analysis showed that these components were distributed mostly in the 1.5-2 and 3.6-4 Hz frequency bands, and their

presence in the evoked response may have been due to the driving, by the stimuli or oscillations of similar frequencies which can be seen in the spontaneous activity recorded from the same region.—*Journal abstract.*

11623. **Küppers, Egon.** [Three basic kinds of behavior, a scheme of their neurobiological correlates.] (Germ) *Archiv für Psychiatrie und Nervenkrankheiten*, 1975, Vol 220(2), 117-129.—Discusses the psychic sphere as the source of meaningful behavior carried out for the body's cell community. Three fundamental types of behavior (the purely practical, the theoretical-practical, and the purely theoretical) are distinguished, each having different reasons for being: determining, motivating, and supporting. Possible neurobiological bases of human behavior are depicted in a schematic figure showing the relation of cerebral centers and sensorimotor functions of the human face, including eye movements. The psychic center may be located in the thalamus, and the areas of the central sulcus are regarded as an objectivation zone. This indicates that the motor zones of the cortex, including the frontal adversive fields, are intention zones, and the sensory zones are reproduction, expectation, and recollection zones. This conceptualization is used to explain decision-making, foresight, and learning.—*English summary.*

11624. **Leventhal, Audie G. & Hirsch, Helmut V.** (State U New York, Ctr for Neurobiology, Albany) **Cortical effect of early exposure to diagonal lines.** *Science*, 1975(Nov), Vol 190(4217), 902-904.—A study with 12 cats showed that neurons in the visual cortex that respond preferentially to diagonal contours were present only in the 8 Ss exposed to diagonal lines early in life. In contrast, cells that prefer horizontal or vertical contours were found following exposure to horizontal, vertical, and diagonal lines. It is suggested that such cells do not require a specific visual input for maintenance or for development; neurons responding preferentially to diagonal lines do.—*Journal abstract.*

11626. **Russell, W. Ritchie & Dewar, A. J.** (MRC Brain Metabolism Unit, Royal Edinburgh Hosp, Scotland) **Explaining the brain.** New York, NY: Oxford U Press, 1975. x, 157 p. \$4.—Briefly outlines data concerning the brain: its structure, functioning, some of its disorders, damage to which it is subject, sight, language, and memory, with mention of some of the drugs that affect the brain.

11627. **Satoh, Toyohiko & Kanamori, Norio.** (Aichi-Gakuin U, School of Dentistry, Nagoya, Japan) **Reticulo-reticular relationship during sleep and waking.** *Physiology & Behavior*, 1975(Sep), Vol 15(3), 333-337.—Investigated the mode of interaction between so-called sleep-waking centers during different phases of consciousness in the cat. Results show that most sleep-waking centers are not simply engaged in the realization of a single phase but operate during different phases in dynamic relationship with other centers. (25 ref)

11628. Schechter, P. B. & Murphy, E. H. (U Chicago, Committee on Biopsychology) **Response characteristics of single cells in squirrel monkey frontal cortex.** *Brain Research*, 1975, Vol 96(1), 66-70.—Determined response characteristics of single cells in the prearcuate polysensory area to visual, auditory, and tactile stimuli. Results show that only about 10% of the units in the prearcuate cortex of the paralyzed squirrel monkey are driven by simple sensory stimuli.

11629. Scobey, R. P. & Horowitz, J. M. (U California Medical School, Neurophysiology Lab, Davis) **Detection of image displacement by phasic cells in peripheral visual fields of the monkey.** *Vision Research*, 1976(Jan), Vol 16(1), 15-24.—Impulse histograms for monkey phasic ganglion cells were measured in 67 units from 16 rhesus monkeys following either the rapid displacement of a small luminous spot or an incremental change in intensity of the same spot. Phasic cells responded with a short burst of action potentials during a 100-msec interval. The smallest distance that the luminous spot must move to evoke a brief audible increase in the ongoing neural activity, the displacement threshold, was found to be less than human thresholds at equivalent retinal sites. Analytic expressions are given for receptive field sensitivity profiles to stationary flashing light, and for the displacement thresholds through the receptive fields. (31 ref)—*Journal abstract*.

11630. Sherman, S. Murray; Wilson, J. R. & Guillery, R. W. (U Virginia) **Evidence that binocular competition affects the postnatal development of Y-cells in the cat's lateral geniculate nucleus.** *Brain Research*, 1975, Vol 100(2), 441-444.—Presents data from 4 experiments with kittens which suggest that the development of geniculate Y-cells is controlled to some extent by a binocular competitive interaction of the geniculocortical connections and of aspects of visually guided behavior. Results allow a distinction to be made between the effects of deprivation itself and those that are due to the effect that the deprivation has on binocular balance.

11631. Stryker, Michael P. & Sherk, Helen. (Harvard U, Medical School, Boston) **Modification of cortical orientation selectivity in the cat by restricted visual experience: A reexamination.** *Science*, 1975(Nov), Vol 190(4217), 904-906. Recent reports have stated that the orientation selectivity of cells in the cat's visual cortex can be biased by limiting the early visual environment to stripes of one orientation. Data obtained from 7 kittens using systematic and quantitative sampling of preferred orientation, together with a blind procedure, do not show a bias toward the orientation presented in one type of restricted rearing environment. —*Journal abstract*.

11632. Stürzebecher, E.; Wernecke, K.-D. & Wagner, H. (Humboldt-U Berlin, HNO-Klinik, E Germany) **[ERA characteristics of normal-hearing persons.]** (Germ) *Acta Oto-Laryngologica*, 1975(Sep Oct), Vol 80(3-4), 294-300. The evoked response audiometry characteristics were measured in normal-hearing adults in 3 age groups (20-25, 30-50, and 50-70) at frequencies of 50 Hz, 1,000 Hz, and 4,000 Hz. No significant differences of amplitudes and latencies could be found between the age groups. (English summary)

11633. Weinberger, Norman M.; Oleson, Terrence D. & Ashe, John H. (U California, School of Biological

Sciences, Irvine) **Sensory system neural activity during habituation of the pupillary orienting reflex.** *Behavioral Biology*, 1975(Nov), Vol 15(3), 283-301.—Studied the role of sensory system evoked activity in the habituation of the orienting reflex by simultaneously recording multiple unit activity and pupillary responses to repeated tactile and acoustic stimulation. 8 adult cats with chronic electrodes in the somatosensory and auditory systems were tested during neuromuscular paralysis. Both tactile stimulation (% sec) and acoustic stimulation (1/min) resulted in habituation of the pupillary dilation component of the orienting reflex which was accompanied by decrements in somatosensory and auditory system evoked activity. The cochlear nucleus was unresponsive to tactile stimulation and did not exhibit response decrements during acoustic stimulation. Background activity increased in the auditory cortex during tactile habituation and in the somatic cortex during auditory habituation. Results indicate that systematic decrements in sensory evoked multiple unit activity could be of functional significance to the habituation of the orienting reflex and that specific effects upon sensory cortex do develop during behavioral habituation. (31 ref)—*Journal abstract*.

11634. Winson, Jonathan. (Rockefeller U, New York, NY) **Hippocampal theta rhythm. II: Depth profiles in the freely moving rabbit.** *Brain Research*, 1976, Vol 103(1), 71-79.—Investigated depth profiles of hippocampal theta rhythm in 20 male New Zealand freely moving rabbits during 3 behavioral conditions: REM sleep, voluntary movement, and during sensory stimulation applied to the motionless S. Profiles were the same in all 3 conditions. Dorsal microelectrode penetration of the dorsal hippocampus revealed a 22 uniform amplitude of theta rhythm in strata oriens and pyramdale of CA₁. Further microelectrode advancement revealed a sharp reversal of phase and a coincident null in amplitude in the proximal stratum radiatum. There was also a peak of theta rhythm amplitude which occurred in the molecular layer of the dorsal blade of the dentate gyrus. Data imply that there are 2 generators of theta rhythm in the dorsal hippocampus, one in the dentate gyrus and the other in the overlying CA₁ layer. Data also indicate the existence of a species difference in generating systems between the rabbit and the rat. (22 ref)—*Journal abstract*.

Physiological Processes

11635. Anisman, Hymie. (Carleton U, Ottawa, Canada) **Time-dependent variations in aversively motivated behaviors: Nonassociative effects of cholinergic and catecholaminergic activity.** *Psychological Review*, 1975(Sep), Vol 82(5), 359-385. The role of acetylcholine and central catecholamines in modulating aversively motivated behaviors, and behavior following exposure to uncontrollable stressors, is evaluated. It is suggested that in the presence of adequate associative processes, nonassociative factors mediated by stress-induced neurochemical changes determine avoidance response rate. In addition to the existence of a balanced state between excitatory catecholamine and inhibitory cholinergic systems, it is posited that these neurochemical systems may be mutually regulatory. Excessive stimulation of

one system may induce a compensatory antagonistic rebound in the complementary system, thereby maintaining neurochemical homeostasis. Owing to time-dependent variations in neurotransmitter activity, temporal variations in performance may occur following initial exposure to aversive stimulation. Alterations in neurochemical activity that affect nonassociative processes have predictable effects on time-dependent variations in avoidance performance. The model is extended to deal with other stress-related phenomena (e.g., helplessness, depression, and ulceration). (7 p ref)—*Journal abstract*.

11636. Blass, Elliott M. (Johns Hopkins U) **The physiological, neurological, and behavioral bases of thirst.** *Nebraska Symposium on Motivation*, 1974, No 22, 1-47.—Discusses primary drinking behavior (drinking precipitated by lack of body water in a major fluid compartment). Secondary drinking is defined but not discussed. Data are presented on rats who were nephrectomized, injected with solutions (polyethylene glycol, sucrose, urea, hypertonic saline, etc), water-deprived, neurologically altered, with clamped stomachs, or hypovolemic. The double-depletion hypothesis (cellular vs extracellular depletion) is analyzed and discussed. (82 ref)—J. M. Roberts.

11637. Bourgeois, M. (U Bordeaux, France) [Menopause: Psychological and psychiatric aspects.] (Fren) *Annales Médico-Psychologiques*, 1975(Oct), Vol 2(3), 449-487.—Summarizes the biological and psychological phenomena associated with menopause, identifying those changes which are primarily hormonal, psychological, cultural, or psychopathological. Although there is a general acknowledgement in psychiatry of the biological and psychological importance of the changes that menopause brings, the attitudes prevailing appear to be founded as much on folklore as on scientific or medical evidence. A compendium of the literature is presented, pertaining to the psychological (including the social and cultural as well as the psychodynamic) and biological aspects of the change-in-life (i.e., affective and somatic problems, reduced sexuality, and the not infrequent appearance of a marked depression or other form of psychopathology). Treatment by hormonal therapy can reduce many complaints effectively, exerting an influence at the magical (the promise of "renewed youth") as well as a biological level. No "cure" is possible, for there is no "disease," only the need for an important adjustment not unlike that of puberty. A medical-hormonal attenuation of the more severe aspects of menopausal change may help to gain the time needed to accomplish the social, interpersonal, economic, and cultural tasks that menopause imposes. (32 ref)—H. E. King.

11641. Kruger, Philip B. (State U New York, Coll of Optometry, New York) **Luminance changes of the fundus reflex.** *American Journal of Optometry & Physiological Optics*, 1975(Dec), Vol 52(12), 847-861.—Developed a recording retinoscope to measure the luminance of the fundus reflex during problem-solving tasks; 10 optometry students served as Ss. The luminance of the reflex was recorded while Ss read 5 passages of graded reading material and performed an addition task. A reversal design was used to determine the effects of pupil changes and accommodation on changes in the luminance of the reflex. Relatively large changes in the luminance of the reflex were recorded. These were due to accommodation. Ss' comprehension of the reading material did not appear to affect the luminance of the reflex in the manner predicted by previous studies. However, a change in task from simple reading material to an addition task appeared to increase the luminance of the reflex. (34 ref)—*Journal abstract*.

11642. Leshner, Alan I. (Bucknell U) **A model of hormones and agonistic behavior.** *Physiology & Behavior*, 1975(Aug), Vol 15(2), 225-235.—Proposes a model of the interaction between endocrine function and agonistic responding that incorporates 3 specific hypotheses about the relationship between hormones and agonistic behavior: (a) The baseline hormonal state of the organism contributes to the determination of whether, in what way, and how intensely the animal will react when it is exposed to appropriate environmental stimuli. (b) One function of the hormonal responses to environmental stimulation and behavioral experiences is to modify the continuing and future behavior of the individual in the same or similar situations. (c) Another function of these hormonal responses is to modify the individual's stimulus qualities so that other individuals' agonistic reactions to it will be modified. Data on hormones and agonistic behavior are reviewed in the context of this model. (118 ref)—*Journal abstract*.

11643. Motelica-Heino, I. & Roffi, J. (U Paris, France) **Norepinephrine in fetal and neonatal rabbit brain.** *Experientia*, 1975, Vol 31(10), 1166-1167.—The norepinephrine (NE) content of the newborn rabbit brain is 37% less than that of the fetus on the last prenatal day, but 2-12 hrs after birth it returns to the prenatal value and remains unchanged. The temporary decrease in NE seems related to stress conditions accompanying parturition. (29 ref)—J. L. Andreassi.

11644. Oster, Phyllis J.; Stern, John A. & Figar, Stepan. (Washington U, St Louis) **Cephalic and digital vasomotor orienting responses: The effect of stimulus**

intensity and rise time. *Psychophysiology*, 1975(Nov), Vol 12(6), 642-648.—Evaluated the effects of rise-decay time and intensity (70 and 90 db) of pure tones on cephalic and finger vascular responses in 60 undergraduate and graduate students. Cephalic dilation responses similar to those reported by E. N. Sokolov (1963) were obtained, as well as cephalic constriction responses were observed at 90 db only and occurred more frequently for slow- than fast-rise tones which were conducive to the production of startle.—*Journal abstract*.

11645. Panksepp, Jaak & Ritter, Michael. (Bowling Green State U) **Mathematical analysis of energy regulatory patterns of normal and diabetic rats.** *Journal of Comparative & Physiological Psychology*, 1975(Nov), Vol 89(9), 1019-1028.—Analysis of feeding patterns indicated that diabetic (alloxan) hyperphagia is characterized by doubling of meal sizes with no change in feeding frequency. 10 normal and 10 diabetic male Long-Evans rats were used. Correlation of meal sizes and intermeal intervals did not provide any systematic relationships for either normal or diabetic Ss. When equations of the general form $Y = A + B\cos(X)$ were fit to successive satiety ratios (postmeal interval-meal size), diabetic Ss showed significantly lower A coefficients, reflecting a lower average level of satiety, as well as significantly lower B coefficients, reflecting less systematic variability in the satiating value of food around the average level. It is concluded that the major regulatory deficit in diabetic animals is a chronic reduction in the long-term signal of body nutrient repletion. (19 ref)—*Journal abstract*.

11646. Paré, William P. (VA Hosp, Perry Point, MD) **Coping behavior, punishment and gastric secretion in the rat.** *Physiology & Behavior*, 1975(Nov), Vol 15(5), 627-629. One group of 4 pairs of male Sprague-Dawley rats could avoid continuous grid shock by depressing a treadle manipulandum. In another group of 4 pairs, the escape response was punished by shock administered via the treadle. Chronic gastric cannulas allowed the collection of gastric secretion. Total acid output was not significantly different between shock-yoke control Ss and their respective experimental mates. Gastric secretion and total acid output were significantly depressed during the shock period as compared to the preshock period, and Ss whose coping response was punished secreted less acid as compared to Ss which were not punished for eliciting the coping response. Gastric secretion, as a response to environmental stress, is discussed.—*Journal abstract*.

11647. Satinoff, Evelyn; Adler, Norman; Kraus, Helene & Flammino, Frank. (U Illinois) **Paradoxical sleep duration during lights-off and lights-on in ground squirrels.** *Physiology & Behavior*, 1975(Nov), Vol 15(5), 631-632. Six golden-mantled ground squirrels and 3 female albino rats were exposed to a 1-hr day consisting of equal alternating periods of light and dark. Under this schedule the rats (nocturnal rodents) tended to cluster their paradoxical sleep during the dark periods. Ground squirrels (diurnal rodents) did not show this effect or the opposite effect of massing their paradoxical sleep in the light. Instead, they distributed their paradoxical sleep

equally between light and dark periods.—*Journal abstract*.

11649. Van der Gugten, J. & Slangen, J. L. (U Utrecht, Rudolf Magnus Inst for Pharmacology, Netherlands) **Norepinephrine uptake by hypothalamic tissue from the rat related to feeding.** *Pharmacology, Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 855-860.—Norepinephrine (NE) uptake by male Wistar rat hypothalamus in vitro was studied in relation to food intake. Significant daily variations in NE uptake were observed in caudal hypothalamus from freely feeding Ss. A maximal elevation occurred at the beginning of the night when food intake is also increasing to a maximum. NE uptake by caudal hypothalamus from relatively hungry Ss previously adjusted to restricted feeding during the daytime was enhanced in afternoon and evening when compared with uptake by tissue from ad lib feeding Ss. Determination of NE uptake by caudal hypothalamus from freely feeding individual Ss and registration of individual meals taken revealed a relation between hypothalamic neuronal activity and the feeding pattern. A positive correlation was observed between NE uptake in vitro and feeding rate during a 2-4 hr interval. It also appeared that NE uptake by caudal hypothalamus was dependent on the time elapsed after the last meal. Data are evaluated in view of physiological studies concerning the onset of feeding and the hypothesis of hypothalamic adrenergic control of food intake. (31 ref)—*Journal abstract*.

11650. Webb, W. B. & Agnew, H. W. (U Florida) **Sleep efficiency for sleep-wake cycles of varied length.** *Psychophysiology*, 1975(Nov), Vol 12(6), 637-641.—Evaluated sleep efficiency in 14 male 18-29 yr old Ss who were maintained on 5 non-24-hr sleep-wake cycles (9, 12, 18, 30, and 36 hrs). The ratio of sleep to wakefulness was held constant in a 1:2 ratio (i.e., there were 2 hrs of wakefulness for each hour of scheduled sleep). The amounts of sleep obtained under each cycle were less than those obtained under the baseline days of 24 hrs. The sleep losses resulted both from an increase in the latency of sleep onset and increased wakefulness after sleep onset. The primary variables which resulted in less efficient sleep were schedule differences in prior wakefulness, circadian effects on the displacement of sleep onset times, a sleep termination effect, and the frequency of occurrence of the allotted sleep periods. In the short regimens the awake time after sleep onset was strongly associated with the degree to which prior wakefulness was reduced. In the longer regimens the principal sources of awake time were extended sleep length and a sleep termination effect.—*Journal abstract*.

Psychophysiology

11651. Alexander, A. Barney. (National Asthma Ctr, Denver CO) **An experimental test of assumptions relating to the use of electromyographic biofeedback as a general relaxation technique.** *Psychophysiology*, 1975(Nov), Vol 12(6), 656-662.—Used 28 19-26 yr old normal Ss in a test of 2 assumptions underlying the use of EMG biofeedback as a general relaxation training

technique: (a) that trained EMG reduction in one muscle generalizes to untrained muscles, and (b) that subjective feelings of relaxation are related to EMG reduction. Experimental Ss received 5 sessions, during the middle 3 of which EMG biofeedback training was offered on the frontalis muscle. In all sessions, EMG recordings were taken from the forearm and lower leg, and ratings of subjective relaxation feelings were obtained at regular intervals. A control group, matched with the experimental group on baseline frontalis EMG, received 5 similar sessions without feedback. Results reveal no evidence of generalization of EMG reduction from the frontalis to the untrained sites, nor any tendency for successful frontalis EMG reduction to result in increased feelings of relaxation beyond what was obtainable from relaxing without the benefit of training. Data suggest that EMG biofeedback cannot be accepted as a viable general relaxation training technique.—*Journal abstract.*

11652. Brown, Barbara B. (Ed.). (VA Hosp, Sepulveda, CA) **The biofeedback syllabus: A handbook for the psychophysiology study of biofeedback.** Springfield, IL: Charles C Thomas, 1975. xviii, 495 p.—Provides a brief synopsis of all known scientific reports on background research leading to the development of biofeedback. References and abstracts are grouped by major topics, and indexing terms called "descriptors" indicate the important elements of any report, facilitating access to references to any aspect of biofeedback.

11653. Brown, Walter A. & Heninger, George. (VA Hosp, Psychiatric Consultation-Liaison Service, Providence, RI) **Cortisol, growth hormone, free fatty acids, and experimentally evoked affective arousal.** *American Journal of Psychiatry*, 1975(Nov), Vol 132(11), 1172-1176.—8 22-29 yr old male volunteers who viewed selected control, suspense, and erotic films experienced significant changes in affect that were limited to fatigue, anxiety, and sexual arousal, respectively. All Ss showed free fatty acid elevations with the suspense and erotic films, and Ss with the most anxiety and sexual arousal showed cortisol elevation with the suspense and erotic films, respectively. Growth hormone elevations occurred independently of cortisol elevations and were not clearly related to film or affect. Thus, activation of the pituitary-adrenocortical and sympathetic nervous systems appears to occur not in relation to a specific dysphoric state but rather with nonspecific affective arousal. (19 ref) *Journal abstract.*

11654. Buchsbaum, Monte; Gillin, J. Christian & Pfefferbaum, Adolf. (NIMH, Adult Psychiatry Branch, Bethesda, MD) **Effect of sleep stage and stimulus intensity on auditory average evoked responses.** *Psychophysiology*, 1975(Nov), Vol 12(6), 707-712.—Studied the nature of auditory average evoked responses (AERs) to clicks ranging from 50 to 80 db in 9 18-22 yr old normal Ss while awake and during sleep. AER amplitude tended to increase only slightly from 50 to 80 db in waking Ss but increased markedly in sleeping Ss during Stages 3 and 4. REM and Stage 1 sleep had small amplitude AERs in comparison with other sleep stages. Ss who showed decreases in amplitude at high intensities while awake slept significantly longer during the experimental nights. (48 ref)—*Journal abstract.*

The discussions cover a range of psychiatric populations, mental disorders, and major methodological problems.

11659. Galbraith, Gary C.; Hohmann, Anna & Creutzfeldt, Otto D. (NPI-Pacific State Hosp Research Group, Pomona, CA) **Correlation between the chromatic visual evoked response and McCollough aftereffect.** *Psychophysiology*, 1975(Nov), Vol 12(6), 667-672.—18 Ss received a 10-min exposure to alternating stripe-color patterns designed to elicit the orientation-specific McCollough red and green complementary aftereffect (CAE). They were also exposed to 7 Hz flickering red and green light to elicit the chromatic visual evoked response (CVER) from occipital and vertex electrodes. Although CVER activity at the fundamental frequency did not correlate significantly with CAE, significant correlations were obtained for CVER activity at higher harmonic frequencies. Results show that 14 and 21 Hz activity of the green CVER correlated positively with green CAE, and 21 and 28 Hz activity of the red CVER correlated positively with red CAE. Findings support the hypothesis that color coding of red involves a "faster" neural system. It appears that achromatic test stimuli elicit complementary aftereffects, the subjective strength of which is not related to the CVER of the training color, but rather the effectiveness of the experienced color to evoke CVER harmonic activity during direct stimulation. 11663. **Klorman, Rafael.** (U Rochester, River Campus Station) **Contingent negative variation and cardiac deceleration in a long preparatory interval: A developmental study.** *Psychophysiology*, 1975(Nov), Vol 12(6), 609-617.—24 male 10-, 14-, and 19-yr-olds participated in a simple reaction time task with 5-sec foreperiod. Contingent negative variation (CNV) waveforms contained an early and a late negative component, and comparable deceleratory limbs characterized the cardiac waveforms. The 19-yr-olds' early cardiac deceleration underwent intercession habituation and the analogous CNV response intrasession diminution; both processes were absent in younger Ss. Only young adults exhibited steady growth of late cardiac and CNV waves across both sessions. There were no developmental differences in basal body movement or anticipatory slowing of somatic activity or cardiac rate. However, 10-yr-olds had faster basal heart rates and larger acceleratory cardiac responses within the foreperiod than either older group. Results demonstrate partial dissociation of somatic and cardiac activity and underscore the need for developmental psychophysiological research in childhood and adolescence. 11665. **Lang, Peter J.; Gatchel, Robert J. & Simons, Robert F.** (U Wisconsin, Madison) **Electro-cortical and cardiac rate correlates of psychophysical judgment.** *Psychophysiology*, 1975(Nov), Vol 12(6), 649-655.—9 undergraduates participated in a frequency discrimination task in which they ranked 5 different pure tones (700, 1,000, 1,100, 1,200, or 1,500 Hz), presented individually, and reported their judgment several seconds after each tone terminated. Tones generally ranked correctly in frequency yielded larger fast-cortical potentials and evoked heart rate responses. Stimuli which occasioned frequent errors prompted a specific, negative, slow cortical wave, which could be distinguished both from eye movement artifact, and the slow wave changes associated with orienting and anticipation. Data are discussed in terms of 2 conceptions of the cognitive processing involved in psychophysical judgments. (22 ref)—*Journal abstract*.
11666. **McCabe, John F.** (U Tennessee) **Classical conditioning of heart rate during exercise in humans.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 7028-7029.
11667. **McDonald, David G. et al.** (U Missouri, Columbia) **Studies of information processing in sleep.** *Psychophysiology*, 1975(Nov), Vol 12(6), 624-629.—Conducted 2 studies of information processing in normal human sleep, using a total of 37 male undergraduates. In Exp I Ss responded differentially in Stage 2 sleep to "own name," "other name," and tone stimuli (decreasing in that order) as reflected in both the finger plethysmograph (FP) and heart rate (HR) and to some extent the EEG K-complex response, and similarly in REM sleep as reflected in the FP measure and to some extent the HR measure, but not in Stages 3-4. In Exp II conditioned discrimination acquired during wakefulness persisted in Stage 4, as reflected in the FP and HR measures, and Stage 2, as reflected in the K-complex response, but not in REM sleep. Results indicate the differential availability of the mechanisms of long- and short-term memory and stimulus preprocessing in the various stages of sleep. (16 ref)—*Journal abstract*.
11668. **McDonald, David G. & Carpenter, F. Allen.** (U Missouri, Columbia) **Habituation of the orienting response in sleep.** *Psychophysiology*, 1975(Nov), Vol 12(6), 618-623.—Used stimulus parameters chosen to maximize the probability of observing habituation of the orienting response (OR) in sleep: weak stimulus, and short interstimulus interval, with tests for both dishabituation and spontaneous recovery. Habituation of finger plethysmograph, heart rate, skin potential, and skin resistance responses was studied in delta sleep and REM sleep in 46 male undergraduate S. There was significant habituation of both finger plethysmograph and heart rate responses in both delta and REM sleep, as well as dishabituation and spontaneous recovery. None of these effects were observed in the electrodermal measures. Results are compared with other studies of habituation of the OR in sleep, but are not interpreted as demonstrating learning during sleep. (23 ref)—*Journal abstract*.
11669. **McFarland, Richard A. & Campbell, Candace.** (California State U, Fullerton) **Precise heart-rate control and heart-rate perception.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 730.—Measured Ss' ability to accurately perceive their own heart rate and to perform a heart-rate control task requiring precise synchronizing of the heartbeat with an external stimulus. Although the relationship between heart-rate control and heart-rate perception was positive, it did not reach statistical significance.

11671. **Price, Alan D.** (Psychological Services, Tustin, CA) **Heart rate variability and respiratory concomitants of visual and nonvisual imagery and cognitive style.** *Journal of Research in Personality*, 1975(Dec), Vol 9(4), 341-355. Studied attention to visual and nonvisual imagery, elicited by an imagery questionnaire, using both within- and between-Ss analyses of cardiac and respiratory parameters. Ss were 24 18-24 yr old males. Visual

imagery was accompanied by more regular interbeat heart rate (HR) and shorter, more stable respiratory cycles than nonvisual imagery. "Visually-oriented" thinkers (visualizers), identified by a word association test, manifested less overall variability in HR than "verbally-oriented" thinkers (verbalizers), as well as less variable HR and respiratory period during visual imagery. Visual and nonvisual imagery differed in HR variability for verbalizers and in respiration period for visualizers. Results are discussed in terms of the concepts of attention deployment, "mental load," cerebral asymmetry, and stylistic personality differences in cognitive functioning. (44 ref)—*Journal abstract*.

11672. Rosler, Frank. (Inst für Psychologie, Neue U. Kiel, W Germany) [The relationship between EEGs and H. J. Eysenck's personality dimensions E and N in different activating situations.] (Germ) *Zeitschrift für Experimentelle und Angewandte Psychologie*, 1975, Vol 22 (2), Vol 22(4), 630-667. —Recorded EEGs of 32 male Ss in different situations: total quiet, while performing computations, while listening, etc. Using factor analysis of personality questionnaire, Ss were divided into extraverts and introverts, "emotionally stable" and "emotionally labile" groups. The EEGs were digitalized and the frequency spectrum for each measuring period was established with fast Fourier analysis. A factor analysis of the frequency spectra revealed 4 independent dimensions. The effects of the situational variances yielded at least 2 dimensions of cortical arousal. The variable "emotional lability" did not influence the main effects. A weak effect for the variable "extraversion" was found in all cases; however, the result was significant for only one spectrum range. An interaction between personality characteristics and situations was found in 2 of the frequency bands. (English & French summaries) (42 ref) —*W. J. Koppitz*.

11673. Silverstein, Leonard & Iverson, Marvin A. (United Cerebral Palsy Treatment & Rehabilitation Ctr., Roosevelt, NY) **Human salivary response to interpersonal bargaining situations: A psycho-physiological investigation.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 771-785. —Parotid salivary secretion was regarded as a correlate of 80 male and female adults' stress arousal: lesser amounts of secretion accompany higher levels of arousal. Experimental results obtained in 2-person interpersonal bargaining situations were then interpreted in terms of this formulation. Bargainers who had unequal advantages (as in a unilateral threat situation) or disproportionately greater potential payoff had relatively little parotid salivary secretion compared to their partners who interacted under disadvantages or had no promise of extra reward. Three variations of the trucking game were employed. Salivary parotid responses were similar for bargainers and failed to discriminate between unilateral threat and bilateral threat. Ss under conditions of no threat and bilateral threat, and seemed to display specific stress characteristics. (21 ref)—*Journal abstract*.

11674. Stelmack, Robert M. & Mandelzys, Nathan. (U Ottawa, Canada) **Extraversion and pupillary response to affective and taboo words.** *Psychophysiology*, 1975(Sep), Vol 12(5), 536-540. —In a study with 33 male undergraduates who completed the Eysenck Personality Inventory,

the association of pupillary constriction with negative valence stimulation was explored within the context of H. J. Eysenck's (1967) theory of extraversion. 3 groups of 11 introverts, 11 ambiverts, and 11 extraverts observed the auditory presentation of 12 affective, 12 taboo, and 24 matched neutral words. Introverts yielded the largest average pupil size under all conditions and the largest magnitude of change in pupil size from prestimulus level. Results support Eysenck's general statement relating extraversion and cortical arousal in its postulate of a higher level of arousal in introverts. The general hypothesis that the pupil constricts to unpleasant stimulation was not affirmed.—*Journal abstract*.

11676. Velden, Manfred & Juris, Michael. (U Mainz, Inst der Johannes Gutenberg-U. W Germany) **Perceptual performance as a function of intra-cycle cardiac activity.** *Psychophysiology*, 1975(Nov), Vol 12(6), 685-692. —Tested the hypothesis of a systematic change in perceptual performance within a single cardiac cycle due to the activity of the baroreceptors in carotid sinus. As an index of perceptual performance the d'-parameter from signal detection theory was used. Ss were instructed to detect a 1,000 Hz sine tone in a background of white noise. Data from the 4 male 27-36 yr old Ss show that when performance was compared during time intervals before and after baroreceptor activity onset, no significant difference was found. Also, when tracing perceptual performance over the whole cardiac cycle in steps of 66, 100, and 200 msec, no systematic variation could be detected. For steps of 33 msec a rhythmic pulsation of perceptual performance of about 8 Hz appeared. An influence of electrical activity of the brain on perceptual performance is postulated. (31 ref) *Journal abstract*.

11677. Venables, Peter H. & Christie, Margaret J. (Eds). (U York, England) **Research in psychophysiology.** New York, NY: John Wiley & Sons, 1975. x, 444 p. —Presents a collection of essays by international contributors which describe current applications of psychophysiological methods to research ranging from experimental psychology to psychiatry, with emphasis on areas of growing relevance to other areas of psychology and medicine.

11678. Vogt, A. T. (U Nevada, Reno) **Electromyograph responses and performance success estimates as a function of internal-external control.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 977-978. —12 internally oriented and 12 externally oriented female undergraduates were chosen from 83 who were administered Rotter's Internal-External Control Scale. For the externals, marginally significant correlations of EMG recordings with self-estimates of success in tensing forearm muscles (–.50) and with success in relaxing these muscles (–.54) were obtained. Analysis of variance of means indicated no differences in ability of these groups to control muscles of the forearm.—*Journal abstract*.

11679. Weerts, Theodore C. (U Wisconsin) **Physiological specificity in cognitive functioning.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5214.

11680. Woodruff, Diana S. (U Southern California, Andrus Gerontology Ctr) **Relationships among EEG alpha frequency, reaction time, and age: A biofeedback study.** *Psychophysiology*, 1975(Nov), Vol 12(6), 673-681. —Used biofeedback to manipulate brain wave frequency in 10 young (mean age, 23.7 yrs) and 10 old (mean age, 72.5 yrs) male Ss. Ss first learned to increase the percent time they spent in their modal brain wave frequency and then to increase the percent time they spent in brain wave frequencies 2 Hz faster and 2 Hz slower than their modal frequency. Simple auditory reaction time (RT) was measured during biofeedback immediately after Ss reached a set criterion at each biofeedback task. To control for the effect of biofeedback training on RT, control groups of 5 old and 5 young Ss heard a prerecorded feedback signal which was not contingent upon their brain wave activity. Experimental Ss increased the abundance of alpha activity above baseline levels while control Ss did not. When the Ss produced fast brain waves their RT was significantly faster than when they produced slow brain waves. Correlations between brain wave period and RT were small. Data did not completely support the notion that the alpha rhythm serves as a master timing mechanism for behavior, but the relationship between controlled EEG activity and RT was clearly demonstrated. (40 ref)—*Journal abstract*.

PHYSIOLOGICAL INTERVENTION

11681. Carlisle, H. J. & Laudenslager, M. L. (U California, Santa Barbara) **Inhibition of airlicking in thirsty rats by cooling the preoptic area.** *Nature*, 1975(May), Vol 255(5503), 72-73. —Placed unilateral water-perfused thermodes stereotactically into the preoptic area (POA) of 6 naive and 2 experienced female Sprague-Dawley airlicking rats and into the posterior hypothalamus (PH) of 1 naive and 1 experienced airlicker. Seven other controls were unoperated or sham-operated. Results demonstrate that airlicking, like water drinking, was affected by cooling the POA. Cooling to 33°C completely blocked acquisition of airlicking by naive Ss and reduced it by 50% in experienced Ss. Cooling of the PH had no substantial effect.—*I. Davis*.

11682. Contreras, Robert J. & Hatton, Glenn I. (Michigan State U) **Gustatory adaptation as an explanation for dietary-induced sodium appetite.** *Physiology & Behavior*, 1975(Nov), Vol 15(5), 569-576. —Hypothesized that a Na-deprived rat takes longer to adapt to a salt stimulus than does a normal rat. The temporal characteristics of drinking 0.4 M NaCl and distilled water were investigated in 24 male Holtzman albino rats in each of 2 experiments. Analysis showed that Na-deprived Ss took less time between drinking episodes (interdrink intervals) and drank consecutively for longer periods of time (drinking time) than did normal controls. Results are attributed primarily to taste factors because postingestional and thirst influences were at a minimum. Research was also directed at determining, in 12 other Ss, the urinary and blood chemical changes associated with

dietary sodium deprivation. The levels of sodium in plasma were unchanged because of reduced sodium excretion, but the levels of potassium were significantly increased after 20 days of deprivation. Thus, sodium appetite might be important to combat against hyperkalemia (high plasma potassium), although the appetite develops long before an increase in potassium is detected. (23 ref)—*Journal abstract*.

11683. Cowen, Murray A. (State U New York, Upstate Medical Ctr, Syracuse) **CO₂: A possible missing link between regional cortical metabolism and transcephalic direct current potentials.** *Psychophysiology*, 1975(Nov), Vol 12(6), 693-701. —Certain slowly changing potentials measured on the surface of the scalp (TCDC potentials) have been shown to correlate significantly with a number of psychological and psychiatric parameters and are related to metabolism of the subjacent cerebral cortex. The present work investigated the possibility that the potentials are related to brain CO₂ production in 3 groups of studies with albino rats. In the 1st study, rat brain CO₂ metabolism was modulated by a variety of internal carotid injections and the concomitant TCDC effects observed. In a 2nd study, scalp CO₂ was modulated by a series of external carotid injections and the associated TCDC effects noted. Biophysical analysis showed that electrogenic CO₂ reactions in the scalp were quantitatively in agreement with empirically measured TCDC voltage, current, and resistance measures and that the cortex was the most likely source for most of the CO₂ involved in the voltage generation. 11684. Craddock, Samuel N. & Riopelle, Arthur J. (Louisiana State U) **Discrimination by rhesus monkeys of diets containing supplemental amino acids.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 683-689. —Gave 9 macaques an opportunity to demonstrate a preference for water with or without the addition of the amino acid isoleucine, methionine, phenylalanine, or tryptophan at a concentration proportional to that in whole egg protein. Ss were then subjected on 4 occasions to a 7-day experimental week when they received an isocaloric diet containing only one-fourth the amount of protein of their normal diet. An identical low-protein diet supplemented with one of the above amino acids, again at a concentration proportional to that in egg, was presented for an equivalent period during the experimental week, and the amounts consumed of each diet were compared. Ss failed to exhibit a preference or an aversion for water supplemented with any of the amino acids; however, all low-protein diets supplemented with an amino acid were consumed in greater quantities than a low-protein diet lacking a supplement. On Days 6 and 7 of the experimental weeks when protein depletion was most severe, Ss significantly ($p < .05$) preferred the diet supplemented with isoleucine to a diet lacking the supplement. 11685. Crawford, Walter C. & Glick, Bruce. (Mississippi State U, Agricultural & Forestry Experiment Station) **The function of the preoptic, mammillaris lateralis & ruber nuclei in normal and sexually inactive male chickens.** *Physiology & Behavior*, 1975(Aug), Vol 15(2), 171-175. —Gave lesions to male chickens in the mammillaris lateralis (ML) and Ruber (Ru) nuclei at 5

wks of age. Cannulas filled with testosterone propionate (TP) were positioned in the praeopticus paraventricularis magnocellularis (PPM) area of the hypothalamus. The mating behavior of lesioned birds was tested at maturity while mating behavior of cannulated birds was evaluated at 8 wks of age. Males hatched from eggs dipped in 2 g% TP (TP birds) exhibited a marked decrease in their sexual behavior responses, and lesioning did not alter this effect. TP birds with cannulas in the PPM nuclei were stimulated to attempt to mate. Data indicate that TP birds failed to mate because of an interference in the development of the PPM nuclei. Bilateral lesions in the ML nuclei did not significantly influence sexual behavior, while lesions in the Ru nuclei increased the sexual response. (18 ref)—*Journal abstract*.

11688. Goodall, Edwin B. & Carey, Robert J. (Syracuse U) **Effects of d - versus l -amphetamine, food deprivation, and current intensity on self-stimulation of the lateral hypothalamus, substantia nigra, & medial frontal cortex of the rat.** *Journal of Comparative & Physiological Psychology*, 1975(Nov), Vol 89(9), 1029-1045.—Studied intracranial self-stimulation (ICSS) in 18 adult Sprague-Dawley rats with chronically implanted lateral hypothalamic, substantia nigra, or medial frontal cortex bipolar electrodes. A comparison of the effects of dextro- and levoamphetamine on ICSS response rate indicated that the dextro isomer had a greater facilitatory effect than the levo isomer at lateral hypothalamic and substantia nigra electrode sites but that neither isomer significantly affected medial frontal cortex ICSS. Dextroamphetamine resulted in a dose-related increase in motor activity, but the same doses of the levo isomer resulted in decreased motor activity. Only lateral hypothalamic ICSS response rates increased significantly in response to food deprivation. Increases in current intensity above the level used for amphetamine and food-deprivation testing facilitated lateral hypothalamic and substantia nigra ICSS response rates. The responsiveness of ICSS at each electrode site appeared to be correlated with the fiber- and cell-body densities of

catecholaminergic systems in the brain. (42 ref)—*Journal abstract*.

11690. Hoebel, Bartley G. (Princeton U) **Brain reward and aversion systems in the control of feeding and sexual behavior.** *Nebraska Symposium on Motivation*, 1974, No 22, 49-112.—Presents a general theory that self-stimulation and stimulation-escape indicate brain mechanisms that facilitate approach when necessary or withdrawal when physiologically sated. Hyperphagia in rats is analyzed following damage to, stimulation of, or self-stimulation of the hypothalamus. The theory of reward and aversion in feeding was applied to mating and found good in predicting behavior. It is theorized that all basic behavior patterns are controlled by brain mechanisms dependent on relevant physiological signals. (194 ref)—*J. M. Roberts*.

11691. Hoebel, Bartley G.; Hernandez, Luis & Thompson, Roger D. (Princeton U) **Phenylpropanolamine inhibits feeding, but not drinking, induced by hypothalamic stimulation.** *Journal of Comparative & Physiological Psychology*, 1975(Nov), Vol 89(9), 1046-1052.—Conducted 3 experiments using a total of 11 female Sherman rats. In Ss bearing lateral hypothalamic electrodes that elicited both feeding and drinking, ip injection of the appetite suppressant drug phenylpropanolamine (Propadrine) inhibited only feeding. This occurred whether feeding and drinking were tested simultaneously or separately. Selective inhibition of lateral hypothalamic feeding also followed injection of this drug through lateral, but not medial, hypothalamic electrode cannulas. It is concluded that hypothalamically induced feeding is under some of the same pharmacological controls as spontaneous feeding, that this control may be exerted, in part, in or near the lateral hypothalamus, and that the neural systems which induce feeding and drinking during hypothalamic stimulation can be pharmacologically separated. (26 ref)—*Journal abstract*.

11692. Houser, Vincent P.; Cash, Randall J. & Van Hart, Dale A. (VA Hosp, Psychotropic Drug Lab, Perry Point, MD) **Effects of manipulating cholinergic tone upon the activity-stress ulcer.** *Pharmacology Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 825-831.—80 male Sprague-Dawley rats were housed in standard activity wheel cages and fed for only 1 hr per day. Ss were divided into drug groups that received either 0.25, 0.50, or 1.0 mg/kg of scopolamine methylbromide, or 0.06, 0.125, or 0.250 mg/kg of carbachol, 3 times/day. Two separate saline control groups accompanied each drug series. All Ss died within 6 days, and most demonstrated significant gastric lesions in the glandular fundus of the stomach. All dosages of scopolamine significantly reduced the number and severity of gastric lesions and in some cases abolished all signs of stomach pathology. None of the dosages of carbachol significantly affected either the number or degree of gastric ulceration noted in the body of the stomach. Results are interpreted to suggest that the secretion of gastric acid may be an important contributing factor in the forma-

tion of gastric ulcers in animals subjected to activity-stress procedure.—*Journal abstract.*

11693. Kanungo, M. S.; Patnaik, S. K. & Koul, Omanand. (Banaras Hindu U, Biochemistry Lab, India) **Decrease in 17β estradiol receptor in brain of ageing rats.** *Nature*, 1975(Jan), Vol 253(5490), 366-367.—Bilaterally ovariectomized Wistar rats 7, 44, and 108 wks old, and 22 days later (to ensure complete disappearance of estradiol from the blood), measured the level of estradiol-protein complex in the cytosol of brain hemispheres. Results indicate that induction of acetylcholinesterase in the brain of old rats may be due to a decrease in the level of the 17β estradiol receptor. Consideration of this finding with those of other studies points to a more general conclusion: that the impaired induction of certain enzymes by steroid hormones in old age may be caused by the depletion of certain receptors in the cytosol of target cells. Possible mechanisms involved in these processes are discussed.—*I. Davis.*

11694. Laurent, Jean-Paul & Guerrero, Fructuoso A. (U Claude-Bernard, Lyon, France) **Reversible suppression of ponto-geniculo-occipital waves by localized cooling during paradoxical sleep in cats.** *Experimental Neurology*, 1975(Nov), Vol 49(2), 356-369.—Used a new technique of localized moderate cooling to perform reversible lesions in 5 adult cats. Results show that (a) reversible suppression of ponto-geniculo-occipital activity, at the level of the lateral geniculate nuclei, by bilateral cooling at the level of the ponto-mesencephalic isthmus is effective under prescribed conditions of position and tip temperature of the thermodes; (b) unilateral isthmus colin suppresses only 1 of the 2 components of ponto-geniculo-occipital waves; and (c) ponto-geniculo-occipital waves of paradoxical sleep and eye movement potentials are suppressed in parallel by cooling. It is suggested that a set of fibers, whose topography is not entirely identical with the intermediate bundle stemming from the nucleus subcoeruleus, might be involved in the conduction of information for ponto-geniculo-occipital waves and eye movement potentials. (26 ref)—*Journal abstract.*

11695. Lumia, Augustus R.; Westervelt, Miriam O. & Rieder, Corinne A. (Skidmore Coll) **Effects of olfactory bulb ablation and androgen on marking and agonistic behavior in male Mongolian gerbils (*Meriones ungulatus*).** *Journal of Comparative & Physiological Psychology*, 1975(Nov), Vol 89(6), 1091-1099. Paired 108 male Mongolian gerbils, selected for high marking frequency, with male opponents and recorded marking and fighting behavior. Ss then underwent castration, bilateral bulbectomy, unilateral bulbectomy, the combined operations, or a sham operation; and their behavior was again observed. All operated Ss showed drastic reduction in both marking and aggressive encounters. Injections of testosterone propionate (TP) produced complete restoration of marking in castrates but not in bilaterally or unilaterally bulbectomized Ss or combined operates. The exhibition of aggression after injections of TP, however, was enhanced to supernormal levels in bulbectomized or bulbectomized-castrated Ss. Results suggest the following: that removal of the olfactory bulbs may eliminate a critical neural input necessary for the normal expression of marking and agonistic behavior; that although

marking and fighting are influenced by olfactory input and gonadal steroids, their regulatory mechanisms may not be identical; and that removal of the bulbs may sensitize a neural mechanism controlling aggression, thus potentiating its elicitation following administration of exogenous androgen. (23 ref)—*Journal abstract.*

11696. Nachman, Marvin & Hartley, Philip L. (U California, Riverside) **Role of illness in producing learned taste aversions in rats: A comparison of several rodenticides.** *Journal of Comparative & Physiological Psychology*, 1975(Nov), Vol 89(9), 1010-1018.—Compared several toxic agents to test the effect of various types of illness in producing learned taste aversions. Ss in 2 experiments were 90 female and 26 male Sprague-Dawley rats. After a 10-min sucrose drinking trial, groups of Ss were injected ip with lithium chloride or with a strong, near lethal dose of a rodenticide. Strong sucrose aversions were acquired by groups injected with lithium chloride, copper sulfate, sodium fluoroacetate, or red squill, and very weak or no aversions were learned by groups injected with thallium, warfarin, cyanide or strychnine. Results are discussed in terms of onset of symptoms, duration of symptoms, and kinds of physiological effects necessary to produce aversions. It is concluded that the effects of different drugs may be mediated by different physiological systems in producing learned taste aversions. (33 ref)—*Journal abstract.*

11697. Nelsen, Judith M.; Pelley, Kathleen & Goldstein, Leonide. (New Jersey Coll of Medicine & Dentistry, Inst of Mental Health Sciences, Piscataway) **Protection by nicotine from behavioral disruption caused by reticular formation stimulation in the rat.** *Pharmacology Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 749-754.—Male Sprague-Dawley rats were chronically implanted in the mesencephalic reticular formation and trained to perform on a visual attention task. Short trains of electric current delivered to the reticular formation effectively blocked performance in a reversible and reproducible fashion. Subcutaneous administration of 100 μ g/kg nicotine (as the base) served to attenuate the behavioral disruption caused by reticular stimulation. The suggestion is discussed that it is a nicotine-induced limbic system activation which antagonizes the behavioral disruption caused by electrically induced reticular over-activation. (17 ref)—*Journal abstract.*

11698. O'Brien, James H. & Rosenblum, Stuart M. (U Oregon Medical School) **Somatic and visual afferents through centromedian to the postcruciate cortex.** *Physiology & Behavior*, 1975(Nov), Vol 15(5), 603-609.—Evaluated the similarity of projection from the centromedian area of the thalamus to the postcruciate association cortex for visual and somatic afferents. A reversible cooling blockade of the thalamic area in 23 cats was used to determine the contribution of synaptic activity in this area to unit and evoked potential (EP) responses recorded in the cortex. Prior to cooling, EPs to light flash, ipsi paw, and contra paw stimulation had about the same waveshape. Thalamic cooling reduced the similarity of EPs to ipsi and contra paw stimulation, but did not change the similarity of visual-somatic EPs. A single neuron's response was different for each of the 3 stimuli, and thalamic cooling produced different changes

in these responses. It is concluded that the projection of the intralaminar thalamus to the posterocaudate cortex is highly differentiated and that it would be inaccurate to describe the intralaminar thalamocortical system as projecting equally and in an undifferentiated fashion to the posterocaudate cortex. 11700. Parrott, R. F. & Barfield, R. J. (Royal Veterinary Coll, London, England) **Post-ejaculatory vocalization in castrated rats treated with various steroids.** *Physiology & Behavior*, 1975(Aug), Vol 15(2), 159-163.—Observed the sexual behavior of 29 male Wistar rats before and in the 3 wks after castration. Ultrasonic vocalization during the refractory period (RP) following ejaculation was recorded. All Ss received daily injections (100 µg test steroid + 100 µg dihydrotestosterone propionate, DHTP) from the day of castration. Treatment groups were: testosterone propionate (TP) + DHTP; 19-hydroxytestosterone propionate (19HTP) + DHTP; estradiol dipropionate (OP) + DHTP; DHTP (200 µg/day); or vehicle only. Ejaculation and normal RPs were maintained with TP, 19HTP, and OP treatments. In Ss treated with DHTP alone or vehicle only ejaculatory ability declined and RPs increased in length. Ultrasonic vocalization was normal in all Ss except those treated with OP, where it was either reduced or absent. In Week 4 treatments in TP + DHTP and OP + DHTP groups were reversed. During Weeks 5-7 vocalization was gradually restored in Ss that previously received OP and partially inhibited in Ss previously treated with TP. Results indicate that vocalization may not be dependent on the presence of testicular androgens and that OP has a gradual inhibitory, although reversible, effect on vocalization when given at high doses.—*Journal abstract.*

11701. Routtenberg, Aryeh. (Northwestern U) **Intracranial self-stimulation pathways as substrate for memory consolidation.** *Nebraska Symposium on Motivation*, 1974, No 22, 161-182.—Reviews the author's work on the anatomy of self-stimulation and its use in understanding general problems raised by others: effects of norepinephrine, interpreting localization, brainstem mapping, and the function of the fibers supporting intracranial self-stimulation. 11703. Thomas, John R. & Burch, Linda S. (Naval Medical Research Inst, Bethesda, MD) **Helium pressure effects on avoidance behavior in rats breathing high nitrogen pressures.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 797-798.—3 male albino rats were given avoidance training and were exposed to pressures of 7, 13, and 19 ATA breathing nitrogen and then to 25, 31, and 37 ATA breathing helium. Ss showed increased avoidance response rates above established baselines to 19 ATA, followed by a decline. Narcotic effects of

nitrogen were not reduced differentially by addition of helium.—*Journal abstract.*

11704. Torda, C. (Mt Sinai School of Medicine, City U New York) **Effect of recurrent stress on postnatal increase of tyrosine hydroxylase.** *Pharmacology Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 735-738.—Tyrosine hydroxylase is present at birth and reaches adult levels in the hypothalamus usually during the 2nd mo. In the present study, the effects of starvation and electrical stimulation of hypothalamic nuclei on the speed of maturation of noradrenergic structures were studied in kittens and male albino rats from birth until adulthood. Ss were divided into 4 groups: controls, stressed, electrode-implanted stressed, and sham-operated controls, and observations were made of tissue levels of tyrosine hydroxylase. Results show that recurrent stimulation of intrahypothalamic structures shortened the 2-mo period of maturation in a statistically significant manner. (34 ref)—*B. McLean.*

11705. Turner, John W. (Medical Coll of Ohio, Toledo) **Influence of neonatal androgen on the display of territorial marking behavior in the gerbil.** *Physiology & Behavior*, 1975(Sep), Vol 15(3), 265-270.—Studied the effect of the presence or absence of androgen during the neonatal period on territorial marking behavior in 24 male and 24 female Mongolian gerbils. Scent marking frequency was 20-40 fold greater in males than in females. Gonadectomy depressed marking in males but not in females. Testosterone propionate (TP) therapy completely restored marking in males but increased marking in intact and ovariectomized females to only 1/4 that in males. Genetic males castrated within 2 days postpartum did not mark more frequently than TP-treated females after TP treatment in adulthood. Genetic females given a single TP injection within 6 days postpartum marked at male levels after TP treatment in adulthood. Males castrated after Day 2 and females given TP after Day 6 displayed marking frequencies intermediate between normal male and female levels after TP treatment in adulthood. Results suggest that sexual dimorphism in territorial marking behavior is due to a sex difference in the competency to respond to androgen and that development of this competency occurs during the neonatal period. (24 ref)—*Journal abstract.*

11706. Valenstein, Elliot S. (U Michigan) **Brain stimulation and behavior control.** *Nebraska Symposium on Motivation*, 1974, No 22, 251-292.—Reviews major trends in brain stimulation research from 1950 to the present: accumulation of evidence showing that discrete brain areas evoke natural motivational states and that brain stimulation can control behavior. Data are

presented on rat preferences (water-glucose, dog food-rat pellets, carrying-not carrying objects, etc). It is contended, however, that the effects of stimulation depend on other events occurring in the brain and environment, and that intensity rather than location of the electrode determines the behavior. Plans for controlling human behavior by controlling the brain are delusions held by those who believe that violence is due to brain disease rather than to a diseased society. (74 ref)—*J. M. Roberts.*

Electrical Stimulation

11707. Coleman, James R. & Lindsley, Donald B. (U California, Los Angeles) **Hippocampal electrical correlates of free behavior and behavior induced by stimulation of two hypothalamic-hippocampal systems in the cat.** *Experimental Neurology*, 1975(Nov), Vol 49(2), 506-528. —Recorded bilateral dorsal and ventral hippocampal and anterior and posterior neocortical electrical activity in 11 cats during free behavior situations and during stimulation of medial and lateral hypothalamic systems. Alertness, attentiveness, scanning, or investigatory behaviors were accompanied by hippocampal theta rhythms and by desynchronization of neocortical electrical activity. Behavioral states of relaxed wakefulness, inattentiveness, or drowsiness were accompanied by high voltage irregular patterns of electrical activity in the hippocampus with no organized theta rhythms. Specific behaviors (alerting, orienting, scanning, or investigatory) emerging from relaxed behavioral states occurred concomitantly with hippocampal theta rhythm. Electrical stimulation (100 Hz) of the medial hypothalamic system elicited hippocampal theta rhythm and alerting, orienting, scanning, and investigatory behaviors. In contrast, lateral hypothalamic stimulation at 100 Hz caused low voltage desynchronization of hippocampal electrical activity accompanied by postural stability and fixation of gaze. (24 ref) —*Journal abstract.*
11708. Delgado, J. M.; Delgado-García, J. M.; Amérigo, J. A. & Grau, C. (Autonomous U, Medical School, Madrid, Spain) **Behavioral inhibition induced by pallidal stimulation in monkeys.** *Experimental Neurology*, 1975(Nov), Vol 49(2), 580-591. Results of a study with 9 rhesus monkeys indicate that (a) under restraint, pallidal stimulation induced contralateral head turning, and/or flexion of the contralateral arm without evoking detectable changes in electrical activity of the brain, emotionality, or reactivity to food or threats. (b) A single 5-sec radio stimulation of the pallidum produced discrete motor responses which did not disturb spontaneous behavior or taking of pellets, but inhibitory effects appeared when repeated feedback or programmed stimulations were used. (c) Stimulation of the pallidum in the dominant partner of a caged pair changed the social status of both Ss, inhibiting signs of dominance in the stimulated monkey and correspondingly increasing the social rank of the nonstimulated animal. (d) Effects of stimulation of the pallidum in the same animal depended on its hierarchical status. It is suggested that the pallidum has an integrative role in the relation between the animal's motivational state and its environment (26 ref) —*Journal abstract.*
11709. Elbergen, Robert D. & Caggiano, Anthony R. (U Pittsburgh, Psychobiology Program) **Acceleration and pacing of copulatory performance of male rats by repeated, aversive brain stimulation.** *Physiology & Behavior*, 1975(Sep), Vol 15(3), 253-257. Repetitive electric shocks applied to the dorsal midbrain (DM) paced the copulatory behavior of 6 sexually experienced male Sherman rats. DM stimulation also accelerated the rate of copulation, the achievement of ejaculation, and the resumption of copulation after ejaculation, and increased the number of ejaculations in a 1-hr test (15 ref) —*Journal abstract.*
11710. Hirasuna, Noriaki. (State U New York, Stony Brook) **Disruption of the conditioned emotional response in rats by two forms of caudate nuclear stimulation.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5222.
11711. Kesner, Raymond P.; Dixon, David A.; Pickett, Diane & Berman, Robert F. (U Utah) **Experimental animal model of transient global amnesia: Role of the hippocampus.** *Neuropsychologia*, 1975(Oct), Vol 13(4), 465-480. —In 3 experiments, different groups of a total of 136 Long-Evans rats were given a hippocampal seizure afterdischarge 1 or 7 days after acquiring a passive avoidance, active avoidance, or barpressing habit. At various delays after the cessation of the seizure afterdischarge, Ss were tested for retention of the previously acquired habit. Results indicate that 1 day, but not 7 days, after learning hippocampal seizures were capable of producing a temporary retrograde amnesia for well-learned responses and an anterograde amnesia for experiences that occurred during the retrograde amnesia period. Data suggest that hippocampal seizures can serve as an experimental prototype of "transient global amnesia" and that the hippocampus is critically involved in retrieval of information from long-term memory. (French & German summaries) (35 ref) —*Journal abstract.*
11712. Krippner, Stanley & Brown, Daniel P. (Maimonides Medical Ctr, Brooklyn, NY) **Field independence/dependence and Electroson 50-induced altered states of consciousness.** *Journal of Clinical Psychology*, 1973(Jul), Vol 29(3), 316-319. —Assigned 30 undergraduate volunteers to experimental and control groups. Each of these groups was divided into field-dependent and field-independent Ss on the basis of rod-and-frame test scores. Each S gave a state report that denoted an altered state of consciousness (i.e., electrosleep) before and after an experience with the Electroson 50, a device used for treating insomnia that has a peak output of 50 V. For the experimental group, the machine passed a mild current through electrodes attached to S's head. For the control group, the machine was turned off. The state reports, which assessed the degree of concentration that S places on internal vs external events, given before and after Electroson 50 were significantly different for both the experimental and control groups. Field independent Ss in the control group gave significantly higher post-Electroson 50 state reports than did field dependent Ss in that group. —*Journal summary.*
11713. Livesey, P. J. & Bayliss, J. (U Western Australia, Nedlands) **The effects of electrical (blocking) stimulation to the dentate of the rat on learning of a simultaneous brightness discrimination and reversal.** *Neuropsychologia*, 1975(Oct), Vol 13(4), 395-407. —Trained 18 male albino rats with bipolar electrodes chronically implanted in the dentate gyrus of the dorsal hippocampus on a simultaneous visual discrimination task and reversal. Ss trained with electrical stimulation (5 sec train of pulses every 3 sec throughout the training session) did not differ from 6 nonstimulated Ss in acquisition. In reversal, however, stimulated Ss failed to learn the task. Findings contrast with those from earlier studies in which similar stimulation to the overlying CA1 area of the dorsal hippocampus during the learning of

this task disrupted acquisition. Results support the view that there is functional differentiation within the hippocampus that is related to the anatomical organization of this structure. (French & German summaries) (34 ref)—*Journal abstract*.

11714. Livesey, P. J. & Meyer, P. (U Western Australia, Nedlands) **Functional differentiation in the dorsal hippocampus with local electrical stimulation during learning by rats.** *Neuropsychologia*, 1975(Oct), Vol 13(4), 431-438.—18 male albino rats were given stimulation through bipolar electrodes to the CA1 region of the dorsal hippocampus during the learning of a brightness discrimination. Ss stimulated only during cue presentation showed a pattern of disruption comparable to that of Ss in an earlier experiment receiving stimulation throughout the whole learning period. Stimulation 10 sec after each response produced a similar effect to such stimulation given 5 sec after in the earlier experiment with disruption slightly less than with the 5-sec delay. Stimulation to the overlying cortex produced no significant effects in 9 other Ss. Results support the view that the CA1 region mediates 2 distinct processes in this discrimination, namely a short-term memory process in consolidation and a retrieval or comparison process. Both appear likely to be related through an attentional mechanism. (French & German summaries)—*Journal abstract*.

11715. Lucas, E. A. (U Arkansas, Medical Ctr, Little Rock) **Effect of five to seven days of sleep deprivation produced by electrical stimulation of the midbrain reticular formation.** *Experimental Neurology*, 1975(Nov), Vol 49(2), 554-568.—Produced sleep deprivation in 7 cats by electrical stimulation of the midbrain reticular formation. 4 Ss received continuous stimulation, and 5 were stimulated intermittently. Electrographic data were collected continuously during 5-7 days of stimulation and for 48 hrs thereafter. Behavioral and electrographic correlates of sleep were abolished by both methods of stimulation for 3 days. Although stimulation continued, behavioral signs of sleep appeared along with electrographic evidence of brief epochs of slow-wave sleep. Maintenance of wakefulness beyond 3 days became increasingly difficult and required frequent changes in the stimulus values. After the cessation of stimulation, there was a significant increase in total sleep in both groups for 48 hrs. The termination of continuous stimulation resulted in an initial rebound in slow-wave sleep and a later rebound in REM sleep. The cessation of intermittent stimulation resulted in a large REM sleep rebound followed by a modest rebound in slow-wave sleep. (19 ref)—*Journal abstract*.

11716. Pinel, John P. & Mucha, R. F. (U British Columbia, Vancouver, Canada) **Suppression of voluntary ethanol consumption in rats by electroconvulsive shock.** *Physiology & Behavior*, 1975(Nov), Vol 15(5), 585-591.—When ethanol solutions were presented on alternate days in Exp I to 21 male hooded rats with a continuous access to food and water, there was a progressive increase in alcohol selection. However, this increase could be blocked or eliminated by a series of daily ECSs. Two additional experiments suggested that this effect was not the result of a taste aversion conditioned to the noxious aftereffects of the ECS. In

Exp II (26 Ss), the increase in alcohol selection produced by the periodic regimen was blocked by a series of ECSs which was completed 24 hrs before the 1st presentation of ethanol. In Exp III (16 Ss), a standard conditioned taste-aversion paradigm was employed with ECS in lieu of the usual emetic; there was no evidence of a conditioned taste aversion even after multiple trials. In Exp IV (38 Ss), increases in the consumption of a sodium-saccharin solution presented on an alternate-day schedule were blocked by a series of ECSs. Thus, it appears that neither the effect of periodic availability on consumption nor its disruption by ECS are specific to ethanol solutions.—*Journal abstract*.

11717. Schneider, Holger. (U Saarlandes, Nervenklinik, Homburg/Saar, W Germany) **[Micromotor recording of writing pressure during intracerebral stimulation at stereotactic operations.]** (Germ) *Archiv für Psychiatrie und Nervenkrankheiten*, 1975, Vol 220(4), 381-391.—Eight cases of spastic torticollis were examined during the course of stereotactic operations, using F. Steinwachs's writing pressure apparatus while the ventrolateral thalamus was stimulated. When 50 stimuli/sec were given, the significant changes of motor function in writing were slowing of writing speed, an increase in writing pressure, and greater changes of pressure amplitude with tendencies to parallel course. With 25 stimuli/sec, similar results appeared, but smaller amplitude changes and lowering of writing pressure also occurred. When 8 stimuli/sec were given, no changes of pressure patterns were found. Three typical cases are described. It is concluded that the recording of fine pressure changes in writing may indicate alterations of cerebral motor regulations. (40 ref)—*English abstract*.

11718. Singer, W.; Tretter, F. & Cynader, M. (Max-Planck-Inst für Psychiatrie, München, W Germany) **Organization of cat striate cortex: A correlation of receptive-field properties with afferent and efferent connections.** *Journal of Neurophysiology*, 1975(Sep), Vol 38(5), 1080-1098.—Studied the receptive-field characteristics of Area 17 cells in relation to their afferent and efferent connections, and compared quantitative data from Area 17 neurons with Area 18 cells. Intra- and extracellular recordings were obtained in paralyzed anesthetized cats. The connectivities of the recorded cells were determined from responses to electrical stimulation of afferent and efferent pathways. The receptive fields were grouped in 4 classes according to the spatial arrangements of on- and off-areas: Class I, fields with exclusive on- or off-areas; Class II, fields with spatially separate on- and off-areas; Class III, fields with mixed on- and off-areas; and Class IV, fields which could not be mapped with stationary stimuli. Results from electrical stimulation suggest 2 major classes of cells: cells in the 1st group are driven mainly or exclusively by lateral geniculate nucleus (LGN) afferents. They rarely receive additional excitation from intrinsic or callosal afferents and rarely possess corticofugal axons. Cells in the 2nd group receive either converging inputs from LGN afferents and further intrinsic afferents or only from intrinsic afferents. Cells in both groups can be driven by either X- or Y-type afferents. (25 ref) *Journal summary*.

11719. Soumireu-Mourat, Bernard; Destrade, Claude & Cardo, Bernard. (U Bordeaux I, Inst de Biologie

Animale, Talence, France) **Effects of seizure and subseizure posttrial hippocampal stimulation on appetitive operant behavior in mice.** *Behavioral Biology*, 1975(Nov), Vol 15(3), 303-316.—93 BALB/c male mice were implanted bilaterally in the dorsal hippocampus and the individual afterdischarge threshold intensity was determined for a 4-sec bilateral hippocampal stimulation train. Several days later, all Ss underwent an initial 15-min session in a continuous reinforcement appetitive task. In Exp I, all Ss except a control group were stimulated 30 sec after the learning session either at half of the individual afterdischarge threshold value for 80 sec, or at the threshold value for 4 or 80 sec. A 2nd 30-min session took place 24 hrs later. The reminiscence effect was found in control Ss. In the subseizure stimulated group, the observed reminiscence effect was higher than that of the control group. Conversely, with the 2 durations of seizure stimulation, the reminiscence effect was erased. In Exp II, the same learning paradigm was used, but Ss were stimulated at their individual afterdischarge threshold value 30 sec-180 min after the end of the 1st session. During the 2nd session, 24 hrs later, the impairment of the reminiscence effect decreased as the learning-stimulation delay was increased. (2 p ref)—*Journal abstract*.

11720. Waranch, H. Richard & Terman, Michael. (Northeastern U) **Control of the rat's sniffing behavior by response-independent and dependent schedules of reinforcing brain stimulation.** *Physiology & Behavior*, 1975(Sep), Vol 15(3), 365-372.—Notes that the rat's sniffing response occurs in continuous bursts, at approximately 5-11 Hz. In the present experiment with 4 male LEW/BN rats, the analog signal from a thermo-couple probe in the nasal cavity was digitized to provide a discrete logic pulse, defining a sniff, and permitting on-line presentations of reinforcing brain stimulation contingent on momentary sniffing patterns. Schedules of presentation included response-independent fixed interval (temporal conditioning), continuous reinforcement (CRF), and differential reinforcement of low rates (DRL 10 sec). Under temporal conditioning, bursts of sniffing were observed immediately after stimulation, and an acceleration in sniffing developed preceding stimulation. Under CRF, operant rate-intensity functions were similar to traditional barpress data. Under DRL, sniffs were effectively paced by the criterion interval, and interresponse time analyses revealed evidence of temporal discrimination. Results are interpreted in terms of the interplay of operant and respondent functions. (37 ref)—*Journal abstract*.

11721. Yeomans, John S. (U California, Riverside) **Quantitative measurement of neural post-stimulation excitability with behavioral methods.** *Physiology & Behavior*, 1975(Nov), Vol 15(5), 593-602.—Shows that previous paired-pulse techniques for estimating neural refractory periods of neurons mediating behaviors elicited by electrical stimulation of the brain are inadequate for characterizing the distribution of refractory periods. A new method is proposed which makes possible quantitative analysis of neural excitability cycle changes. In an experiment which compared the 2 techniques in 8 male Sprague-Dawley rats, excitability increases for fibers mediating barpressing for rewarding

brain stimulation were found at all conditioning-testing intervals from 0.4 to 1.2 msec. Results are discussed in terms of local potential summation and relative and absolute refractory periods. (34 ref)—*Journal abstract*.

Lesions

11722. Aaron, Michael & Thorne, B. Michael. (Mississippi State U) **Omission training and extinction in rats with septal damage.** *Physiology & Behavior*, 1975(Aug), Vol 15(2), 149-154.—39 male albino Sprague-Dawley rats with either control operations or septal damage were pretrained on a VI 30-sec schedule and tested for response suppression ability on either an omission training (OT) task or on extinction. Septal damage enhanced barpressing on the VI 30-sec task. Ss with septal damage took longer to suppress responding on the OT task than controls, while lesioned and control Ss tested on extinction did not differ. Increased emotionality was seen in Ss with septal damage on the 1st test day but not thereafter. Ss tested with OT suppressed responding more rapidly than Ss tested on extinction. (22 ref)—*Journal abstract*.

11723. Albert, D. J. & Richmond, S. E. (U British Columbia, Vancouver, Canada) **Septal hyperreactivity: A comparison of lesions within and adjacent to the septum.** *Physiology & Behavior*, 1975(Sep), Vol 15(3), 339-347.—In 2 experiments, male hooded rats were tested for reactivity 2, 7, and 14 days after being given large septal lesions. Lesions which destroyed the septal nuclei bilaterally caused a significant increase in reactivity above that of an operated control group. A similar increase in reactivity was produced by lesions which damaged the bed nucleus of the stria terminalis as well as the septum. A significantly greater level of reactivity was produced when the lesion destroyed the septum and the area ventral to the anterior septum. A 2nd experiment showed that ventral lesions which destroyed primarily the bed nucleus of the stria terminalis caused a small but significant increase in reactivity. With lesions ventral to the anterior septum the increase in reactivity was significantly larger. The increase in reactivity produced by the anterior-ventral lesions was also larger than that produced by lesions of the septum but it was not as great as that produced by combined lesions of the septum and the anterior-ventral area. Results suggest that several areas contribute to the hyperreactivity that is usually attributed to septal lesions. (28 ref)—*Journal abstract*.

11724. Beatty, William W.; Vilberg, Thomas R.; Shirk, Timothy S. & Siders, William A. (North Dakota State U) **Pretraining: Effects on operant responding for food, frustration, and reactivity to food related cues in rats with VMH lesions.** *Physiology & Behavior*, 1975(Nov), Vol 15(5), 577-584.—In Exps I and II, preoperative exposure to an ascending series of FR schedules in operant chamber (pretraining) attenuated the deficit in instrumental responding for food by 20 female Holtzman rats with ventromedial hypothalamic (VMH) lesions. Subsequently, the same Ss were tested in the Amsel double runway. VMH lesions depressed running speed but did not enhance the magnitude of the frustration effect (FE). Pretraining increased running speeds in Ss with VMH lesions, but did not affect the magnitude of the FE. The extremely slow performance in

the 2nd alley by the VMH group without pretraining seemed to result from an exaggerated attraction to the cues associated with feeding in the 1st goal box. Prefeeding Ss in the start box produced a much larger reduction in running speed in the nonpretrained VMH group than in the pretrained VMH group or in 27 controls. To test the possibility that deficits in operant performance might arise because Ss with VMH lesions spend more time investigating the food cup, Exp III studied 10 new Ss that were trained postoperatively on an ascending FR series in a modified chamber with the lever at one end and the food cup at the other. Under these conditions VMH lesions increased the time required to earn 50 reinforcements at all FRs tested, but the distribution of time spent between the end of the chamber with the response lever and the end with the food cup was not altered. (21 ref)—*Journal abstract*.

11725. **Chopin, S. F. & Buerger, A. A.** (U California, Irvine) **Graded acquisition of an instrumental avoidance response by the spinal rat.** *Physiology & Behavior*, 1975(Aug), Vol 15(2), 155-158.—8 pairs of female Sprague-Dawley spinal rats were exposed to an instrumental conditioning paradigm in which 1 animal served as the experimental S and the other as a yoked control. An electrode, inserted into the experimental S's foot, contacted an aqueous solution delivering shock to both Ss. Leg flexion terminated the shock. Following 2 consecutive min without shock, the experimental S's solution was raised an additional millimeter and training was reinstated. This procedure was repeated 4 times, or until the experimental S failed to reach the 2 min criterion. In Run 1, one leg was trained; during Run 2, the contralateral leg was used. In addition, the S which served as the experimental in Run 1 served as the yoked control in Run 2 and vice versa. Results indicate that the spinal rat is capable of acquiring successively higher criteria in an instrumental conditioning routine. Findings suggest that instrumental avoidance learning can occur in the spinal cord.—*Journal abstract*.

11726. **Christensen, Carol A.** (Stanford U) **A comparison of the effects of inferotemporal and foveal prestriate lesions on the visual behavior of monkeys.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-B, Pt 1), 6233.

11727. **Cranford, Jerry L.** (Baylor Coll of Medicine, Houston, TX) **Role of neocortex in binaural hearing in the cat: I. Contralateral masking.** *Brain Research*, 1975, Vol 100(2), 395-406.—Six adult cats with earphones were trained with a shock avoidance procedure to detect the occurrence of 1-kHz tone pulses at one ear while continuous noise pulses were simultaneously presented to the opposite ear. For normal Ss the presence of the noise produced a mean increase of 5.4 db in the thresholds for detection of tones at the opposite ears. After large unilateral auditory cortex ablations, the same Ss exhibited an asymmetry between the ears in the size of the contralateral masking effect. There was a mean increase of 10.9 db in the detection thresholds for tones at the ear contralateral to the damaged hemisphere when noise was presented to the ear opposite the intact hemisphere. Noise of the same intensity presented to the ear contralateral to the damaged cortex produced no significant changes from the preoperative masking levels.

Subsequent ablation of the auditory cortex of the opposite hemisphere resulted in a cancellation of the unilateral lesion effect. Additional control tests indicate that the unilateral lesion effect is a CNS phenomenon specific to lesions of auditory cortex. (32 ref)—*Journal abstract*.

11728. **Dark, John G. & Asdourian, David.** (Wayne State U) **Entrainment of the rat's activity rhythm by cyclic light following lateral geniculate nucleus lesions.** *Physiology & Behavior*, 1975(Sep), Vol 15(3), 295-301.—In a study with 12 male Holtzman rats, lesions of the lateral geniculate nucleus (LGN) disrupted 2 projections, the primary optic tract (POT) and the superior accessory optic tract (AOT-SF). Activity remained entrained to a light cycle following LGN lesions. This indicated that the POT and the AOT-SF are not necessary for entrainment. The 2 remaining projections, the retinohypothalamic pathway and the inferior accessory optic tract (AOT-IF), appear to be sufficient to maintain entrainment. It is suggested that the retinohypothalamic pathway is the key projection for synchrony of the activity rhythm with environmental illumination. It was also found that LGN lesions severely impaired the Ss' ability to learn a brightness discrimination.—*Journal abstract*.

11729. **Elliott, R. C.; Ertlinger, G.; MacCabe, J. J. & Richardson, N.** (Inst of Psychiatry, London, England) **Bimanual motor performance in the monkey: Successive division of the forebrain and of the cerebellum.** *Experimental Neurology*, 1976(Jan), Vol 50(1), 48-59.—Notes that section of the forebrain commissures has only a transient effect on bimanual motor performance in the monkey, but callosal section combined with midsagittal division of the cerebellum might be expected to reveal a deficit on tasks requiring the simultaneous use of 2 hands. In the present experiment, 3 tasks—2 requiring simultaneous operation of 2 manipulanda, the 3rd requiring a differential response with each hand according to the surface texture of a lever on each side of the apparatus—were used to assess the effect in 12 rhesus monkeys of combined callosal and cerebellar division in the absence of vision. Although the predominant finding is that there was no substantial impairment on any of the 3 tasks compared to performance of 5 controls, certain of the Ss were transiently impaired on the 1st 2 tasks. The significance of this finding is discussed in relation to alternative anatomical pathways which could mediate the learned performance in the absence of midline callosal and cerebellar fiber tracts. (17 ref)—*Journal abstract*.

11730. **Enloe, Linda J.** (Ohio State U) **Extralimbic mediation of emotionality and social cohesiveness effects.** *Physiology & Behavior*, 1975(Sep), Vol 15(3), 271-276. 128 Long-Evans hooded male rats were tested for emotionality and observed by pairs in an open field for 6 consecutive days. Postoperative observations indicated that both emotionality and social cohesiveness were dramatically altered by ventromedial and anterolateral hypothalamic lesions. Tegmental, interpeduncular, and habenular lesions had no effect on these behaviors. Alterations in behavior observed following hypothalamic ablations were related to septal and amygdaloid effects. The possibility of separate projection systems for

emotionality and social cohesiveness is discussed. (28 ref)—*Journal abstract.*

11731. **Finger, Stanley & Reyes, Renato.** (Washington U, St Louis) **Long-term deficits after somatosensory cortical lesions in rats.** *Physiology & Behavior*, 1975(Sep), Vol 15(3), 289-293.—Male Sprague-Dawley rats having either sham operations or 1-stage bilateral lesions of the 2 somatosensory areas of the cortex were tested for acquisition of 5 tactile discriminations after postoperative recovery intervals of 14, 35, 180, 365, or 730 days. The group with lesions performed worse than its time-matched control group in every instance, and there was no evidence for recovery of function with the longer postoperative recovery periods. Results suggest that time per se is not a significant determinant of restitution after somatosensory cortical ablations. (32 ref)—*Journal abstract.*

11732. **Gabrić, Dora & Soljačić, Marija.** (U Zagreb, Faculty of Medicine, Yugoslavia) **Effect of gonadectomy on taste preference for glucose solutions in rats.** *Physiology & Behavior*, 1975(Aug), Vol 15(2), 145-148.—In 3 experiments, a total of 31 female and 10 male mature rats maintained on an ad lib diet were given a choice between tap water and glucose solutions of different concentrations (1, 5, and 12%). Both sexes exhibited a definite preference for the 12% solution, but the females drank significantly more than males. Gonadectomy produced neither quantitative nor qualitative changes in the choice made by males. On the contrary, gonadectomized females showed a depression of the 12% solution intake and an increase in the 5% solution intake, resulting in a decrease of the total intake. A comparison of ovariectomized and intact female rats in regard to the self-selection of tap water and a 5% glucose solution confirmed the stimulatory effect of ovariectomy on the 5% solution intake. When a choice between tap water and a 12% glucose solution was permitted the ovariectomized Ss showed a weaker positive response to the sweet solution than the intact females.—*Journal abstract.*

11733. **Goldenberg, Robert A. & Derbyshire, Arthur J.** (U Illinois, Abraham Lincoln School of Medicine, Chicago) **Average evoked potentials in cats with lesions of auditory pathway.** *Journal of Speech & Hearing Research*, 1975(Sep), Vol 18(3), 420-429.—Experimental results in adult cats support the premise that change in the waveform of the early evoked potential can be used to determine site of loss of acoustic information along the auditory pathway.

11734. **Kirkby, Robert J.** (Lincoln Inst, Carlton, Australia) **Caudate nucleus lesions and rearing responses.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 981-982.—Observations of lesioned male Wistar rats showed that frequencies of rearing were greatest for unoperated and frontal lesioned Ss and least for those with caudate lesions. Increased arousal of Ss with caudate lesions was suspected.

11735. **Laughlin, Michael E.; Donovick, Peter J. & Burright, Richard G.** (State U New York, Binghamton) **Septal lesions in meadow voles and mongolian gerbils. Consummatory and investigatory behavior.** *Physiology & Behavior*, 1975(Aug), Vol 15(2), 191-198.—In 2 experiments with 22 gerbils and 12 voles, differences were

found in both the absolute amount of fluids consumed and reactivity to the palatability of the fluids presented in a single tube. Septal lesions did not elevate water consumption of either species. Septal lesioned gerbils tended to consume more sucrose, and septal voles clearly did drink more sucrose than their control counterparts. But only lesioned voles suppressed intake below control levels when presented with quinine. Exploratory behavior, which was measured only in gerbils, was also altered by septal lesions. Measurement of testosterone, seminal vesicles, and ventral marking glands (gerbils only) indicated that septal lesions alter hormonal systems in at least this species. The importance of comparative investigations in elucidating the general function of brain structures is discussed. (24 ref)—*Journal abstract.*

11736. **Lewis, Michael E. & Stein, Donald G.** (Clark U) **Pattern discrimination after lesions of the visual cortex.** *Science*, 1975(Nov), Vol 190(4217), 914-915.—Argues that the conclusion of D. Dru et al (see PA, Vol 54:4737) that "recovery of pattern vision after sequential removal of visual cortex is probably a consequence of functional reorganization of brain areas not primarily responsible for visual capacity" is not valid based on the evidence given. A rebuttal of this criticism by D. Dru is included.

11737. **Lytle, Loy D. & Campbell, Byron A.** (Massachusetts Inst of Technology) **Effects of lateral hypothalamic lesions on consummatory behavior in developing rats.** *Physiology & Behavior*, 1975(Sep), Vol 15(3), 323-331.—Reports data from 3 experiments which show that bilateral lesions of the lateral hypothalamus of preweanling albino rats resulted in decreased weight gain and eventual death within 5 days after the operation. 10-day-old rats with unilateral damage to the lateral hypothalamus show retarded growth, food and water intake regulatory deficits, and altered sensitivity to quinine adulteration of the water for up to 60 days of age. Results suggest that at least one neural mechanism that regulates food and water intake matures early in the postnatal life of the rat. (24 ref)—*Journal abstract.*

11738. **McKinney, T. D.; Vaughan, M. K. & Reiter, R. J.** (U Texas, Div of Allied Health & Life Sciences, San Antonio) **Pineal influence on intermale aggression in adult house mice.** *Physiology & Behavior*, 1975(Aug), Vol 15(2), 213-216.—105 previously isolated, adult male mice of a wild-derived strain were sham-operated pinealectomized (PI); 14 days later Ss were paired for 15 min, then grouped 3 in a cage for 7 days. During 15-min pairings, mean latency to initiation of fighting was increased twofold and duration of fighting was reduced 35-41% in pairs comprised of 1 or both PI Ss. Although pinealectomy failed to influence which pair member initiated fighting, sham mice were ranked as dominant in 75% of the sham PI pairs. Pinealectomy reduced adrenal gland weights among isolated Ss and increased in general the effects of social subordination in grouped mice. Compared to sham subordinates, PI subordinates experienced adrenal enlargement and twofold greater wounding and had lighter thymus glands and final body weights. Additionally, however, pinealectomy prevented effects of social subordination on subordinates. Results suggest a role of the pineal gland in influencing intermale

aggression and linking social stimuli with testis dysfunction in adult house mice. (26 ref)—*Journal abstract*.

11739. Murphy, E. H.; Mize, R. Ranney & Schechter, P. B. (U Chicago) **Visual discrimination following infant and adult ablation of cortical areas 17, 18, and 19 in the cat.** *Experimental Neurology*, 1975(Nov), Vol 49(2), 386-405.—Seven cats with ablations of visual cortical areas 17, 18, and 19 made in adulthood or infancy and normal cats were trained on a light-dark and a horizontal-vertical discrimination. No differences between groups were observed in the light-dark discrimination. In the horizontal-vertical discrimination, adult-operated Ss showed severe deficits, but the performance of infant-operated Ss was similar to that of normals. Patterns of retrograde degeneration of the lateral geniculate nucleus differed for infant- and adult-operated Ss: the lateral geniculate nucleus of infant operates, but not of adult operates, showed scattered intact surviving neurons which were not related to sparing of visual cortex. These neurons may be involved in pattern discrimination abilities in infant-operated cats. (34 ref)—*Journal abstract*.

11740. Myhrer, Trond. (U Oslo, Inst of Neurophysiology, Norway) **Locomotor and avoidance behavior in rats with partial or total hippocampal perforant paths sections.** *Physiology & Behavior*, 1975(Aug), Vol 15(2), 217-224.—In 2 experiments with a total of 55 male albino Möll-Wistar rats, bilateral partial damage to the hippocampal perforant paths produced impaired 2-way active avoidance performance, while the behavior in open field, passive, and 1-way active avoidance remained unchanged. Total disruption of the perforant path projection resulted in increased open field activity and impaired 1-way active avoidance, but normal passive avoidance behavior. Results are discussed in terms of reduced sensory information to the hippocampal formation. (32 ref)—*Journal abstract*.

11741. Oakley, David A. & Russell, I. Steele. (MRC, London, England) **Role of cortex in Pavlovian discrimination learning.** *Physiology & Behavior*, 1975(Sep), Vol 15(3), 315-321.—Trained 2 totally neocorticate rabbits and 2 groups of normal New Zealand White rabbits on a light tone differentiation using a Pavlovian nictitating membrane response. The significant of the 2 stimuli involved in the differentiation was then reversed. Excellent initial differentiations were produced by both decorticates and normals, although there was some evidence of a small retardation of conditional response acquisition in the decorticates in this 1st stage of the experiment. Under reversal conditions the decorticates extinguished responding to the formerly positive conditional stimulus in fewer trials and produced more complete differentiation performances than normal Ss. The decorticates, unlike the normal Ss, failed to show a reduction in conditional response onset latencies during either differentiation or reversal training. (16 ref)—*Journal abstract*.

11742. Pihl, Robert & Shore, Howard. (McGill U, Montreal, Canada) **Arousal and activity level of rats with lesions in the dorsal hippocampus.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 815-820.—Assessed the effect on gross locomotor activity of irrelevant stimuli, prior exposure to these stimuli, and 2 dosages of

amphetamine (1 and 3 mg/kg, ip) in 12 lesioned male hooded rats. Ss were significantly more active postoperatively than 12 sham-lesioned Ss. Prior exposure to the irrelevant stimuli increased postoperative differentiation between stimuli, whereas the introduction of amphetamine had the reverse effect. Changes in locomotor activity occurred at lower dosages of amphetamine than in previous studies, suggesting that the irrelevant stimuli had an arousal effect which acted additively with amphetamine and hippocampal impairment.—*Journal abstract*.

11743. Poplawsky, Alex. (Bloomsburg State Coll) **Effects of septal-fiber knife cuts on rat open-field social behavior.** *Physiology & Behavior*, 1975(Aug), Vol 15(2), 177-184.—Observed 110 male hooded Long-Evans rats that received various septal fiber tract knife cuts in an open field to assess preoperative and postoperative social behaviors. Ventral septal fiber, isolated septum, and anterior-lateral knife cuts resulted in increases in contact time, decreases in aggressive behavior/100 sec contact time, and no change in the number of contacts. Anterior, posterior, or dorsal fiber knife cuts failed to produce significant changes in contact time, aggressive or submissive behavior, number of contacts, and activity. A postoperative decrease in initiating aggressive behaviors may explain increases in contact time following ventral septal fiber, isolated septum, and anterior-lateral knife cuts. The ventral-septal fiber tracts were critical in mediating social behavior, implying that there is a functional connection through the ventral fibers between structures beneath the septum (hypothalamus) and the septal nuclei. (23 ref)—*Journal abstract*.

11744. Prado-Alcalá, R. A. et al. (U Nacional Autónoma, Facultad de Medicina, Mexico City, Mexico) **Learning deficits produced by chronic and reversible lesions in the corpus striatum in rats.** *Physiology & Behavior*, 1975(Sep), Vol 15(3), 283-287.—In Exp I with 44 male albino rats, the reversible disruption of the normal activity of the corpus striatum (CS) by microinjections of potassium chloride (1 or 2 μ l) produced a marked impairment on the acquisition of a 1-trial passive avoidance task. 2 additional experiments with a total of 58 Ss showed the same performance deficits on the acquisition as well as on the retention of the task when the CS was electrolytically lesioned. Since 2 different methods of disrupting the functional integrity of the striatum were used, it is concluded that the results are not due to the peculiarities of a single method. Results support the hypothesis of critical involvement of the CS in the integration and storing of learned information.—*Journal abstract*.

11745. Raczkowski, Denis; Casagrande, Vivien A. & Diamond, Irving T. (Duke U) **Visual neglect in the tree shrew after interruption of the descending projections of the deep superior colliculus.** *Experimental Neurology*, 1976(Jan), Vol 50(1), 14-29. Four tree shrews received tegmental lesions aimed at a transection of those fibers from the deep superior colliculus which cross and descend in the predorsal bundle. In 2 cases complete transection caused a profound deficit in attention which resembled "visual neglect" as that term is used in the neurological clinic. In 2 cases with lesser lesions, the deficit was less severe. While all Ss showed some defects

in tracking, orienting, and following, and while all tended to sit motionless, they all retained the capacity to discriminate patterns and showed other evidence that they had no sensory or motor loss or a defect in emotion, learning, or level of consciousness. It is concluded that neglect is a specific deficit in attention and is the result of transecting efferent descending pathways from the deep layers of superior colliculus. Since the deep superior colliculus receives fibers from the cortex, it is suggested that neglect in man may be caused by some disruption of the deep tectal system which is normally dependent on the cortex. (18 ref)—*Journal abstract*.

11746. Robinson, Robert G. et al. (NIMH, Lab of Neuropharmacology, St Elizabeth's Hosp, Washington, DC) **Effect of experimental cerebral infarction in rat brain on catecholamine and behaviour.** *Nature*, 1975(May), Vol 255(5506), 332-334.—Measured catecholamine concentration—noradrenaline (NA) and dopamine (DA)—in six brain regions of 52 lesioned and 42 sham-lesioned male Sprague-Dawley rats 5, 20, and 40 days after vascular lesion. Spontaneous horizontal and vertical activity, and shock-induced aggression, were also measured. The effects observed in the 2 groups of Ss, in the different brain regions, at different times, and the behavioral effects, are presented in detail. Results are believed to provide evidence that the response of catecholamine neurones to vascular injury may cause the emotional changes seen after stroke in human beings, and to suggest the applicability of pharmacological treatments for these changes. (32 ref)—*I. Davis*.

11747. Rosen, Jeffrey; Butters, Nelson; Soeldner, Carol & Stein, Donald. (Boston U) **Effects of one-stage and serial ablations of the middle third of sulcus principalis on delayed alternation performance in monkeys.** *Journal of Comparative & Physiological Psychology*, 1975(Nov), Vol 89(9), 1077-1082. Investigated recovery of a spatial delayed alternation habit following partial frontal lesions in 9 mature rhesus monkeys. All Ss subjected to serial ablation of the middle third of sulcus principalis were found to be capable of reacquiring preoperative levels of performance on the task. However, 1-stage removal of the mid-principalis region resulted in both more severe and more protracted impairments than were evident after serial surgery. Results in conjunction with previous findings suggest that recovery following serially induced neurological insult may be dependent upon the integrity of neural tissue adjacent to the locus of injury.—*Journal abstract*.

11748. Sanderson, John D. & Vanderweele, Dennis A. (Occidental Coll) **Analysis of feeding patterns in normal and vagotomized rabbits.** *Physiology & Behavior*, 1975(Sep), Vol 15(3), 357-364. Assessed spontaneous meal sizes, intermeal intervals, and 24-hr feeding rhythms in normal and 60-day recovered vagotomized female New Zealand rabbits fed solid laboratory chow. Mean sizes of meals and intermeal intervals, and the circadian distribution of food intake did not differ between the 2 groups, but vagotomy was associated with increased frequencies of both smaller and larger than average meals. Positive meal to postmeal interval correlations were evident in intact but not vagotomized Ss, whereas vagotomized Ss displayed a meal to premeal

interval correlation in the light phase that was not present in normals. (46 ref)—*Journal abstract*.

11749. Soper, H. V.; Diamond, I. T. & Wilson, Martha. (U Connecticut) **Visual attention and inferotemporal cortex in rhesus monkeys.** *Neuropsychologia*, 1975(Oct), Vol 13(4), 409-419.—Four rhesus monkeys with inferotemporal lesions were inferior to their normal controls ($n = 4$) in relearning a visual discrimination problem with variable, irrelevant cues and in shifting responses to the previously irrelevant cues. Reducing the variability and/or amount of information improved the performance of the inferotemporal group. Results are interpreted in terms of a "trade-off" model of visual attention. (French & German summaries)—*Journal abstract*.

11750. Spevack, Abraham A.; Campbell, Charles T. & Drake, Lawrence. (Virginia Polytechnic Inst & State U) **Effect of amygdectomy on habituation and CER in rats.** *Physiology & Behavior*, 1975(Aug), Vol 15(2), 199-207.—60 amygdectomized, sham-operated, and unoperated male Long-Evans rats received 20 habituation trials followed by conditioned emotional response (CER) training during which the habituation stimulus was made a CS for 10 CS-UCS pairings. Although no reliable differences in rate or magnitude of habituation as measured by suppression ratio magnitudes and intertrial interval durations were apparent between any groups, these same measures indicated that substantial deficits in conditioned suppression were produced by bilateral amygdectomy. In addition the lesion produced a reliable deficit in unconditioned suppression and a slight but reliable reduction in the number of ccs of water consumed in a 24-hr period. Results are consistent with the hypothesis that amygdectomy interferes with the arousal of fear. (32 ref)—*Journal abstract*.

11753. Willott, James F. (U California, Davis) **Effects of unilateral spinal cordotomy and outer ear occlusion on audiogenic seizures in mice.** *Experimental Neurology*, 1976(Jan), Vol 50(1), 30-35.—Investigated the influence of bodily movements upon audiogenic seizures by performing a series of unilateral hemisections on 99 DBA 2J mice. Ss were given either left, right, or sham (69 Ss) midthoracic hemisection of the spinal cord and were subsequently tested with the contralateral, ipsilateral, or neither ear occluded with glycerol. Occlusion of 1 ear decreased the severity of seizures. More interestingly, among the unilaterally occluded Ss, hemisection ipsilateral to the open ear reduced the severity of seizures compared to controls, while hemisection contralateral to the open ear had a nonsignificant effect. Findings suggest that specific neural pathways in the spinal cord normally contribute to audiogenic seizures and that interruption of these pathways interferes with seizure processes in the brain.—*Journal abstract*.

11754. Wishart, Thomas B. & Walls, Elwood K. (U Saskatchewan, Saskatoon, Canada) **Water intoxication death following hypothalamic lesions in the rat.** *Physiology & Behavior*, 1975(Sep), Vol 15(3), 377-379.—45 male albino rats received large, bilateral lesions of the ventromedial hypothalamus. Water or saline intakes, urine outputs, and body temperatures were observed for up to 24 hrs after surgery. 50% of the operated Ss drank excessively and died within 4-6 hrs when permitted access to water. Urine outputs were low and symptoms of water intoxication were evident. When allowed access to saline, outputs rose and the number of Ss which survived increased as the saline concentration increased. Body temperatures approached 40°C during drinking, but did not differ from operated Ss which refused to drink. It is concluded that the deposition of metallic ions strongly stimulates a hypothalamic drinking system which results in overhydration and water intoxication death. (16 ref)—*Journal abstract*.

Drug Stimulation & Psychopharmacology

11756. Abel, E. L. (Research Inst on Alcoholism, Buffalo, NY) **Cannabis: Effects on hunger and thirst.** *Behavioral Biology*, 1975(Nov), Vol 15(3), 255-281.—Reviews the effects of cannabis and its derivatives on food and water intake in humans and animals. Possible mechanisms underlying these effects are discussed. The stimulating effect of cannabis on hunger may be peculiar to humans, since with a few exceptions, it does not occur in animals; the role of suggestion in this phenomenon is noted. The finding that cannabis reduces food intake in animals is briefly examined in relation to the use of food as a reinforcer. It is concluded that no unequivocal explanations for the phenomenon in humans or animals are readily acceptable and that a general consideration of the problem raises more questions than answers. (6% p ref)—*Journal abstract*.

11757. Alpern, Herbert P. et al. (U Colorado) **Methaqualone: Tolerance and physical dependence in mice.** *Psychopharmacologia*, 1975, Vol 44(3), 303-305.

—Tolerance and physical dependence was produced in C57BL/6 male mice that had been exposed for 36 days to methaqualone in food. Tolerance was revealed in the reduction of sleep times following ip injection of methaqualone. Physical dependence was manifested as an alteration in neural sensitivity to flurothyl-induced convulsions. (20 ref)

11758. Ando, Kiyoshi. (Central Inst for Experimental Animals, Kawasaki, Japan) **Profile of drug effects on temporally spaced responding in rats.** *Pharmacology, Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 833-841.—Used a DRL schedule with 36 male Sprague-Dawley rats to test 15 psychotropic drugs. The computer analysis was based on interresponse time (IRT). Mean IRT, IRT standard deviation, median IRT, IRT mid-range, modal IRT, frequency of modal IRT, and an efficiency index in addition to numbers of responses and reinforcements and the IRT histogram were obtained for each S in each drug test. An increase in number of

responses and a peak shift to shorter IRTs in the histograms were observed with amphetamine, methamphetamine, pipradrol, and nicotine. Decrease in IRT midrange and less change in number of responses were observed with diazepam and chlordiazepoxide. Long pauses were found with LSD-25, 2,5-dimethoxy-4-methylamphetamine (DOM), and mescaline. Factor analysis showed high values in factor loading a_1 with chlorpromazine, chlordiazepoxide, pentobarbital, imipramine, nialamide, LSD-25, DOM, and mescaline. With these drugs, mean IRT and IRT standard deviation were also high. Values for a_1 were high with amphetamine, methamphetamine, pipradrol, and nicotine. High a_2 values were observed in some Ss with chlorpromazine, diazepam, chlordiazepoxide, pentobarbital, pipradrol, and caffeine. The changes in a_2 values were correlated with changes in the IRT midrange. Results may be valuable in classifying new compounds in drug screening programs as being of the amphetamine, nicotine, diazepam, or LSD-25 types. (24 ref)—*Journal abstract*.

11759. Anisman, Hymie. (Carleton U, Ottawa, Canada) **Differential effects of scopolamine and D-amphetamine on avoidance: Strain interactions.** *Pharmacology Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 809-817.—In 3 experiments employing 70 mice of each of the A/J, DBA/2J, and C57BL/6J strains in a discriminated Y-maze avoidance task, it was observed that Ss of the A/J strain were superior to those of the DBA/2J strain, which in turn made more avoidance responses than C57BL/6J Ss. Moreover, the A strain acquired a discrimination problem more readily. Administration of scopolamine enhanced active avoidance performance in A, but not DBA/2 or C57BL/6 Ss. Dextro-amphetamine improved performance in both A and DBA/2 Ss but had negligible effects on the performance of the C57BL/6 strain. Neither drug affected discrimination performance irrespective of strain. In an inhibitory avoidance task the C57BL/6 strain performed more poorly than the A strain which was inferior to DBA/2 Ss. Scopolamine disrupted performance in all 3 strains, while amphetamine disrupted the performance of the A and DBA/2 strains only. Results are interpreted in terms of the role of associative and nonassociative effects of shock in modulating avoidance behavior. (43 ref)—*Journal abstract*.

11760. Anisman, Hymie; Wahlsten, Douglas & Kokkinidis, Larry. (Carleton U, Ottawa, Canada) **Effects of d-amphetamine and scopolamine on activity before and after shock in three mouse strains.** *Pharmacology Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 819-824.—In 3 experiments using 88 mice of each of the A/J, DBA/2J, and C57BL/6J strains, the following results were obtained: (a) Activity was greater both prior to and following exposure to shock among C57BL/6J Ss than among DBA/2J, which in turn was greater than that of A/J Ss. (b) Scopolamine hydrobromide increased general activity in DBA/2 and A strains but had either no effect or decreased activity in the C57BL/6. Following exposure to shock, however, the disinhibitory effects of scopolamine were apparent in all 3 strains. (c) Dextro-amphetamine increased activity in all 3 strains. Following a single shock, amphetamine had excitatory effects among both A and DBA/2 Ss such that activity

exceeded the level observed with amphetamine alone. Following several shock presentations a small but significant excitation was observed in C57BL/6 Ss as well. Data are interpreted in terms of disinhibitory and excitatory effects of scopolamine and amphetamine, respectively, as well as possible interactions between the catecholaminergic and cholinergic systems. Implications for sources of strain differences in avoidance behavior are discussed. (32 ref)—*Journal abstract*.

11761. Banerjee, Utpal. (U Malaya, Faculty of Medicine, Kuala Lumpur, Malaysia) **Conditioned avoidance behavior in pretrained rats intermittently treated with addictive drugs.** *Physiology & Behavior*, 1975(Sep), Vol 15(3), 349-356.—Administered 8 potentially addictive drugs in drinking water at 2 dose levels each to White Norwegian rats pretrained in a conditioned avoidance (CAR) paradigm. Fluid intake and body weight, monitored during the drugged (addiction) and nondrugged (withdrawal) states, showed dose-dependent fluctuations in most groups. CAR performance generally deteriorated in the early drug phase but improved to near normalcy during the late drug and withdrawal phases in all groups, except for alcohol and barbiturate-treated ones. Excluding amphetamine, low-dose morphine, and phenobarbital groups, substantial extinction of CAR occurred during the drug phase only; these 3 groups, as well as the high-dose alcohol, barbiturate, and medazepam ones, also showed extinction during the nondrug phase. The rate and extent of a 2nd-order relearning neither differed significantly between the groups nor was truly contingent upon prior extinction. (32 ref)—*Journal abstract*.

11762. Bäumler, Günther. (Technische U Munchen, W Germany) [Effects of psychoactive drugs on achievement motivation: III. Differential effects of content categories.] (Germ) *Zeitschrift für Experimentelle und Angewandte Psychologie*, 1975, Vol 22(4), 535-546.

Continues the analyses of effects of methylphenidate and chlorpromazine by separating the emotional content from the goal-oriented content of the TAI protocols. Both drugs increased the success-oriented action motives and lowered the failure motives significantly. Consequently the goal-oriented expectation was greater in both cases. Male Ss showed significantly higher expectation values than female Ss. (English & French summaries) —W. J. Kopitz.

11763. Beer, Bernard & Lenard, Lane G. (Scripps Inst for Medical Research, Princeton, NJ) **Differential effects of intraventricular administration of 6-hydroxydopamine on behavior of rats in approach and avoidance procedures: Reversal of avoidance decrements by diazepam.** *Pharmacology, Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 879-886. In Exp I the administration of 6-hydroxydopamine (6-OHDA) and pargyline to male Sprague Dawley rats produced similar selective decreases in responding during the conditioned stimulus (CS) on a discriminated avoidance test where the UCS was shock and on an analogous conditioned approach test where the UCS was water. Approach behavior during the CS generally recovered, however while avoidance decrements in the same Ss remained for the duration of testing. This suggested that 6-OHDA induced avoidance decrement was a result of 2 inde-

pendent but interacting processes: (a) a decrease in conditioned behavior as reflected by the similar decrease in responding on both tests and (b) a hyper-reaction to aversive stimuli that resulted in a tendency to selectively suppress avoidance behavior after shock. In support of this hypothesis, it was found in Exp II that 6-OHDA-induced avoidance decrements could be reversed by treatment with diazepam, a drug that releases suppressed responses, or by delaying avoidance testing until conditioned responding had recovered, thus minimizing the interaction of the 2 processes. (33 ref)—*Journal abstract*.

11764. Binitie, Ayo. (U Benin, Nigeria) **Psychosis following ingestion of hemp in children.** *Psychopharmacologia*, 1975, Vol 44(3), 301-302.—Presents 2 cases of young males (ages 3 and 11 yrs) in whom moderately severe behavior disorder and toxic psychosis, respectively, followed the ingestion of hemp. The illnesses lasted about 4 mo, presented a picture of reversible cerebral damage, and responded rapidly to tranquilizers such as phenothiazine and chlorpromazine.

11765. Brown-Grant, K. (U Oxford, England) **A re-examination of the lordosis response in female rats given high doses of testosterone propionate or estradiol benzoate in the neonatal period.** *Hormones & Behavior*, 1975(Dec), Vol 6(4), 351-378.—High lordosis quotients (LQ) were observed when female Wistar rats injected with testosterone propionate (TP) on Day 4 of postnatal life were tested as intact adults. High LQ values were found in similar tests on adult female rats of 2 Lister strains injected with TP on Day 4 of life. A marked reduction of the facilitatory action of progesterone on receptivity in estrogen-primed animals was demonstrated in the females of all 3 strains treated with TP or estradiol benzoate (EB) during the neonatal period and for males after castration as adults. Mating tests showed that females anovulatory following TP or EB during the neonatal period and tested either intact and under the influence of endogenous hormones or under the influence of exogenous estrogen showed a rapid and highly significant increase in receptivity during the course of prolonged tests. This effect was very much reduced if the treated females were under the influence of exogenous estrogen plus progesterone. A significant increase in LQ was observed in Wistar females which were anovulatory as a result of exposure to constant light and were tested intact without any exogenous hormone being administered. It is suggested that tests involving a limited number of mounts or attempts to mount at low rates over a short period of time may not be adequate to establish the capacity of female rats treated with steroid hormones during the neonatal period to display the lordosis response. (30 ref)—*Journal abstract*.

11766. Carder, Brooks & Sbordone, Robert. (U California, Los Angeles) **Mescaline treated rats attack immobile targets.** *Pharmacology Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 923-925.—24 male Sprague-Dawley rats were exposed to a series of targets (72 other rats or a rat model) in a shock-induced aggression situation. Control Ss fought most with moving targets, such as another normal S, and did not attack immobile targets, such as a dead S or a rat model. Ss treated with 15 mg/kg mescaline showed a similar pattern of target control, though they bit frequently while controls did not

bite. Ss treated with 50 mg/kg delivered vigorous biting attacks to a variety of targets but fought most with the immobile dead S. They failed to attack only the rat model. Many of the data are consistent with the hypothesis that mescaline releases aggressive behavior from inhibitory control, leading to longer and more vigorous attacks on a wider variety of targets. This hypothesis, however, fails to explain why stationary targets were most effective for Ss treated with 50 mg/kg mescaline, while only moving targets were effective for controls.—*Journal abstract.*

11767. Chipkin, Richard E.; Dewey, William L.; Harris, Louis S. & Lowenthal, Werner. (Virginia Commonwealth U) **Effect of propranolol on antinociceptive and withdrawal characteristics of morphine.** *Pharmacology, Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 843-847.—In experiments with 60 male Swiss-Webster albino mice and 18 male Sprague-Dawley rats, propranolol (10 mg/kg), which did not alter tail-flick latency by itself, did not alter the effective dose of morphine when given 10 min prior to the narcotic. Propranolol at doses of 10 and 25 mg/kg given 10 min prior to naloxone challenge did not significantly alter the frequency of naloxone-induced jumping 72 hrs after morphine pellet implantation. The effective dose of naloxone in morphine pelleted mice was not altered by treatment with propranolol at 0, 24, and 48 hrs after pellet implantation. Naloxone caused hyperactivity in mice when administered 72 hrs after morphine pellet implantation. An injection of 25 mg/kg propranolol 10 min prior to naloxone did not block this hyperactivity. In addition, administration of 10 mg/kg of propranolol every 8 hrs to rats during withdrawal from morphine failed to alleviate the withdrawal syndrome, as evidenced by changes in either body weight or water intake. Data suggest that the beta-adrenergic blocking agent, propranolol, does not alter the antinociceptive activity or lessen the withdrawal syndrome of morphine in rodents. (18 ref)—*Journal abstract.*

11768. Cooper, James R. & Silvio, Joseph R. (National Inst On Drug Abuse, Div of Community Assistance, Bethesda, MD) **Propoxyphene napsylate (Darvon N): A new indication for a drug?** *Journal of Psychedelic Drugs*, 1974(Oct-Dec), Vol 6(4), 415-420.—Reviews the characteristics of a new analgesic drug for opiate detoxification. Propoxyphene hydrochloride shows cross-tolerance with opiates, but convulsions and death may result from overdose. A new form of the same drug, propoxyphene napsylate, shows slower absorption in animal studies and is probably safer. However, clinical use of the drug must be preceded by (a) the absorption rate in human beings, particularly with concomitant alcohol consumption; (b) the dosages equivalent to morphine and methadone; and (c) toxicity under a chronic high-dose administration. (25 ref)—*S. Nakajima.*

11769. Coyle, I. R. & Singer, G. (La Trobe, Bundoora, Australia) **The interactive effects of prenatal imipramine exposure and postnatal rearing conditions on behaviour and histology.** *Psychopharmacologia*, 1975, Vol 44(3), 253-256.—36 offspring of 16 female Wistar albino rats given oral doses of saline or imipramine (5mg/kg) from 14-21 days prior to mating till parturition were reared, after weaning, in deprived or enriched environ-

ments. At 25-27 days and at 80-83 days the home cage behavior of the Ss reared in the enriched environment was observed. Histological measures of brain development in both the deprived and enriched Ss were taken at the conclusion of behavioral observations. The imipramine-exposed offspring failed to show the characteristic histological changes associated with enriched rearing conditions. In addition they were behaviorally unresponsive and spent significantly less time than the saline offspring interacting with other animals and the environment. It is argued that the physiological and behavioral unresponsiveness of the imipramine offspring was due to a subtle teratogenic effect which prevented the Ss from interacting with the environment.—*Journal abstract.*

11770. Coyle, Ian R. (La Trobe U, Bundoora, Australia) **Changes in developing behavior following prenatal administration of imipramine.** *Pharmacology Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 799-807.—In 3 experiments, 61 female Wistar rats were given oral doses of imipramine (5mg/kg) or placebo from 14-21 days prior to mating to conception or Day 19 of gestation and the physical maturation and behavioral development of offspring of experimental Ss was compared with that of controls ($N = 208$). There were significant differences between the weights of the imipramine and control pups at 21 days, and the appearance of some reflexes was delayed. Behavior in an open field was observed when the Ss were 9, 13, 17, and 21 days of age, and it was found that exploratory responses were less frequent in the drug exposed offspring. In contrast there were no obvious physical anomalies, and the adult behavior of the imipramine Ss on a spontaneous alternation task and a swimming maze did not differ from that of controls. (31 ref)—*Journal abstract.*

11771. Cressman, Reginald J. (U Waterloo, Canada) **Voluntary consumption of ethyl alcohol by monkeys: Social behavior determinants and consequences.** *Dissemination Abstracts International*, 1974(Apr), Vol 34(10-B), 5219.

11772. Criswell, Hugh E. & Levitt, Robert A. (Williams Coll) **Adrenergic effects on hypothalamic activity: Alpha and beta agonists and antagonists.** *Bulletin of the Psychonomic Society*, 1975(Jun), Vol 5(6), 485-488. In a study with 72 male Long-Evans rats, dose-response curves were plotted to analyze the effects of adrenergic agonists and antagonists upon neural activity within the hypothalamus. Multiple unit activity (MUA) was recorded following microinjection of the drugs directly into the recording site through a hollow recording electrode. Dose-dependent decreases in MUA occurred following the microinjection of the alpha-adrenergic agonist 1-norepinephrine and also following low, but not high, doses of the alpha-adrenergic agonist phentolamine. Neither the beta-adrenergic agonist isoproterenol nor the beta-adrenergic antagonist propranolol produced dose-related effects upon MUA at the sites tested. A small nonbiochemically specific decrease in MUA was also found to follow all microinjections into the lateral or ventromedial hypothalamus when any compound was microinjected, including isotonic saline.—*Journal abstract.*

11773. Crow, Lowell T. & Ball, Corbin. (Western Washington State Coll) **Alcohol state-dependency and autonomic reactivity.** *Psychophysiology*, 1975(Nov), Vol 12(6), 702-706.—Assigned 52 undergraduates to alcohol (A) or no alcohol (S) treatment groups to provide SS, SA, AS, and AA drug sequences in a training and a 24-hr subsequent testing session. Alcohol by vodka mixed with a soft drink (soft drink alone as placebo) was given within a 1-hr period preceding the particular session. Behavioral measures consisted of word association recall (WA), picture identification (PI), and time and errors in the completion of a finger maze (MT, ME). Physiological measures of EEG, heart rate (HR), finger pulse volume (FPV), skin resistance (SR), and respiration rate were recorded. Behavioral state-dependent effects were noted for both the WA and PI tasks, but not for MT or ME. State-dependent effects were indicated for HR, FPV, and SR. Multiple linear regression coefficients for WA and PI as dependent variables and HR, FPV, and SR as predictors were significant for WA for the AS and SA groups combined, but not significant for the SS and AA groups combined. Results are discussed as they relate to arousal and drug stimulus hypotheses of state-dependency. (17 ref)—*Journal abstract*.

11774. Culver, Bruce & Norton, Stata. (U Kansas Medical Ctr) **Juvenile hyperactivity in rats after acute exposure to carbon monoxide.** *Experimental Neurology*, 1976(Jan), Vol 50(1), 80-98.—It has been proposed that perinatal anoxia may be one cause of the syndrome of minimal brain dysfunction in children in which hyperactivity develops at an early age and diminishes or disappears with maturation of the brain during adolescence. Results of the present study, which show rapid onset and complete reversibility of hyperactivity in rats exposed to carbon monoxide as neonates, make this form of anoxic damage an interesting and useful model for further investigation. (41 ref)

11775. Cutler, Margaret G. & Mackintosh, J. H. (U Birmingham, England) **Effects of delta-9-tetrahydrocannabinol on social behaviour in the laboratory mouse and rat.** *Psychopharmacologia*, 1975, Vol 44(3), 287-289.

Studied the behavioral effects of delta-9-tetrahydrocannabinol (THC) in 40 male CFW mice and 12 male G-strain rats by an ethological analysis of encounters between Ss injected ip with the drug and partners injected with the solvent. In both species, immobility was increased and nonsocial activity reduced after injections of 5 mg/kg THC. Flight was increased in treated mice but not in treated rats. Aggression was not significantly altered in either species. Thus, in the mouse, the qualitative behavioral effects of THC were similar to those previously reported for crude cannabis resin. Comparison of the dose response data indicated that some other constituents of cannabis may reduce the flight reaction from THC although not interfering with immobility.—*Journal abstract*.

11776. Dahlström, Bengt; Paalzow, Gudrum & Paalzow, Lennart. (U Uppsala, Pharmaceutical Faculty, Sweden) **A pharmacokinetic approach to morphine analgesia and its relation to regional turnover of rat brain catecholamines.** *Life Sciences*, 1975(Jul), Vol 17(1), 11-16.—Developed and tested a model which suggests that morphine induces its analgesic effect by a change of

activities in at least 2 neurophysiological systems. Data from male Sprague-Dawley rats suggest that 1 of these 2 systems could be dopaminergic, and that in this system, morphine increases the turnover of dopamine, probably by releasing this transmitter from limbic structures that initiate the effect of morphine on the threshold for vocalization afterdischarge (the emotional component of pain reactions).

11778. Ellison, Gaylord. (U California, Los Angeles) **Monoamine neurotoxins: Selective and delayed effects on behavior in colonies of laboratory rats.** *Brain Research*, 1976, Vol 103(1), 81-92.—Male hooded Long-Evans rats were raised in 2 colonies of 27 rats each, and then given intraventricular injections of 6-hydroxydopamine (6-OHDA) or 5,6-dihydroxytryptamine (5,6-DHT) or saline. Ss were then returned to their enclosure, and behavior during the next 50 days was observed. Shortly after injection, the 6-OHDA Ss spent more time in the burrows than controls and when out were inactive. The 5,6-DHT Ss in contrast spent more time in the open than controls, ran more in activity wheels, approached humans, and fought more. Fighting, mounting, and hoarding in the colony gradually increased for 25 days; during this time the status of the 6-OHDA Ss fell progressively whereas the 5,6-DHT Ss increased in dominance. Social behavior returned to more normal levels after 50 days. (22 ref)—*Journal abstract*.

11781. Gorelick, David A. & Bridger, Wagner H. (Albert Einstein Coll of Medicine, Yeshiva U) **Does increasing stress change the behavioral action of mescaline from disruption to facilitation?** *Psychopharmacologia*, 1975, Vol 44(3), 307-309.—Results in male Long-Evans rats that exposure to a stressor per se is not the crucial factor causing hallucinogens to have facilitatory effects on animal behavior. It is suggested that the facilitatory effect depends on the relation between the exposure and the conditioned task. (16 ref)

11782. Gottschalk, Louis A. (U California, Irvine) **Drug effects in the assessment of affective states in man.** In W. B. Essman & L. Valzelli (Eds), *Current developments in psychopharmacology: 1*. Holliswood, NY: Spectrum, 1975. 345 p.—Reviews methodological approaches to the measurement of affects and their changes in neuropsychopharmacology. Definitions are given of psychological states traits moods, affects, emotions, affective disorders, and related topics. A review of the reliability of self-reports, behavioral rating scales by independent observers, and content analysis scales of verbal behavior is presented. (6 p ref)

11783. Goudie, A. J.; Taylor, M. & Atherton, Helen. (U Liverpool, England) **Effects of prior drug experience**

on the establishment of taste aversions in rats. *Pharmacology Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 947-952.—56 food- and water-deprived male Wistar albino rats were injected ip with either 2 mg/kg dextroamphetamine, 9 mg/kg dl-fenfluramine, or isotonic saline immediately after the 1st presentation of a 25% solution of condensed milk for a 30-min period. When Ss were tested for aversion to condensed milk 8 days later, both drugs caused a highly significant decrease in total amounts drunk; in contrast saline-injected Ss showed significant increases in the amount drunk. It was found that the development of a conditioned taste aversion could be markedly attenuated or abolished altogether by providing Ss with experience of both drugs prior to aversion establishment, and that the degree of attenuation of aversion was proportional to the amount of prior experience. Novelty of drug administered would seem to be a critical variable in the establishment of taste aversions. Results are discussed with reference to some of the paradoxical aspects of drug-induced taste aversions. (26 ref)—*Journal abstract*.

11784. Greenberg, Isaac; Kuhn, Don & Appel, James B. (U South Carolina, Columbia) **Comparison of the discriminative stimulus properties of Δ^9 -THC and psilocybin in rats.** *Pharmacology Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 931-934.—10 male Sprague-Dawley albino rats were trained to respond differentially on the left or right lever in a 2-lever chamber on the basis of which drug had been given ip 30 min before experimentation. In 1 group 1.0 mg/kg of Δ^9 -tetrahydrocannabinol (THC) and control injections (vehicle) served as the discriminative stimuli associated with each lever, and in another group the drug stimuli were 1.0 mg/kg of THC and 1.0 mg/kg of psilocybin. Results confirm those of other experiments using different procedures: that THC can acquire discriminative control over responding. The fact that THC and psilocybin were also found to differentially control lever choice demonstrates that these 2 drugs probably produce discriminably different states in rats. (19 ref)—*Journal abstract*.

11785. Hatton, Daniel C.; Woodruff, Michael L. & Meyer, Merle E. (U Florida) **Cholinergic modulation of tonic immobility in the rabbit (*Oryctolagus cuniculus*).** *Journal of Comparative & Physiological Psychology*, 1975(Nov), Vol 89(9), 1053-1060.—Conducted a study with 13 adult Dutch Belt rabbits to determine the effects of the anticholinergic agent scopolamine and the cholinergic agent physostigmine on tonic immobility in rabbits. Recordings of the EEG activity from cortex and hippocampus were also made before, during, and after each test session. Scopolamine significantly prolonged the response and produced large amplitude slow wave activity in the EEG of both cortex and hippocampus. Physostigmine significantly shortened the duration of the immobility and increased rhythmic slow activity in the frequency range of 5.5-9.1 Hz in the hippocampus while producing a desynchronized cortical rhythm. It is suggested that the cortex and hippocampus play a role in the modulating tonic immobility duration by inhibiting the brain-stem structures thought to control this response. —*Journal abstract*.

11786. Henriksson, Bengt G.; Johansson, Jan O. & Järbe, Torbjörn U. (U Uppsala, Sweden) **Δ^9 -tetrahydro-**

cannabinol produced discrimination in pigeons. *Pharmacology Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 771-774.—In an operant situation 2 male pigeons learned to peck one response key 90 min after an injection of 0.25 mg/kg Δ^9 -tetrahydrocannabinol (THC) and another key when trained nondrugged. When tested with doses of THC lower than the training dose, the Ss discriminated 0.20 mg/kg of the drug from the nondrugged state but not 0.15 mg/kg or lower doses. The Ss were able to discriminate the drug state from the nondrugged 180 min but not 360 min after the injection. At a shorter interval (45 min) both drug and nondrug responding appeared. Cannabinol and cannabidiol (4.0-8.0 mg/kg) did not elicit any drug responses, nor did pentobarbital, ditran, or amphetamine. Tests with LSD resulted in both drug and nondrug responding. When administering noncannabinoid drugs in combination with THC 0.15 mg/kg the Ss responded at the key associated with the drug state, suggesting interactional effects. (16 ref)—*Journal abstract*.

11787. Hooghe-Peters, Elisabeth L. [Autoradiographic study of proline incorporation into cerebral proteins: The influence of learning and of asparaginase administration.] (Fren) *Acta Neurologica Belgica*, 1975(May-Aug), Vol 75(3-4), 143-150.—Distribution of labeled proteins in the mouse brain after injection of tritiated proline into the 3rd ventricle was studied after autoradiography. In discrete areas, incorporation proceeded faster after avoidance training. Differences between trained and resting Ss was more marked after injection of 100 units of levo-asparaginase, which may impair long-term memory by inhibiting protein synthesis.

11788. Hoover, Dorothea M. & Diamond, Marian C. (U California, Berkeley) **The effects of norethynodrel on the visual cortex of rats exposed to differential environments: A preliminary study of electrolytes and water.** *Brain Research*, 1976, Vol 103(1), 139-142.—Examined the effects of enriched environmental conditions (EC) and impoverished environmental conditions (IC) on visual cortical electrolytes and water in female, 60-day-old littermate rats receiving subcutaneous injections (0.2 mg/kg/day) of norethynodrel (the progestation component of Enovid) for 30 days and on controls receiving vehicle injections only. EC controls had greater Na concentrations than IC controls. Norethynodrel-treated Ss in the EC had significantly less Na, possibly less Cl, and a trend towards higher K concentrations than the EC controls. Treated EC Ss also had areas of thinner cortex: one area in the somatosensory cortex and one in the anterior visual cortex were significantly thinner, while the other 15 areas measured showed similar trends. Experimental and control Ss in the IC condition did not differ significantly. Results suggest that norethynodrel dampens CNS excitability preventing response to environmental enrichment and resulting in decreased cortical growth. (20 ref)—*S. Knapp*.

11789. Hughes, R.N.; Blampied, N. M. & Stewart, W. J. (U Canterbury, Christchurch, New Zealand) **Scopolamine induced changes in activity and reactions to novelty.** *Pharmacology Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 731-734. Observed the behavior of 48 male hooded rats in an exploration box comprising novel and familiar halves following ip

injections of 0.1, 0.25, 0.5, 0.75, or 1.00 mg/kg scopolamine or isotonic saline. Drug administration occurred after, rather than before, exposure to one of the alternative halves. All doses decreased reactions to the previously inaccessible novel half, but decreases were greater for the 2 lowest doses. Rearing behavior was also suppressed by each dose, whereas the number of apparatus cells entered (locomotion) was decreased by low doses but increased by high. The 3 behavioral measures showed declines in frequency during the course of each experimental session. However, low doses of the drug enhanced and high doses retarded these declines for rearing and cells entered. The study illustrates the difficulty in explaining data by unitary processes (such as attenuated habituation) when several behavioral indices and drug doses are employed within a single investigation. (31 ref)—*Journal abstract*.

11790. Kiessling, Marika; Lindl, Toni & Cramer, Hinrich. (Albert-Ludwigs-U Freiburg, Neurologische Klinik, W Germany) [Cyclic adenosine monophosphate in cerebrospinal fluid: Effects of theophylline, L-Dopa and a dopamine receptor stimulant in rats.] (Germ) *Archiv für Psychiatrie und Nervenkrankheiten*, 1975, Vol 220(4), 325-333.—Studied the effects of levodopa and the dopamine receptor stimulant ET-495 on cisternal cyclic adenosine monophosphate (cAMP) levels in male SIF-50 rats. Levodopa (100-200 mg/kg ip) increased cisternal cAMP levels by 60-80% of controls. When peripheral DOPA-decarboxylase was inhibited, smaller doses of levodopa were effective. Flac-63, an inhibitor of dopamine- β -hydroxylase, lowered the increase induced by L-Dopa which was completely suppressed by propranolol, not by phentolamine, suggesting that the cAMP increase is mediated through a central β -adrenoceptor stimulation. ET-495 failed to influence cAMP levels, which argues against a dopamine-sensitive adenylate cyclase involved in the levodopa effect. Moreover, large increases of cisternal cAMP were observed after treatment with theophylline, not papaverine, which suggests different effects of these phosphodiesterase inhibitors on the cAMP systems in the CNS or on transport mechanisms. (German summary) (26 ref)—*English abstract*.

11791. Larkin, Ronald P. (Rockefeller U, New York, NY) Effect of ventromedial hypothalamic procaine injections on feeding, lever pressing, and other behavior in rats. *Journal of Comparative & Physiological Psychology*, 1975(Nov), Vol 89(9), 1100-1108. Administered to 6 virgin female albino Wistar rats bilateral injections of 1-2 μ l procaine HCl solution (50 μ g μ l) in the region of the ventromedial hypothalamus. Normalized meals occurred reliably with a latency of 16-120 sec, indicating that this region has the function of inhibiting onset of eating, not just the function of stopping a meal. Food-rewarded fixed-ratio-of-1 (FR 1; continuous reinforcement) leverpressing was elicited by 2- μ l but not by 1- μ l procaine. The FR 64 pressing appeared to be disrupted during a period of increased activity following procaine injection, although visual observations indicated that the pressing which did occur was normal in topography and was significantly associated in temporal sequence with approaches of the food magazine. (35 ref)—*Journal abstract*.

11792. Lenard, Lane G. & Beer, Bernard. (Squibb Inst for Medical Research, Princeton, NJ) Modification of avoidance behavior 6-hydroxydopamine-treated rats by stimulation of central noradrenergic and dopaminergic receptors. *Pharmacology, Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 887-893.—Male Sprague-Dawley rats showing reliable decrements in conditioned avoidance behavior after the intraventricular administration of 6-hydroxydopamine (6-OHDA) with pargyline pretreatment were given various dopaminergic and noradrenergic agonists. Intraventricular injections of dopamine or levonorepinephrine or intraperitoneal injections of apomorphine or levodopa reversed the avoidance decrements, often restoring performance to pre-6-OHDA treatment levels. Furthermore, these agonists all produced behavior characteristics of activity in dopaminergic neurons. Clonidine, a noradrenergic agonist, also reversed avoidance decrements but did not produce behavior characteristic of stimulation of dopaminergic neurons in the brain. Pretreatment with spiroperidol, a dopaminergic receptor blocker, prevented the recovery induced by all agonists, although clonidine-induced recovery was affected least. Results are discussed in terms of possible separate roles for dopaminergic and noradrenergic neurons in the brain in avoidance behavior. (32 ref)—*Journal abstract*.

11793. Lenard, Lane G. & Beer, Bernard. (Squibb Inst for Medical Research, Princeton, NJ) 6-hydroxydopamine and avoidance: Possible role of response suppression. *Pharmacology, Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 873-878.—The intraventricular administration of 6-hydroxydopamine (6-OHDA) to 12 male Sprague-Dawley rats pretreated with pargyline resulted in severe, long-lasting decreases in avoidance responding with little or no effect on escape responding. Despite the fact that the Ss failed to avoid, they appeared to be able to discriminate the CS, as was evident from freezing behavior and other symptoms of an apparent fear reaction during the CS. The increase in freezing, a response that was incompatible with avoidance was seen during the first few test sessions after 6-OHDA treatment and seemed to be largely responsible for a gradual decline in avoidance responding during this same period. The role of catecholamine depletion in the animal's response to aversive stimuli thus appears to be a significant aspect of the avoidance decrement that follows 6-OHDA administration. (22 ref)—*Journal abstract*.

11794. Lenard, Lane G. & Beer, Bernard. (Squibb Inst for Medical Research, Princeton, NJ) Relationship of brain levels of norepinephrine and dopamine to avoidance behavior in rats after intraventricular administration of 6-hydroxydopamine. *Pharmacology Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 895-899.—20 male Sprague-Dawley rats trained on a discriminated avoidance procedure showed long-term decrements in performance after intraventricular administration of 6-hydroxydopamine. Biochemical assay showed that dopamine levels were correlated with avoidance performance no matter when behavior was measured, but norepinephrine levels were most highly correlated with avoidance behavior at those times when suppression of responding appeared to be the major influence on responding. Data

are discussed in terms of possible separate roles for norepinephrine and dopamine in avoidance behavior. (16 ref)—*Journal abstract*.

11795. Leonard, B. E. & Rigter, H. (Scientific Development Group Organon, Oss, Netherlands) **Changes in brain monoamine metabolism and carbon dioxide induced amnesia in the rat.** *Pharmacology Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 775-780.—Exp I studied the effect of treatment with carbon dioxide (CO₂) on the performance of 40 male Wistar rats 24 hrs after receiving a footshock in a passive avoidance task. Footshock induced avoidance. CO₂ produced retrograde amnesia for the footshock-induced avoidance response. Changes in brain monoamine metabolism were studied in Exp II in 80 Ss which had been treated with CO₂, footshock, or footshock plus CO₂. The Ss were killed 24 hrs after treatment. Changes mainly occurred in the brain stem and hippocampus. In Ss which had received footshock alone, brain stem and hippocampal serotonin concentrations were raised. This rise was not observed when the footshock was followed by CO₂. There was an increased release of noradrenaline in those Ss subjected to footshock alone but a decreased release of this amine in the group which received footshock followed by CO₂. It is suggested that the amnesic effect of CO₂ parallels changes in brain serotonin and noradrenaline metabolism. (34 ref)—*Journal abstract*.

11796. Martin, Billy R. et al. (Virginia Commonwealth U) **Marihuana-like activity of new synthetic tetrahydrocannabinols.** *Pharmacology, Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 849-853.—11-Methyl- δ^8 -, 9-nor- δ^8 -, and 9-nor- δ^8 -tetrahydrocannabinol (THC), newly synthesized cannabinoids which are not 11-hydroxylated in vivo, were tested for cannabinoid activity. δ^8 -, δ^8 -THC, and each synthetic analog produced static ataxia in unanesthetized dogs, hypotension and bradycardia in anesthetized dogs, and decreased spontaneous activity in Swiss-Webster albino mice. All synthetic analogs tested produced a greater degree of tolerance to the behavioral effect in dogs than did δ^8 -THC. 11-Methyl- δ^8 -THC was more effective than δ^8 -THC in decreasing spontaneous activity in mice, but was less active in producing the behavioral and cardiovascular effects in dogs. 9-nor- δ^8 -THC was less active than δ^8 -THC, but 9-nor- δ^8 -THC was as active as δ^8 -THC in all observations. Results suggest that the 11-hydroxy metabolites of δ^8 - and δ^8 -THC are not solely responsible for the biological activity of tetrahydrocannabinols. (21 ref)—*Journal abstract*.

11797. Maruyama, Yuji; Sawa, Aiko & Hosoya, Eikichi. (Keio U, Medical School, Tokyo, Japan) **A simple method for the determination of dependence-producing drugs by gas chromatography.** *Bulletin on Narcotics*, 1975(Apr-Jun), Vol 27(2), 37-45.—Describes a simple procedure for extracting several dependence-producing drugs from urine, and a simple accurate method for detecting these drugs. In tests with Wistar rats, combined procedures made it possible to detect as little as .01 μ g of an unknown compound. (16 ref)—A. S. Kulkarni.

11798. Montgomery, R. B. & Singer, G. (La Trobe U, Bundoora, Australia) **Functional relationship of lateral hypothalamus and amygdala in control of eating.**

Pharmacology Biochemistry & Behavior, 1975(Sep-Oct), Vol 3(5), 905-907.—Seven cannulated male Wistar albino rats were injected with combinations of noradrenaline, phenoxybenzamine, tolazoline, or placebo under 6 treatment conditions, while food- and water-satiated. The elicitation of increased food intake in the satiated S by adrenergic stimulation of the lateral hypothalamus was confirmed, and it was further found that simultaneous adrenergic stimulation of the amygdaloid cortical nucleus augmented this increase. Simultaneous antiadrenergic blockade in the amygdaloid cortical nucleus reduced eating to control level. The lack of response of the amygdaloid cortical nucleus to adrenergic stimulation in the satiated S, under simultaneous stimulation of the lateral hypothalamus with either placebo or an adrenergic blocker, was also demonstrated. It is concluded that the amygdaloid cortical nucleus has a modulatory influence on eating behavior which is dependent on the level of activity in the lateral hypothalamus, and further that this modulatory influence is necessary to the behavioral output of the hypothalamic system. Results are seen as supporting the behavioral generality of the functional relationships reported. *Journal abstract*.

11799. Monti, Jaime M. & Ruiz, Marta. (Escola Paulista de Medicina, São Paulo, Brazil) **Increased disrupting effects of haloperidol on a conditioned avoidance response after 6-hydroxydopamine treatment.** *Pharmacology Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 943-945. Studied the influence of prior catecholamine depletion on the behavioral depressant effects of the butyrophenone derivative, haloperidol. 12 groups of 5 male Wistar albino rats each were trained to 100% conditioned avoidance and were tested with either 75 or 150 μ g/kg ip haloperidol. Ss then received either intraventricular 6-hydroxydopamine (6-OHDA) lesions of both noradrenergic and dopaminergic systems, or were sham lesioned. Results of retesting the Ss on the conditioner avoidance response show that the butyrophenone disrupting effects on avoidance behavior were significantly increased by 6-OHDA pretreatment. Findings support present hypotheses relating haloperidol's actions on the CNS to an inhibition of the catecholaminergic system.—B. McLean.

11800. Mucha, R. F.; Pinel, John P. & Van Oot, P. H. (U British Columbia, Vancouver, Canada) **Simple method for producing an alcohol withdrawal syndrome in rats.** *Pharmacology Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 765-769. 26 implanted male black-hooded rats received intragastric intubations of ethanol at 8-hr intervals for 0, 7, 15, or 30 days. The dosage for each S was one which produced observable signs of intoxication 1 hr after the intubation. All of the Ss in the experimental groups developed a tolerance to ethanol as indicated by the increasing dose required to induce intoxication, but the degree of tolerance was related to the duration of the ethanol administration. During the withdrawal period the incidence of hyper-reactivity, convulsive symptoms, and the susceptibility to audiogenic seizures was determined for all 4 groups. Although every experimental S displayed withdrawal symptoms, the incidence of these symptoms was an increasing, negatively accelerated function of the duration of ethanol exposure. For situations where voluntary

consumption of alcohol is not necessary this method is a simple, controlled, reliable way of inducing ethanol tolerance and physical dependence in rats. (18 ref) —*Journal abstract.*

11801. Pichot, Pierre. (U Paris, Clinique des Maladies mentales et de l'Encéphale, France) [Methodology of therapeutic trials in psychopharmacology.] (Germ) *Archiv für Psychiatrie und Nervenkrankheiten*, 1975, Vol 220(4), 281-288.—Discusses general aspects of therapeutic trials in psychopharmacology under 3 main headings: definition of the concepts of disease, treatment, and healing. In each case, the main difficulties are examined, and concrete examples are given. The complexity of the methodologic problems is stressed, but it is considered that the cost of using correct experimental designs is more than balanced by the safety of the statistical conclusions.—*English abstract.*

11802. Pieper, W. A. & Skeen, Marianne J. (Georgia State U) Retention of functional tolerance to ethanol in rhesus monkeys (*Macaca mulatta*). *Pharmacology Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 909-913.—Tolerance to ethanol (3 g/kg 90 min prior to testing) was assessed in a group of 4 monkeys in which tolerance development had been observed using the same behavioral task 1 yr prior to the present study. Although some decrements in performance on a 2-choice discrimination-reversal learning task were observed, these changes were transient and statistically insignificant. Results indicate that functional tolerance persisted throughout a 1 yr abstinence period.—*Journal abstract.*

11803. Plotnik, Rod; Mollenauer, Sandra; Gore, William & Popov, Alex. (San Diego State U) Comparing the effects of scopolamine on operant and aggressive responses in squirrel monkeys. *Pharmacology Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 739-748.—Exp I with 3 male squirrel monkeys confirmed the fact that scopolamine causes disinhibition or an increase in responses that an animal normally suppresses. Exp II explored the implications of drug-produced disinhibition on aggressive interactions in 4 additional males. In Exp I scopolamine produced increased unreinforced responding on a DRI schedule and increased responding during unreinforced periods. In contrast, the peripheral control drug, methyl scopolamine, caused decreased responding in both situations. In Exp II social rank and drug treatment interacted. When space was restricted so that the opportunity for social interactions was maximized, scopolamine consistently increased aggressiveness in the dominant S and decreased aggressiveness in a submissive S. When space was increased so that the opportunity for social interactions was minimized, scopolamine caused decreased aggressive responses in all Ss. Neither the effective dosage nor the drug's effect on the operant task could be easily generalized to aggressive responses. (17 ref) —*Journal abstract.*

11804. Poignant, J. C. et al. (Inst Recherches Servier, Suresnes, France) A new central direct dopaminergic stimulant: 1-(Coumaran-5-yl methyl)-4-(2-thiazolyl) piperazine hydrochloride (S-3608). *Experientia*, 1975, Vol 31(10), 1204-1205.—The new compound S-3608 has been found to be a neuropharmacological agent which can activate central dopaminergic receptors in the rat. Data support the conclusion that S-3608 has different

effects than apomorphine. It is similar to Piribedil in action, but does not have the same cardiovascular effects. (French summary)—*J. L. Andreassi.*

11805. Reich, Michael J. (Iowa State U) Effects of carbachol induced drinking on conditioned saccharin aversions in rats. *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5229-5230.

11806. Reischl, Peter. (Iowa State U) Auditory detection behavior in parathion treated squirrel monkeys. *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5046.

11807. Rigter, H.; Van Eys, G. & Leonard, B. E. (Scientific Development Group Organon, Oss, Netherlands) Hippocampal monoamine metabolism and the CO₂ induced retrograde amnesia gradient in rats. *Pharmacology Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 781-785.—In Exp I a gradient of retrograde amnesia for a passive avoidance response could be established when carbon dioxide (CO₂) was used as the amnesic agent in 80 male Wistar rats. The extent of passive avoidance increased as the period between application of a mild footshock and CO₂ treatment was increased. The amnesia gradient covered a period of at least 60 min. In Exp II with 80 additional Ss, changes in hippocampal serotonin metabolism paralleled the amnesia gradient. Thus, the concentration of serotonin increased as the interval between footshock and CO₂ treatment increased. The changes in hippocampal noradrenaline and dopamine did not correlate with the amnesia gradient. (24 ref)—*Journal abstract.*

11808. Ross, Svante B. & Renyi, Anna L. (Astra Läkemedel AB, Research & Development Lab, Södertälje, Sweden) Tricyclic antidepressant agents: II. Effect of oral administration on the uptake of ³H-noradrenaline and ³H-5-hydroxytryptamine in slices of the midbrain-hypothalamus region of the rat. *Acta Pharmacologica et Toxicologica*, 1975(May), Vol 36(5), 395-408.—Determined the inhibition of the simultaneous uptake of ³H-1-noradrenaline (NA) and ³H-5-hydroxytryptamine (5-HT) in slices of the midbrain-hypothalamus region of male Sprague-Dawley rat brains after oral administration of desipramine, imipramine, nortriptyline, amitriptyline, chloridesipramine, and chlorimipramine. All compounds were more active in inhibiting the NA uptake than the 5-HT uptake. This difference was very marked for desipramine, imipramine, nortriptyline, and chloridesipramine. Chlorimipramine was almost as active on the 5-HT uptake as on the NA uptake, and amitriptyline had low activity on both uptake mechanisms. Desipramine and imipramine were the most active compounds on the NA uptake, and the duration of the action was very long. The role of the biotransformation for the inhibitory activities of imipramine, chlorimipramine, and amitriptyline was investigated in Ss pretreated with SKF-525-A. The inhibitory potency of imipramine was increased by the same factor for both uptake mechanisms, probably due to the large increase in the concentration of imipramine in the brain which was demonstrated after the administration of ³H-imipramine. The inhibitory activity of chlorimipramine was somewhat more increased for the 5-HT uptake than for the NA uptake. The low activity of amitriptyline seems to be mainly due to poor reorption, since pretreatment

of the Ss with SKF-525-A only slightly increased the potency, whereas intraperitoneal injection of amitriptyline had a rather marked effect on the NA uptake. (16 ref)—*Journal abstract*.

11809. **Rush, John & Mendels, J.** (VA Hosp, Philadelphia, PA) **Effects of lithium chloride on muricidal behavior in rats.** *Pharmacology Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 795-797.—Lithium chloride at 2 different doses (1 mEq/kg and 2 mEq/kg ip twice a day for 10 days failed to inhibit muricidal behavior in 18 male Sprague-Dawley rats. Lithium chloride at the higher dose caused neurotoxicity in 6 of 11 Ss as measured by the rotorod. These dosages generated serum levels of 0.70 and 1.00 mEq/L respectively. The same behavior was blocked by imipramine HCl at 8.5 mg/kg 45 min following a single ip injection without evidence of neurotoxicity by the rotorod method. Results indicate that lithium chloride is unlike the tricyclic agents in the muricide test. Therefore, if its clinical antidepressant activity is substantial, it may be most effective in a neurochemically different class of depressives than the tricyclics. (25 ref)—*Journal abstract*.

11810. **Segal, David S.; Callaghan, Maureen & Mandell, Arnold J.** (U California, Medical School, San Diego) **Alterations in behaviour and catecholamine biosynthesis induced by lithium.** *Nature*, 1975(Mar), Vol 254(5495), 58-59.—Studied the behavioral and neurological correlates of long-term administration of Li to male rats (Carworth Farms), and found that Li suppressed both spontaneous and amphetamine-induced behavior, that tolerance developed to this suppression, and that the emergence of tolerance was associated with increased tyrosine hydroxylase activity in the substantia nigra and caudate-putamen of the Ss. Findings are related to those of other studies, and the clinical and theoretical implications are briefly discussed. (35 ref)—*I. Davis*.

11811. **Singer, G.; Armstrong, S. & Wayner, M. J.** (LaTrobe U, Bundoora, Australia) **Effects of norepinephrine applied to the lateral hypothalamus on schedule induced polydipsia.** *Pharmacology, Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 869-872.—11 male Wistar rats, bilaterally cannulated in the lateral hypothalamus, were administered 3 doses of norepinephrine (NE) under conditions of 80% body weight reduction (prepolydipsia), 80% body weight reduction (schedule induced polydipsia), and normal body weight (postpolydipsia). The only significant reduction in water intake occurred with the highest dose of NE under the prepolydipsic condition. The fact that NE failed to block schedule induced polydipsia indicates that this behavior is regulated by a different biochemical system than that of deprivation induced drinking. (17 ref)—*Journal abstract*.

11812. **Smith, James B. & Clark, Fogle C.** (Worcester Foundation for Experimental Biology, Shrewsbury, MA) **Effects of d-amphetamine, chlorpromazine, and chlor-diazepoxide on intercurrent behavior during spaced-responding schedules.** *Journal of the Experimental Analysis of Behavior*, 1975(Sep), Vol 24(2), 241-248.—Compared the effects of dextroamphetamine, chlorpromazine, and chlordiazepoxide on leverpressing under direct control of spaced-responding schedules with effects on intercurrent drinking and wheel running in 3

male Wistar rats. Drug effects on leverpressing were systematically related to dose and were consistent for all Ss; drug effects on intercurrent behavior were generally different for each S. In the case of leverpresses, increasing doses of dextroamphetamine first increased and then decreased response rate, increasing doses of chlorpromazine produced graded decreases in response rate, and doses of chlordiazepoxide up to 40 mg/kg produced no effect on response rate. Data are discussed in context with the concept of schedule control, and it is suggested that the behavioral pharmacology of intercurrent behavior be explored as a useful procedure in the experimental analysis of intercurrent behavior. (30 ref)—*Journal abstract*.

11813. **Speciale, S. G. & Friedman, A. H.** (U Claude-Bernard, Lyon, France) **Gamma-butyrolactone sleep: A 24-hr rhythm paralleling normal sleep in the rat and CNS amine changes.** *Pharmacology Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 761-764.—The duration of sleep induced by a fixed dose of gamma-butyrolactone (GBL) (350 mg/kg, ip) followed the normal circadian sleep pattern of male Sprague-Dawley albino rats. GBL sleep duration was maximal at 1800 hrs and minimal at 0600 hrs. CNS amine changes were not extensive, but when normal sleep was anticipated, GBL treatment increased dopamine and serotonin levels and decreased norepinephrine levels. (27 ref)—*Journal abstract*.

11814. **Spissu, Alfonso et al.** (Clinica delle Malattie nervose e mentali, Cagliari, Italy) **Treatment of Sydenham's chorea with a combination of L-Dopa and a peripheral Dopa decarboxylase inhibitor.** *Psychopharmacologia*, 1975, Vol 44(3), 311-312.—Treatment of 2 male patients (ages 13 and 18 yrs) with levodopa and MK-486 markedly reduced in one patient and totally suppressed in the other the abnormal involuntary movements present in Sydenham's chorea. The marked accumulation of spinal fluid homovanillic acid indicates that the treatment increased brain dopamine turnover.

11815. **Squire, Larry R. & Barondes, Samuel H.** (VA Hosp, San Diego, CA) **Amnesic effect of cycloheximide not due to depletion of a constitutive brain protein with short half-life.** *Brain Research*, 1976, Vol 103(1), 183-189.—Administered 120 mg/kg cycloheximide or 30 mg/kg anisomycin subcutaneously to mice and determined the extent of brain protein synthesis inhibition at various times. Additional male Swiss albino mice were then injected with the same dose of cycloheximide 1 or 5 min before shock-escape object discrimination training. Results suggest these drugs block the formation of long-term memory by inhibiting the synthesis of protein induced by the training rather than by causing the depletion of constitutive protein. (22 ref)

11816. **Stevens, John K. et al.** (U Pennsylvania, Medical School) **Paralysis of the awake human: Visual perceptions.** *Vision Research*, 1976(Jan), Vol 16(1), 93-98.—Administered subparalytic doses of curare to 3 of the authors as Ss. Four major perceptions were reported: (a) displacement or repositioning of the perceived visual world in the direction of a successfully executed eye movement, (b) jumping during a saccade, (c) movement associated with drift of the eye, and (d) increased effort associated with each eye movement.

Paralytic doses of succinylcholine were administered to a single observer. Three major perceptions were reported: (a) displacement in the direction of the intended eye movement without jumping, (b) a sensation that great effort was required to move the eye, and (c) fading of the visual image due to effective retinal stabilization. Similar visual perceptions were observed when the eye was paralyzed with a local anesthetic; however, no fading or sense of effort was reported. (29 ref)—*Journal abstract*.

11817. Stratton, Lois O. & Kastin, Abba J. (U New Orleans) **Increased acquisition of a complex appetitive task after MSH and MIF.** *Pharmacology Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 901-904.—After daily ip injections of melanocyte stimulating hormone (MSH), MSH-release inhibiting factor (MIF), or diluent, 21 male Sprague-Dawley albino rats ran a 12-choice Warden maze for a palatable food reward. Ss receiving the hormones had shorter latencies and made fewer errors than controls during learning, but unlike results with simple tasks, there were no differences during extinction. Results demonstrate that both MSH and MIF could facilitate the acquisition of an appetitive task which seemed of sufficient complexity to emphasize differences in performance. (16 ref)—*Journal abstract*.

11818. Vogel, John R. & Nathan, Beth A. (Wm. H. Rorer, Inc, Central Nervous System Section, Fort Washington, PA) **Learned taste aversions induced by high doses of monosodium l-glutamate.** *Pharmacology Biochemistry & Behavior*, 1975(Sep-Oct), Vol 3(5), 935-937.—Learned taste aversions, as measured by increased time to complete 100 licks of a sweetened condensed milk solution, were demonstrated by 51 male Holtzman rats 4 days after consumption of the milk solution paired with high oral doses of monosodium levoglutamate (MSG). The hesitancy of the Ss to consume milk on the test session cannot be simply attributed to direct action of the drug on motivation (e.g., hunger) or to drug debilitation. MSG has been reported to occasionally cause aversive effects in humans (Chinese restaurant syndrome), and the present experiments demonstrate that the effects of MSG are aversive to laboratory rats as well.—*Journal abstract*.

11819. Walker, James R. & Teas, Donald C. (U Texas Medical Branch, Galveston, TX) **The effect of small concentrations of sodium pentobarbital on auditory evoked responses.** *Journal of Auditory Research*, 1974(Jan), Vol 14(1), 73-81.—Used sodium pentobarbital (0.2-2.5 mg/kg) to selectively block a portion of the auditory evoked responses recorded from the inferior colliculus of guinea pigs. The responses of randomly selected units to a variety of acoustic stimuli (sine waves, noise, or clicks ranging from 12 to 84 db) were compared to detect specific changes produced by the barbiturate. The effect in variations of ipsilateral intensity while contralateral intensity was held constant were also considered. Since barbiturates have been reported to act principally on the cortex it was expected that the postbarbiturate histogram would reflect reduced inhibition of cortical origin. Results do not support this contention. Findings indicate that barbiturates at unex-

pectedly low blood concentrations act, at as yet unknown sites, to produce profound changes in the poststimulus histogram, perhaps with no detectable alteration of auditory perception.—*Journal summary*.

11820. Warburton, David M. (Reading U, London, England) **Brain, behaviour and drugs.** New York, NY: John Wiley & Sons, 1976. x, 280 p. \$18.50.—Presents an advanced textbook in psychopharmacology, which reflects the current trend toward explaining behavior in terms of the basic neurochemical systems of the brain. Among the topics discussed are the biochemical bases of mood, attention, sleep and dreams, schizophrenias, drug dependence, learning and memory, intelligence, and anxiety and stress.

11821. Weening, David L. (U Waterloo, Canada) **Pentylentetrazol-induced convulsions: Delayed development of retrograde amnesia.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5234-5235.

11822. Wilson, W. H. & Heller, H. C. (Stanford U) **Elevated blood glucose levels and satiety in the rat.** *Physiology & Behavior*, 1975(Aug), Vol 15(2), 137-143.—Placed 13 male albino Sprague-Dawley rats on a feeding schedule of 2-3-hr periods of food availability daily. Blood glucose levels of the experimental Ss were altered by ip injection of 8 ml of 2, 5, 8, 12, 16, 20 and 25% glucose solutions and by intragastric loading of 8 ml of 25, 50 and 65% glucose solutions in 10 different feeding experiments. In 4 additional experiments, experimental Ss received ip injections of 8 ml of 12, 16, 20 and 25% solutions of mannitol, a nonmetabolizable sugar-alcohol. Controls always received identical quantities of mammalian Ringer's solution. Another set of 20 Ss was used to determine glucose tolerance curves for each concentration of glucose and mannitol. No food intake depression occurred following ip injections of 2, 5, 8, and 12% glucose, 12% mannitol, and following intragastric loading of 25, 50, and 65% glucose. However, ip injections of 16, 20, and 25% glucose and mannitol caused depression of food intake. It is concluded that blood glucose level per se is not an important feedback parameter in the long-term control of food intake, and the depression in food intake following ip injections of 16, 20, and 25% glucose and mannitol solutions was due to an abnormal physiological condition. (22 ref)—*Journal abstract*.

11823. Winson, Jonathan. (Rockefeller U, New York, NY) **Hippocampal theta rhythm. I: Depth profiles in the curarized rat.** *Brain Research*, 1976, Vol 103(1), 57-70.—Reports that systemic injection of dextro-tubocurarine (2 mg/kg, ip) in 21 male Sprague-Dawley freely moving rats changed the depth profile of theta rhythm seen in the hippocampus. Under curare, dorsoventral microelectrode advancement revealed the presence of a sudden phase reversal and null occurring at the level of the stratum radiatum of CA₁. Further advancement revealed the presence of an amplitude peak in the vicinity of the hippocampal fissure. In addition to the change in depth profile, curare altered the relationship between the amplitudes of the 2 phase-reversed components of the theta rhythm. The change in theta rhythm brought about by curare outlasted the paralytic effect of the drug. (21 ref)—*Journal abstract*.

Language & Speech

11824. Ancona, L.; Croce, M. A. & Lisi, F. (U Cattolica del Sacro Cuoro, Inst di Psicologia, Milan, Italy) [Duration of the influence of a film on subjects of average to superior background.] (Ital) *Archivio di Psicologia Neurologia e Psichiatria*, 1975(Apr-Jun), Vol 36(2), 232-238.—90 university students 18-25 yrs old were administered the Rosenzweig Picture-Frustration Study, Buss-Durkee's Hostility-Guilt Inventory, and the McClelland n-Achievement scale 6 wks before seeing a film about the boss-servant game. After the film was shown and a general questionnaire was administered, the Ss were divided into 3 groups: Group 1 was readministered the test battery on the same day they saw the film, Group 2 the next day, and Group 3 a week later. With some variations, most effects decreased after a week, thus weakening the contention that violence in films may have lasting effects on masses.—L. L'Abate.

11825. Argyle, Michael & Cook, Mark. (Oxford U) *Gaze and mutual gaze*. New York, NY: Cambridge U Press, 1976. xi, 210 p. \$18.50.—Reviews and interprets research findings in the use of the eyes in social behavior. Among the topics discussed are gaze patterns in animals and their development in children, the link between gaze and speech, deviant patterns of gaze in psychiatric cases, cross-cultural differences, and gaze as a signal for interpersonal attitudes and emotions. (21 p ref)

11826. Cordova, Jose E. (U New Mexico) *Television viewing habits of selected special education and regular education children in five New Mexico school districts*. *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1527.

11827. Hartnagel, Timothy F.; Teevan, James L. & McIntyre, Jennie J. (U Alberta, Edmonton, Canada) *Television violence and violent behavior*. *Social Forces*, 1975(Dec), Vol 54(2), 341-351.—Tested the hypothesis that there is a positive relationship between exposure to television violence and violent behavior using questionnaire data obtained from approximately 2,100 7th-12th graders. Only minimal support for this hypothesis was found. It was also hypothesized that those adolescents who perceive violence on their favorite television show and those who perceive it as effective would report more violent behavior than adolescents who do not perceive their favorite show in these terms. This hypothesis was supported. Finally, television violence was included with other independent variables in a procedure to predict violent behavior. Television violence was insignificant in comparison to such other variables as sex and grade in school in predicting violent behavior. (31 ref)—*Journal abstract*.

11828. Hatch, Frank W. (U Wisconsin) *A behavioral cybernetic interpretation of dance and dance culture*. *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5237-5238.

11829. Rouff, Lenore L. (Bryn Mawr Coll) *The relation of personality and cognitive structure to humor appreciation*. *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5174-5175.

11830. Villani, Kathryn B. (U Pennsylvania) *Relationship between viewers' personality life style characteristics and their television viewing behavior*. *Dissertation*

11831. Denbow, Carl J. (Ohio U) *An experimental study of the effect of a repetition factor on the relationship between readability and listenability*. *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7798.

11832. Getsinger, Stephen H. (U Missouri, Columbia) *Ego strength and temporal behavior*. *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 6974.

11833. Giles, Howard & Powesland, Peter F. (U Bristol, England) *Speech style and social evaluation*. London, England: Academic Press, 1975. viii, 218 p. \$6.60(cloth), \$17(paper).—Investigates the social importance of the individual's speech style, discussing "linguistic norms" with reference to a variety of cultures and research sources. Endogenous and exogenous factors in speech style are discussed, and a tentative theory to explain speech modification is proposed.

11834. Gluck, Nancy E. (Columbia U) *Identification and correction of nonstandard English in written and oral modes of presentation*. *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5167.

11835. Harford, James R. (U Lancaster, England) *A child and the English question formation rule*. *Journal of Child Language*, 1975(Nov), Vol 2(2), 299-301.—Suggests that there may be 2 distinct ways of forming English interrogatives, in argument with the standard transformational analysis of English questions which states that all English questions are formed in the same way. Illustrations are given to support the notion.

11836. Hill, Sidney R. (U Florida) *A study of the effect of non-ability variables on the outcome of intercollegiate debates*. *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 7366.

11837. Ketai, Richard. (U Michigan Hosp, Neuropsychiatric Unit) *Affect, mood, emotion, and feeling: Semantic considerations*. *American Journal of Psychiatry*, 1975(Nov), Vol 132(11), 1215-1217.—Reviews the varying uses and definitions of words that describe emotional experience and expression. It is concluded that such words refer to distinct psychological phenomena, and it is suggested that they be used carefully to facilitate communication about emotions.

11838. Kibens, Majja. (U Michigan) *The Chomskyan paradigm and semantic creativity*. *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6701.

11839. King, Corwin P. (Pennsylvania State U) *A theoretical view of the function of memory in oral communication*. *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1773.

11840. Kozlowski, Lynn T. (Columbia U) *Similarity of affective meaning and the evaluation of metaphor*. *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 787-790.—Explored the role of similarity of affective meaning between the elements of metaphors (an X is a Y). Similarity was measured by 20 undergraduates' ratings of the metaphor elements on the Evaluation, Potency, and Activity factors of the semantic differential technique. To determine evaluation scores, 20 other Ss ranked the metaphors on a Q-sort task for goodness, vividness,

meaningfulness, strangeness, and interestingness. Only a positive linear relationship was found between similarity and evaluation. Similarity on Activity was most strongly related to the positive evaluation of the metaphors. —*Journal abstract.*

11841. Lowenhar, Jeffrey A. (Syracuse U) **Population planning appeals: The effect of source credibility and fear in terms of the cognitive consistency model.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5172.

11842. Marston, Alan D. (U Illinois) **The effect of American regional dialects upon speaker credibility and perceived personality.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 2), 6154-6155.

11843. McFarland, James C. (Northwestern U) **Dialogical communication and its relationship to self-actualization.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6784.

11844. Pietrinferno, Gail W. (Princeton U) **The development of speaker processes in referential communication: Message choice as a function of message adequacy.** *Dissertation Abstracts International*, 1974(Feb), Vol 34(8-B), 4094.

11845. Reinsch, Nelson L. (U Kansas) **Attitudinal effects of brief and extended similes and metaphors.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7914.

11846. Ryan, Michael G. (U Oklahoma) **The influence of speaker dialect and sex on persuasion, credibility, and stereotypic attribution.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1776.

11847. Silverman, Ellen-Marie. (Marquette U, Coll of Speech) **Effect of selected word attributes on preschoolers' speech disfluency: Initial phoneme and length.** *Journal of Speech & Hearing Research*, 1975(Sep), Vol 18(3), 430-434.—Conducted a study to determine whether preschool nonstutterers tend to be disfluent on words that begin with consonants or on words that begin with vowels and whether they tend to be disfluent on long or on short words. Analyses of the spontaneous speech of 10 4-yr-old boys sampled both in their nursery school classroom and in an interview situation indicated that initial phoneme exerted no influence on the distribution of their speech disfluencies. Word length, however, exerted an influence in the interview situation where Ss tended to be disfluent on monosyllabic words. The data raise questions with respect to the applicability of O. Bloodstein's (1974) model of the development of stuttering to the disfluency behavior of nonstutterers. (16 ref) —*Journal abstract.*

11848. Stice, Jeris W. (Florida State U) **Verbal aggression in State of the Union messages during wartime and non-wartime.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6786.

11849. Taubr, Paul R. (U Minnesota) **Code elaboration among Minneapolis sixth-grade children: Variation with interviewer.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 7215-7216.

11850. Taylor, Jon T. (Florida State U) **Three factors influencing the recall of self embedded English sentences.** *Dissertation Abstracts International*, 1974(May), Vol 34(9-A, Pt 2), 5950-5951.

11851. Ullmann, W. Richard. (U Southern California) **Susceptibility to persuasive communication following change produced by counterattitudinal encoding and decoding.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 7370-7371.

11852. Wilcox, Ethel M. (Bowling Green State U) **Socio-economic factors of counterattitudinal advocacy.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 7372.

11853. Zechmeister, Eugene B.; King, Joseph; Gude, Chris & Opera-Nadi, Bernadette. (Loyola U, Chicago) **Ratings of frequency, familiarity, orthographic distinctiveness and pronunciability for 192 surnames.** *Behavior Research Methods & Instrumentation*, 1975(Nov), Vol 7(6), 531-533.—Obtained ratings from 703 undergraduates for a sample of 192 surnames selected randomly from a large metropolitan area phone book. Measures of reliability and the intercorrelations among the various measures indicate that the present information may be useful for investigations of learning and remembering names. While certain unique aspects of name stimuli may have important advantages for researchers of verbal processes, the present ratings should also prove useful to personality and social psychologists when names are of interest.—*Journal abstract.*

Literature & Art

11854. Bellon, Elnor C. (U Tennessee) **A content analysis of children's books set in the South.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 6936-6937.

11855. Diamond, Ruth. **The archetype of death and renewal in *I Never Promised You a Rose Garden*.** *Perspectives in Psychiatric Care*, 1975(Jan-Mar), Vol 8(1), 21-24.—Compares insanity and recovery from it, as depicted in H. Green's book about a young woman schizophrenic, with death and rebirth. Similar experiences are reported as taking place during the initiation rituals undergone by shamans, and death and resurrection form part of many of mankind's oldest myths. The narrative is discussed in terms of these parallels and of Jung's archetypes of the unconscious and the search for the Self. The heroine's completion of her journey into "Hades" and her emergence into the real world indicates the presence of powerful forces in the human psyche leading toward renewal and individuation.—*M. L. Hogan.*

11856. Gentry, W. Doyle. (Duke U Medical Ctr) **Aggression in fairy tales: Comparison of three cultures.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 895-898.—Estimated the extent of aggressive content in 6 fairy tales from each of 3 cultures: American, Japanese, and middle-eastern Indian. Aggression, primarily of a physical type, was widespread throughout the selected tales from all 3 cultures. However, the Grimm's tales, utilized in the American culture, evidenced the greatest amount of manifest aggression by a ratio of 4:2:1 over the Indian and Japanese cultures. The Grimm's tales also depicted significantly more human, as opposed to fictional, aggression. Further study of the relationship between exposure to this form of mediated experience and aggressive behavior in children of the different cultures is suggested.—*Journal abstract*

11857. Glenn, Jules. (State U New York, Downstate Medical Ctr, Brooklyn) **The adoption theme in Edward Albee's *Tiny Alice* and *The American Dream*. *Psychoanalytic Study of the Child*, 1974, Vol 29, 413-429.**—Argues that adoption influences personality development and that artists who have themselves been adopted often reveal their fantasies in their creative products. Two Albee plays are examined and presented as support for this argument. (32 ref)

11858. McDonald, Marjorie. (Private practice, Cleveland, OH) ***Little Black Sambo*. *Psychoanalytic Study of the Child*, 1974, Vol 29, 511-528.**—Presents a psychological analysis of the children's tale and discusses the view held by many Blacks that the story is a prime example of racism in children's literature. It is argued that "there is little overt racism in the story." *Epaminodas*, another children's fairy tale, is also discussed and interpreted as racist.

11859. Nelson, Robert L. (Michigan State U) **Responses of sixth-grade students to two types of humor present in fiction for children, and an investigation of the types of humor found in books for the middle grade reader. *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1534-1535.**

11860. Reynolds, Gordon D. (U California, Irvine) **Psychological rebirth in selected works by Nathaniel Hawthorne, Stephen Crane, Henry James, William Faulkner, and Ralph Ellison. *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7719.**

11861. Saklofske, D. H. (U Otago, Dunedin, New Zealand) **Visual aesthetic complexity, attractiveness and diversive exploration. *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 813-814.**—60 female student nurses individually rated 15 paintings of human figures for attractiveness, complexity, and interest. Analysis of ratings showed a significant inverted U-shaped relationship between attractiveness and complexity. Rated interest tended to increase with complexity. Ss most often selected and least often rejected for viewing paintings rated highly attractive and moderately complex.—*Journal abstract*.

DEVELOPMENTAL PSYCHOLOGY

11862. Brannigan, Gary G. (U Delaware) **The interaction of personality and social factors in children's discrimination learning. *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5183.**

11863. Broman, Sarah H.; Nichols, Paul L. & Kennedy, Wallace A. **Preschool IQ: Prenatal and early developmental correlates. Hillsdale, NJ: Lawrence Erlbaum, 1975. ix, 326 p.**

11864. Brown, Donald J. (U Iowa) **A comparison of five Piagetian-type tasks under two modes of presentation. *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1519-1520.**

11865. Busch, Fred. (U Michigan, Medical Ctr) **Dimensions of the first transitional object. *Psychoanalytic Study of the Child*, 1974, Vol 29, 215-229.** Discusses the child's development of a 1st transitional object and summarizes criteria that distinguish it from other objects of attachment. Its function is examined. A distinction is

made between transitional phenomena and the 1st transitional object; the former is seen as superficially similar to but qualitatively different from the latter. (18 ref)

11866. Clayton, Vivian. (U Southern California, Ethel Percy Andrus Gerontology Ctr) **Erikson's theory of human development as it applies to the aged: Wisdom as contradictory cognition. *Human Development*, 1975, Vol 18(1-2), 119-128.**—Discusses E. Erikson's (1950) theory of human development with particular emphasis on the feasibility of attaining the 8th stage, wisdom. The question is raised as to whether most elderly individuals resolve the last major crisis involving integrity and despair, and emerge with the concomitant virtue of wisdom. After examining the basic tenets of Erikson's model and relating it to other organismic theories of development, it is concluded that most individuals either seek foreclosure or enter prolonged moratoriums after adolescence, never reaching the last stage of the life cycle. Therefore, compromise rather than complete resolution between conflicting forces at each major life crisis seems the common and most realistic, though insufficient, approach for attainment of the last stage of development. (19 ref)—*Journal abstract*.

11867. Craig, James L. (U New Mexico) **Deprivation or intimidation: A study of social influences on children's verbality. *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1550.**

11868. DeMille, Richard. **Put your mother on the ceiling: Children's imagination games. New York, NY: Viking Press, xvi, 175 p. \$2.25.**—Vigorously defends the imaginative mental processes, and describes a number of games that can be used by parents or teachers to stimulate a child's imagination. Specific directions are given for conducting the games and for making sure that the child discriminates between his imaginative ideas and the world of reality.

11869. Drevensedt, Jean. (Ohio U) **Perceptions of onsets of young adulthood, middle age, and old age. *Journal of Gerontology*, 1976(Jan), Vol 31(1), 53-57.**—Asked undergraduates and older community volunteers their opinions as to the age of onset of young man- and womanhood, middle-age man- and womanhood, and old man- and womanhood. Ss were 279 undergraduates and 71 persons 60-75 yrs old and older. Data indicate that older Ss generally judged onsets of both middle and old age to occur significantly later than did young respondents and that women retarded middle- and old-age onsets, compared with men respondents. Men were generally seen as reaching transition points at a somewhat later age than women. Both sex and age of perceiver, as well as sex of the perceived, were variables in the perception of onsets of middle and old age, with onset of young adulthood a relatively fixed age for all Ss. Results are not considered compatible with an interpretation of sex differences in stage onsets based upon sex-related occupational-role discontinuities.—*Journal abstract*.

11870. Erlich, Joel H. (California School of Professional Psychology, Los Angeles) **An existential look at aging. *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5186.**

11871. Etienne, Ariane S. (U Genève, Switzerland) **[The problem of motivation in ethology.]** (Fren) *Archives de Psychologie*, 1974(Spr-Aut), Vol 42(167-168), 323-380.—Summarizes and criticizes classical ethological views of motivation; e.g., K. Lorenz's concept of action-specific energy and N. Tinbergen's hierarchically organized model of instinct. The concept of drive is given special attention; if this unifying term is to be retained, it must be based on strictly defined statistical and experimental criteria. Particular factors and mechanisms are described which act on the individual's (reversible) behavioral tendencies and may thus be considered motivational variables. These variables (hormones, excitatory states within the CNS, circadian rhythms, proprio-, intero-, and exteroceptive stimuli) are presented individually and in interaction with each other. The use of phylo- and ontogenetical methods in studying motivational systems is discussed and illustrated. (German summary) (7 p ref)—*English summary*.

11872. Feinman, Saul. (Johns Hopkins U) **Facial recognition ability in children according to race.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 7341.

11873. Freedle, Roy. (Educational Testing Service, Princeton, NJ) **Dialogue and inquiring systems: The development of a social logic.** *Human Development*, 1975, Vol 18(1-2), 97-118.—Examines 2 aspects of dialectical psychology: (a) the synthesis of a larger cognitive system from 2 previously separate parent systems, leading to a consideration of how each parent system may undergo accommodation and assimilation as a result of synthesis; (b) a demonstration of how and why dialogue undergoes continual change with occasional eruptions of logical contradictions, by modeling dialogue in terms of concepts from general systems theory. In demonstrating this, the following theoretical extensions are achieved: (a) the development of a propositional social logic, (b) the representation of dialogue case information using C. Fillmore's (1968) cases, (c) the hypothesis that children are instructed via dialogue to approximate the structure of inquiring systems, (d) the generalization of N. Rescher's (1973) theory of logical contradiction by introducing a "clinical" distinction between deep and surface propositional beliefs, and (e) the merging of gesture with verbal propositions to extend the scope of dialogue's structure and function. (22 ref) *Journal abstract*

11874. Freeman, Hazel J. (St Louis U) **The operative effect of common variables on the early development of the success potential for successful Black adult American males.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5476-5477

11875. Halverson, Charles F. & Waldrop, Mary F. (NIMH, Lab of Developmental Psychology, Rockville, MD) **Relations between preschool activity and aspects of intellectual and social behavior at age 7½.** *Developmental Psychology*, 1976(Mar), Vol 12(2), 107-112.—Explored the relations between preschool high activity and school-age behavior in 120 Ss at age 2½, and in 62 of them at age 7½. Two reliable clusters of observed behaviors activity level and social participation, were associated with teacher ratings of vigorous high active play. These 2 factors and the activity ratings were significantly

related to behavior at age 7½. For both boys and girls, vigorous, high activity showed considerable stability over 5 yrs. Vigorous, intense behavior expressed by high activity levels was negatively related to various measures of cognitive and intellectual performance at age 7½ (WISC, Children's Embedded Figures Test, and Siegel Sorting Task). Vigorous, intense behavior as expressed in social participation was positively related to the same measures of intellectual performance. The activity level component was highly related to an index of minor physical anomalies, whereas the social participation component was not. (15 ref)—*Journal abstract*.

11876. Hampton, Mary P. (St Louis U) **Perceptual differences in humor among children from four different socioeconomic environments.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5480.

11877. Haydu, George G. (Creedmoor Inst for Psychobiologic Studies, Clinical Sciences Div, Queens Village, NY) **Aging and experience forms.** *New York State Journal of Medicine*, 1975(Aug), Vol 75(9), 1556-1566.—Reviews the literature and presents a theoretical analysis relating aging as a developmental process to experience forms. Experience forms are similarly toned experience entities which merge and connect into units. All aspects of the developmental sequence are psychobiological in nature. They require continual transformation in order to integrate biological, psychological, and cultural factors. Although many physiological functions and abilities decline with age, the integrative capacities are hardly affected. New needs develop: for a better structured environment, for comfortable and easygoing ways, and for clarity and neatness. These needs are discussed from the standpoint of both the individual and the culture. (50 ref)—*P. R. Sweet*.

11878. Heemskerk, Jan J. **[Psychological aspects of adult learning.]** (Germ) *Psychologie in Erziehung und Unterricht*, 1974, Vol 21(6), 365-381.—Reviews studies of learning and memory in adults. Changes in memory and learning depend on many factors, such as the realism of the task, motivation, fear, times and intervals used for presentation and recognition or recall, previous educational level, negative transfer, the loss of techniques of coding, etc. The difficulties in teaching adults which can be overcome, and the many problems which remain to be investigated are discussed. (English summary) (122 ref)—*W. O. Horn*.

11879. Kelly, Marguerite & Parsons, Ella. **The mother's almanac.** Garden City, NY: Doubleday, 1975. 288 p. \$4.95.—Presents a guide for nurturing the development of the preschool child. Methods of encouraging independence and self-discipline, influences which provide enrichment for the child, and avenues of expression are discussed.

11880. Klein, Prina. (U Rochester) **Effects of starvation in infancy on subsequent learning abilities.** *Dissertation Abstracts International*, 1974(Sept), Vol 34(3-A), 1501

11881. Labourie-Viel, Gisela & Baltes, Paul B. (U Wisconsin, Madison) **Reduction of adolescent misperceptions of the aged.** *Journal of Gerontology*, 1976(Jan), Vol 31(1), 68-71.—40 14-18 yr old girls simulated the responses of an elderly woman on the Personality

Research Form (PRF), Form A, in pretest and were then randomly assigned to 1 of 4 training conditions involving items of PRF Form B. In specific training, feedback information of the actual self-endorsements of 10 elderly women was given with regard to the 3 PRF scales which showed largest misperceptions during pretest simulation; under general training, feedback information was given with regard to all PRF scales; 2 further conditions (no feedback training, no training) served as controls. Training was partially effective. Increased accuracy of perception was observed during posttest for the most misperceived personality dimension (dominance) both immediately after specific training and after 2 wks in a delayed posttest.—*Journal abstract.*

11882. Lawler, James. (State U New York, Buffalo) **Dialectical philosophy and developmental psychology: Hegel and Piaget on contradiction.** *Human Development*, 1975, Vol 18(1-2), 1-17.—Although Piaget's psychological theory is generally developmental and "dialectical," lack of a developed philosophical basis leads to the subordination of a dialectical approach to static, antidialectical concepts. A study of Hegel's theory of interaction and contradiction shows that the dialectical theory has a more precise meaning. Because Piaget regards mastery of formal-logical categories of identity, noncontradiction, and object permanence as a basic framework for analysis of the child's thought processes, dialectical features of the child's thought are seen as ultimately yielding to static, metaphysical thought processes. Suggestions in Piaget's later thought that even such categories are relative and transitory point to the need of developed, scientific dialectics, both as a further stage of intellectual development and as a framework for conceptualizing the dynamics of intellectual development at all stages. (17 ref)—*Journal abstract.*

11883. Lindstrom, David R. (Syracuse U) **Styles of cognitive behavior in second grade males: The relationship between conceptual tempo and responsiveness to cognitive demand.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5170.

11884. Margolis, Robert H. & Popelka, Gerald R. (U California, Medical School, Div of Head & Neck Surgery, Los Angeles) **Static and dynamic acoustic impedance measurements in infant ears.** *Journal of Speech & Hearing Research*, 1975(Sep), Vol 18(3), 435-443.—Reports tympanometry and acoustic reflex threshold data for a series of 14 presumably normal infants 55-132 days old. Comparison of data from the 2 computational procedures suggests that the MAX-MIN procedure produces means and standard deviations of static values which are more manageable for establishing confidence limits with which to evaluate potentially pathological Ss. The MAX-MIN procedure resulted in lower mean values of conductance and susceptance for infant Ss relative to previously reported adult data using a similar computational procedure. Acoustic reflex thresholds were clearly present in all testable infants at coupler sound pressure levels similar to adult data, suggesting that the relations between reflex thresholds and hearing sensitivity demonstrated in adult Ss are similarly applicable to infant Ss. It is suggested that mild sedation to induce sleep without altering the reflex would make acoustic reflex threshold measurement a useful

procedure for screening large numbers of infants. (16 ref)—*Journal abstract.*

11885. Medinnus, Gene R. (San Jose State U) **Child study and observation guide.** New York, NY: John Wiley & Sons, 1976. viii, 183 p.—Presents a 2-part student manual which (a) examines various techniques that have been developed to study and observe children and (b) provides 10 research studies that examined different areas of child psychology (e.g., language and motor development, labeling and memory, and social interaction).

11886. Menn, Lise. (U Illinois) **Counter example to "fronting" as a universal of child psychology.** *Journal of Child Language*, 1975(Nov), Vol 2(2), 293-296.—Replies to D. Ingram's (1974) proposition that children use a strategy which he terms "fronting" (e.g., given consonant, consonant-vowel, syllables, children will more easily acquire front consonants in the consonant, position) and which he suggests is universal. The present author presents data from an example to show that the strategy is not universal.

11887. Menyuk, Paula & Klatt, Mary. (Boston U, School of Education) **Voice onset time in consonant cluster production by children and adults.** *Journal of Child Language*, 1975(Nov), Vol 2(2), 223-231.—Studied voice onset time (VOT) characteristics of stops in initial clusters in American English words produced by children and adults. Words were spoken in isolation and in sentence context by 11 3-4 yr olds and a male and female adult. Spectrograms were made and VOT duration measurements taken. Three experienced listeners transcribed the isolated words and sentences. Analyses show that overall timing characteristics were similar for children and adults. Speakers differed in their [+/- voice] boundary, and there was no absolute time distinction between [+/- voice] stops; [+ voice] stops showed less variability than [- voice]. VOT generally increased from labial to dental to velar clusters and was shorter in sentence context and longer in clusters than in singletons. Coarticulation constraints affected the accuracy with which children produced the stop and liquid portion of a particular cluster.—*Journal abstract.*

11888. Meyerson, Marion D. (California State U, Fresno) **The effects of aging on communication.** *Journal of Gerontology*, 1976(Jan), Vol 31(1), 29-38.—Reviews the literature and notes that age can be estimated fairly accurately by listening to the voice and speech of the individual. The critical processes of communication—respiration, phonation, articulation, language, and hearing—are described in terms of the anticipated biological tissue changes of aging and the effect of these changes on the speaking process. With the exception of hearing loss in old age, the processes of communication do not seem to be seriously affected by normal aging. Complicating factors and diagnostic and remedial implications are discussed. (65 ref)—*Journal abstract.*

11889. Moos, Rudolf H. (Ed.). (Stanford U) **Human adaptation: Coping with life crises.** Lexington, MA: D. C. Heath & Co. 1975. xiii, 447 p. \$5.95. Discusses how human beings cope with 2 kinds of crises: the developmental life transitions experienced by many people and situations of unusual stress that occur more rarely: war imprisonment, disasters, concentration camps, confine-

ment in a skyjacked plane, rape, and the restrictive environment of a nuclear submarine.

11890. Munson, Stuart & Lehrer, Paul M. (Ulster County Mental Health Ctr, Kingston, NY) **Resolving contradictory findings on sex and social class differences in children's responses to reinforcement.** *Journal of Experimental Child Psychology*, 1975(Dec), Vol 20(3), 487-495.—Studied the relative effectiveness of 2 types of verbal and 1 type of tangible reinforcement on a 2-choice discrimination task (marble-in-the-hole) for preschool children. IQ and operant level were treated as covariates and accounted for the observed differences in performance between the 24 middle- and 24 lower-class children and between the 12 males and 12 females in each group. It is argued that disparate findings of previous studies regarding sex and social class differences might have been reconciled if baseline and IQ had been considered. (18 ref)—*Journal abstract*.

11891. Nelson, Beatrice K. (Harvard U) **Erikson's eight stages as a psychoanalytic theory of development: An inquiry.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 7111.

11892. Newman, Barbara M. & Newman, Philip R. (Eds). (Russell Sage Coll) **Development through life: A case study approach.** Homewood, IL: Dorsey Press, 1975. xi, 335 p. \$10.95.—Presents a collection of readings to illustrate the themes of cognitive, emotional, and social development from infancy through adulthood. Selections are drawn from autobiographies, letters, interviews, diaries, observer reports, and traditional case material. The cases raise issues about the influences of temperamental differences, developmental stage, cultural background, and historical period on the developing person.

11893. Palmore, Erdman & Cleveland, William. (Duke Medical Ctr for the Study of Aging & Human Development, Durham, NC) **Aging, terminal decline, and terminal drop.** *Journal of Gerontology*, 1976(Jan), Vol 31(1), 76-81.—Analyzed data from 178 participants in a 20-yr longitudinal study (E. Palmore, 1970) of persons over 60 who died of natural causes by 1974. Stepwise multiple regression was used to test for declines in function with age, for terminal decline (linear relationship to time before death), and for terminal drop (curvilinear relationship to time before death). There were no substantial terminal drop effects. All health measures had substantial declines with age, and the physician's physical function rating, as well as the individual's self-rating, showed additional terminal decline. Intelligence had a substantial decline with age and a small terminal decline. Most activities declined with age but had no significant terminal decline. Despite these declines in health, intelligence, and activities, there was little or no decline in satisfaction or adjustment. (15 ref) *Journal abstract*.

11894. Parmenter, Carolyn L. (District of Columbia Dept of Human Resources, Div of Maternal & Child Health, Washington, DC) **The asymmetrical tonic neck reflex in normal first and third grade children.** *Occupational Therapy*, 1975(Sep), Vol 29(8), 463-468.—Reports results of a study indicating that frequent, visible muscle tone changes or elbow flexion to 30° in the arm

ipsilateral to the skull position could be considered normal in children through Grade 3.

11895. Riegel, Klaus F. (U British Columbia, Vancouver, Canada) **Toward a dialectical theory of development.** *Human Development*, 1975, Vol 18(1-2), 50-64.—A dialectical theory of development is concerned with short-term situational changes (e.g., in the dialogue between mother and child), and long-term developmental changes (e.g., in the career development of husband and wife). A dialectical theory de-emphasizes equilibrium or balance at which development is at rest; it emphasizes continuing changes brought about by inner and outer contradictions. These conflicts create asynchronies within or between any 2 of 4 dimensions of development: inner-biological, individual-psychological, cultural-sociological, outer-physical. Development aims at synchronizing progressions along different dimensions. Such an interpretation is closely comparable to orchestral arrangements (from classical music to jazz) rather than to physical theories of balances on which social psychologists and even cognitive developmental psychologists continue to rely. (21 ref)—*Journal abstract*.

11896. Robertson, Jane D. (U Alabama) **Comparative study of motor achievement of five- and seven-year-old children.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 7030.

11897. Rosenthal, Marilyn S. (Georgetown U) **The acquisition of children's awareness of language differences.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 7214.

11898. Sameroff, Arnold J. (U Rochester) **Early influences on development: Fact or fancy?** *Merrill-Palmer Quarterly*, 1975(Oct), Vol 21(4), 267-294.—The concept of developmental continuity, i.e., that early characteristics presage later ones in a predictable pattern, is central to many theories of human development. The conventional concept of continuity, however, finds little support in a review of studies dealing with the persistence of perinatal complications, with the persistence of the effects of child abuse, and with intellectual and temperamental stability. It is suggested that development is better thought of as a series of reciprocal transactions between the individual and his environment than as the continual elaboration of stable individual traits. Whether a child's development appears to be continuous or discontinuous depends upon social demands, reactions, and expectancies about behavior and upon the degree of possible transfer of competence from earlier stages. The concept of simple continuity may be not only inaccurate but actually injurious, in cases where children, once labeled "abnormal," are expected to continue in their abnormality. (62 ref)—*W. R. Street*.

11899. Solkoff, Norman & Cotton, Candice. (State U New York, Buffalo) **Contingency awareness in premature infants.** *Perception & Motor Skills*, 1975(Dec), Vol 41(3), 709-710.—Five infants (mean age, 34 days) of low birthweight were placed in an artificial contingency situation in which leg movement produced movement of an overhead mobile. When compared with 5 noncontingent controls, Ss showed an increase both in frequency of kicks and in the amount of time spent focused on the mobile. Findings suggest the importance of artificially

creating contingency environments for infants, especially prematures.—*Journal abstract.*

11900. Stark, Rachel E.; Rose, Susan N. & McLagen, Margaret. (Johns Hopkins U, Medical School) **Features of infant sounds: The first eight weeks of life.** *Journal of Child Language*, 1975(Nov), Vol 2(2), 205-221.—Studied vocalizations of 2 female infants, recorded between 1-8 wks of age. Vocalizations were classified as cry, discomfort, and vegetative sounds. Five examples of each sound type were selected randomly from the output of Ss and at each of 3 age levels (90 vocalizations). No changes in features were noted as a result of increasing age. The 2 Ss showed individual feature patterns for all sound types; however, for both Ss, certain features were highly typical of cry and discomfort sounds and certain others of vegetative sounds. Implications for later speech development are discussed. (17 ref)—*Journal abstract.*

11901. Stephenson, Thomas R. (Utah State U) **Task persistence in early childhood education.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7597-7598.

11902. Surburg, Paul R. (U W Florida) **Aging and effect of physical-mental practice upon acquisition and retention of a motor skill.** *Journal of Gerontology*, 1976(Jan), Vol 31(1), 64-67.—Attempted to determine the effectiveness of physical-mental practice upon 2 age groups (65-79 and 80-100 yrs) in the acquisition and retention of a motor skill. 140 volunteers from retirement homes were randomly assigned to one of the following conditions: physical practice, one-half physical practice, physical-mental practice, or no practice. Eight trials of 15 sec each on a pursuit rotor were administered prior to and immediately following the practice conditions and 8 wks later. Analyses of data indicate that for both age groups physical-mental practice was as effective as any other type of physical practice.—*Journal abstract.*

11903. Thoman, Evelyn B. (U Connecticut) **Sleep and wake behaviors in neonates: Consistencies and consequences.** *Merrill-Palmer Quarterly*, 1975(Oct), Vol 21(4), 295-314.—Observed the sleep and wake behavior of 41 infants during 1 morning hr and 1 afternoon hr of their 1st day after birth, recording behavior, in 1 of 10 categories, at 10-sec intervals. Correlation of morning with afternoon ratings showed significant within-S consistency for sleep categories, but not for wake categories. Combining wake categories with qualitatively similar sleep categories produced 5 behavior clusters which showed significant consistency over time. Analysis of the transitions one state to another provided an outline of the typical sequencing of wake and sleep behaviors. Data are also presented from 5-wk and 8-mo follow-up studies of wake and sleep ratings, frequency of state changes, and respiration rate variability. The effects of maternal interaction on behavior consistency are discussed.—*W. R. Street.*

11904. Tieri, Augustine A. (U Maryland) **Intergenerational perception: An analysis of how elderly and young people perceive themselves and each other with regard to evaluative attitudes toward human life.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 7057-7058.

11905. Walls, Richard T. & Rude, Stanley H. (West Virginia U) **Exploration and learning-to-learn in disadvantaged preschoolers.** *Child Study Journal*, 1975, Vol 5(4), 177-191.—Assessed contributions of different novelty pairings and reward sequences to exploration behavior across 3 successive discrimination learning problems in a 3 (Familiarity) \times 2 (Reward Sequence) \times 3 (Problems) mixed design. After learning a simple 2-choice discrimination problem, 60 Headstart preschoolers responded to 6 nondifferentially reinforced trials and 6 extinction trials. A learning effect was evident with regard to both problem solution and decision time. Specific exploration was evident across problems to the extent that Ss explored a novel object even after learning that the familiar object was associated with reward. Reward sequence did not affect response selection but did increase response latency on initial nondifferentially reinforced trials. (21 ref)—*Journal abstract.*

11906. Weeks, Thelma E. (Stanford U) **The slow speech development of a bright child.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 2), 5951.

11909. Winitz, Harris. (U Missouri, Kansas City) **From syllable to conversation.** Baltimore, MD: University Park Press, 1975. viii, 128 p. \$6.50.—Discusses problems and principles in articulatory training, articulatory disorders and their treatment, articulation testing, teaching the production of sounds, transfer principles, and related topics.

11910. Wolk, Stephen & Telleen, Sharon. (U Maryland, Inst for Child Study) **Psychological and social correlates of life satisfaction as function of residential constraint.** *Journal of Gerontology*, 1976(Jan), Vol 31(1), 89-98.—Addressed 2 questions: Do residential settings of varying levels of constraint influence life satisfaction? Do such settings involve different correlates of life satisfaction? 51 residents of a Lutheran retirement home where a rigid daily schedule was kept and 78 residents of a retirement village where no specific rules prevailed were surveyed on the following measures: life satisfaction, developmental task resolution, self-acceptance, perceived autonomy, activity level, health, and educa-

tional level. Stepwise regression, covariance, and *t*-test analyses indicated that life satisfaction and developmental task accomplishment were greater in the lower constraining setting; the selected correlates resulted in multiple correlations of .675 and .590 with satisfaction; differing sets of correlates significantly predicted satisfaction in each setting, health the most important in the high constraining setting and perceived autonomy and self-concept important to the low constraining setting; developmental task success significantly predicted satisfaction in both settings. 11919. Angelev, John & Kuhn, Deanna. (Columbia U) **Development of the multiple seriation operation.** *Developmental Psychology*, 1976(Mar), Vol 12(2), 167-168. —Data from 60 1st-3rd graders support the existence of a stage in the development of multiple seriation during which elements are seriated on one dimension and classified on the other. Results suggest the potential utility of fine-grained stage analyses in elucidating (a) mechanisms of progression through a stage sequence and (b) more generally, mechanisms of information processing.

11920. Arlin, Marshall & Brody, Richard. (U British Columbia, Vancouver, Canada) **Effects of spatial presentation and blocking on organization and verbal recall at three grade levels.** *Developmental Psychology*, 1976(Mar), Vol 12(2), 113-118. —Investigated developmental trends in organization and free recall as they interact with spatial presentation and blocking. 695 Ss in Grades 4, 6, and 8 were randomly assigned to 1 of 4 conditions: spatial blocked, spatial unblocked, linear blocked, and linear unblocked. Analysis of variance for both dependent variables, organization and free recall, revealed significant main effects ($p < .01$) for all 3 variables. Blocking interacted significantly with developmental trends in both organization and recall. In addition, blocking interacted significantly with spatial presentation. (22 ref)—*Journal abstract*.

11921. Asher, Steven R. & Oden, Sherri L. (U Illinois) **Children's failure to communicate: An assessment of comparison and egocentrism explanations.** *Developmental Psychology*, 1976(Mar), Vol 12(2), 132-139. —Studied 2 possible explanations of why many young children communicate poorly on tasks that require them to discriminate referents from nonreferents: (a) poor communicators do not compare the associative strength of potential messages to the referent and nonreferent or (b) poor communicators engage in an egocentric form of comparison activity such that their messages have private but not public meaning. The latter implies that children who communicate poorly to another person could make effective use of their own messages. To examine these explanations, 64 good and poor communicators from grades 3 and 5 were asked to identify referents from their own messages. Ss who communicated poorly were also less effective than good communicators on the self-communication task. Data suggest that poor communicators do not engage in comparison activity even for their own private understanding. —*Journal abstract*.

11926. **Belmont, Lillian; Stein, Zena A. & Susser, Mervyn, W.** (NY State Dept of Mental Hygiene, Epidemiology of Mental Retardation Research Unit, NY) **Comparison of associations of birth order with intelligence test score and height.** *Nature*, 1975(May), Vol 255(5503), 54-56.—Analyzed the preinduction military examination records of 234,837 Dutch males born 1944-1946 in families of 1-6 children, studying data on family size, birth order, adult intelligence scores (Raven Progressive Matrices), adult height, and father's occupation (manual or nonmanual). Correlations among these variables for the total population and for each family size are presented in detail. Higher test scores were associated with earlier birth order at virtually all levels of family size and social class. Greater height was associated with smaller families at all levels of birth order and social class, but not with birth order. Since height is an index of the physical and biological environment during growth, its relationship with family size is consistent with environmental effects. It would seem, however, that the fullest development of adult intelligence requires factors other than nutritional adequacy and good physical health; e.g., family environment and intrafamily socialization.—*I. Davis.*

11927. **Bornstein, Marc H.; Kessen, William & Weiskopf, Sally.** (Yale U) **The categories of hue in infancy.** *Science*, 1976(Jan), Vol 191(4223), 201-202.—Conducted a study with 80 healthy, full-term 4-months in 8 groups to test the hypothesis that very young human infants would see a wavelength in a categorical fashion much like that of adults. S looking time was monitored during habituation to the repeated presentation of a wavelength stimulus selected from one basic adult hue category and after a change in stimulation. Recovery from habituation was greater to a wavelength selected from an adjacent hue category than to a wavelength from the same category even though these 2 stimuli were equally distant (in nanometers) from the habituation wavelength. Differential responding evidenced Ss' categorical perception of hue (i.e., Ss saw the physically continuous spectrum as divided into the hue categories of blue, green, yellow, and red. These results help to resolve the long-standing controversy surrounding the primacy of perception over language in the organization of hue.—*Journal abstract.*

11928. **Bovet, Magali; Baranzini, Carla; Dami, Catherine & Sinclair, Hermine.** (U Genève, Switzerland) **Children's precepts of (the conservation of) physical quantity.** [I (en) *Archives de Psychologie*, 1975(Spr), Vol 43(169), 47-81.—Conducted a series of experiments to investigate the possible existence of various precepts of physical quantity conservation. Results show that from age 8, children affirmed simultaneously a conservation of weight (i.e., "heaviness" of an object

which is not moving), of voluminosity (i.e., "occupied place"), and of simple density (i.e., "difference in heaviness"), when they were presented with specific experimental situations. It is suggested, therefore, that the organization which linked these 3 elementary notions of physical conservation appeared as a necessary step toward the construction of the system of relations into which these concepts are coordinated at their adult achievement level. A learning experiment on the preconcept of voluminosity showed different sublevels in the elaboration of this conservation concept. (French & German summaries)—*English summary.*

11929. **Boyce, Elaine M.** (United States International U) **Relationship of certain Piaget-type tasks to learning modality preference in selected children.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1490-1491.

11930. **Bradley, Robert H. & Caldwell, Bettye M.** (U Arkansas, Ctr for Early Development & Education, Little Rock) **Early home environment and changes in mental test performance in children from 6 to 36 months.** *Developmental Psychology*, 1976(Mar), Vol 12(2), 93-97.—Administered the Bayley Scales of Infant Development at 6 mo and the Stanford-Binet Intelligence Scale at 3 yrs to 77 normal children. When each S was 6 mo old, the family was observed and interviewed using the Home Observation for Measurement of the Environment (HOME), a measure of the quality of stimulation in the early environment. A difference of 21 or more points between a S's 6-mo Bayley Mental Development Index score and 3-yr Stanford-Binet score was used to determine whether the S had increased, remained stable, or decreased in mental test performance. Multiple discriminant analyses were done using the 6 subscales of the HOME inventory to differentiate among increasers, nonchangers, and decreasers. Increases in test performance were related to 2 subscales, Maternal Involvement with Child and Provision of Appropriate Play Materials. Decreases were related to inadequate Organization of Physical and Temporal Environment. Results indicate that home environment may contribute to instability of performance on infant tests. Results are in agreement with the findings of R. B. McCall et al (see PA, Vol 53:4922) regarding gains for 2½-17 yr olds, except that the parents' method of discipline may not be quite so important for infants.—*Journal abstract.*

11932. **Bullinger, André; Hauer, Claude A. & Haudman, Jean-Louis.** (U Genève, Faculté de psychologie et des sciences de l'éducation, Switzerland) **[Oscillatory behaviors in a seriation task.]** (Fren) *Cahiers de Psychologie*, 1974, Vol 17(2), 65-77.—Analyzed results of A. Bullinger's (1973) experiment on the oscillation behavior of 74 children aged 8-14. Ss were required to place in order of weight 3 cylinders using 2 referent cylinders. The 3 test cylinders were weighed 1 at a time on a given pan of the scale and the 2 referent cylinders 1 at a time on the other pan. Half the Ss, including 80% of those 11-12, exhibited the oscillation behavior, grouping

the cylinders in one configuration (2 heavy, 1 light) when comparing them with one referent and in another (1 light, 2 heavy) in comparison with the other. This behavior appeared to result when Ss were asked to deal with a reality—an object having apparently contradictory characteristics—for which they did not yet have adequate cognitive structure. The initial accommodation is interpreted as a necessary but not a sufficient condition to the stabilization of a new cognitive organization. Assimilation, however, was not immediately achieved at the new level. (English abstract)—*E. Brown.*

11934. **Carter, Anne L.** (U California, Berkeley) **The transformation of sensorimotor morphemes into words: A case study of the development of "more" and "mine."** *Journal of Child Language*, 1975(Nov), Vol 2(2), 233-250.—Describes an evolving segment of communication during the course of transition of 1 child's total communication system from the sensorimotor or gestural level at 12 mo into the level of use of the adult words *more* and *mine*, and their associated multimorphemic utterances, at 24 mo. The descriptive analysis is based on detailed narrative records of the child's vocal and gestural communication, abstracted from videotape recordings of his behavior in 10 play sessions which included the presence of the mother, peers, other adults, and play materials. Results provide a case study of the evolutionary processes leading up to the acquisition of words and eventually sentences, illustrating the texture of one of the earliest developmental sequences.—*Journal abstract.*

11936. **Chipman, Susan F. & Mendelson, Morton J.** (U Michigan, Ctr for Human Performance) **The development of sensitivity to visual structure.** *Journal of Experimental Child Psychology*, 1975(Dec), Vol 20(3), 411-429. Studied perceived complexity of visual patterns as a function of stimulus structure and contour; Ss were a total of 106 4-5-, 7-8-, and 9-10-yr-old children and adults. Ss participated in a paired comparison task of visual complexity. Both amount of contour and the presence or absence of structure in the patterns were manipulated. Results indicate that complexity judgments of all Ss were affected by the presence of structure at lower levels of contour. With age, gradually increasing weight was attributed to visual structure in high-contour patterns. Results suggest that sensitivity to visual structure may develop well into school age, taking the form of a gradual increase in the number of pattern elements which can be perceived to be organized. 11937. **Cruttenden, A.** (U Manchester, England) **An experiment involving comprehension of intonation in children from 7 to 10.** *Journal of Child Language*, 1974(Nov), Vol 1(2), 221-231. Notes that a frequent claim has been made that the acquisition of intonation

precedes other language learning. Little is known about developing comprehension of language in general and of intonation in particular. This article reports the result of an experiment testing the comprehension of certain intonation patterns of 28 7-10 yr old boys. It was found that development is still going on during these years and is not wholly complete by the end of this period. Suggestions are made about the order of acquisition.—*Journal abstract.*

11940. **Davis, Edward J.** (U Georgia) **Some effects of reward on the responses of kindergarten children in making transitive inferences.** *Journal of Educational Research*, 1975(Sep), Vol 69(1), 36-39.—Results of a study of 42 5-yr-olds indicate the number of correct responses to questions involving transitive inferences with matching relations can be significantly increased by offering a reward. Some increase occurred for both high and low conservers, across all 3 matching relations, and in both reward settings.

11941. **de Gramont, Patrick L.** (Yeshiva U) **The effect of physical and social problems on school related skills.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5164.

11942. **de Schonen, Scania.** (Ecole Pratique des Hautes Etudes, Ctr d'Etudes des Processus Cognitifs et du Langage, Paris, France) **[A study of how children 2.6-4.5 yrs old interpret static bidimensional representations of space, using projective perspective.]** (Fren) *Archives de Psychologie*, 1974(Spr-Aut), Vol 42(167-168), 287-310.—Presented 82 Ss with 2 successive tasks. In Task 1 they had to place 2 (or 3) solids in the same relative positions as models made of similar solids. In Task 2 Ss were shown pictures representing the same 2 (or 3) solids on a table in the same positions as in the 1st task; the pictures were drawn from a fronto-parallel point of view. The Ss were asked to place their 2 (or 3) solids in the same relative positions as those in the pictures. Comparison of performances on the 2 tasks shows that success in copying 3-dimensional models happens earlier than for 2-dimensional models. The erroneous transpositions from 2-dimensional models were analyzed. Results emphasize the difference between relations that are sometimes transposable by translation from a 2-dimensional to a 3-dimensional space and relations that are never transposable by translation. (German summary) —*English summary.*

11943. **de Villiers, Jill & Tager-Flusberg, Helen B.** (Harvard U) **Some facts one simply cannot deny.** *Journal of Child Language*, 1975(Nov), Vol 2(2), 279-286.

Tested 39 2-, 3-, and 4-yr-olds on a variation of P. C. Wason's (see PA, Vol 39:9384) procedure for testing the effects of plausibility on the comprehension of negative statements. Negatives about an exceptional item in an array (e.g., plausible negatives) were understood before implausible negatives. Reaction time data reveals that

plausible negatives were also processed more rapidly for 3-, and 4-yr-olds. An additional effect on plausibility, namely the degree of confusability between the different items in an array, was proposed, and was found to become increasingly salient with age.—*Journal abstract.*

11946. **Edwards, Mary L.** (Scottish Rite Inst for Childhood Aphasia, Palo Alto, CA) **Perception and production in child phonology: The testing of four hypotheses.** *Journal of Child Language*, 1974(Nov), Vol 1(2), 205-219.—Collected perception and production data from 28 children aged 1.8-3.11 yrs to test 4 specific hypotheses on the acquisition of initial fricatives and glides in English, based on the assumptions that perception precedes production and unmarked precedes marked. Pairs of objects were given nonsense names, consonant-vowel-consonants differing only in the initial sound; the child was asked to perform certain actions with the named objects and if he was correct on 7 out of 10 trials he was assumed to have demonstrated phonemic perception of the opposition in question. Production data were compared to the perception data. Results only partially confirm the hypotheses and indicate that (a) children as late as age 3.0 yrs do not have complete phonemic perception; (b) phonemic perception develops gradually, generally in advance of production; and (c) the order of acquisition shows trends toward uniformity but is not universal.—*Journal abstract.*

11947. **Flynn, Timothy M.** (Southern Illinois U) **Behavioral components of school readiness.** *Journal of Experimental Education*, 1975(Fal), Vol 44(1), 40-45.—Determined behavioral characteristics of 61 male and 72 female 3-4 yr old migrant children that were related to school readiness. Change during a 3-mo interval in a compensatory preschool program in self-concept, delay of gratification, self-control, and risk taking was analyzed using multiple linear regression. For girls, growth in self-concept and delay of gratification was significantly related to growth in school readiness, while for boys, measures of change in self-control predicted growth in school readiness.—*Journal abstract.*

11948. **Gaines, Rosslyn & Little, Angela C.** (U California, Los Angeles) **Developmental color perception.** *Journal of Experimental Child Psychology*, 1975(Dec), Vol 20(3), 465-486.—Extended an earlier author-conducted study (see PA, Vol 49:4122) to investigate the development of surface color perception across several age levels. Ss were 47 kindergarten and 15 5th grade children, 14 high school sophomores, 16 28-52 yr old parents of kindergartners, and 15 29-58 yr old professional artists. The 108-item color perception test, originally used with young children, employs 6 hue matrices from the Munsell Book of Color (1963) divided into 9 combinations each of low, mid, and high chroma and low, mid, and high value across 2 levels of hue

difficulty. The pattern of error results were the same across all age levels. The lower the chroma and value, the higher the error rate; the higher the chroma and value, the lower the error rate. In hues, green and red were most difficult; orange and yellow were easiest. The frequency of error was linear with respect to age: the younger the group, the higher the error. The latency data differed with respect to age: adults were slowest, followed by kindergartners and 5th graders. High school sophomores were the fastest. The remaining latency results paralleled the error results: the lower the chroma and value, the longer the latency, and the more difficult the hue, the longer the latency. A set of surface color perception rules is presented. (18 ref)—*Journal abstract.*

11950. **Gottfried, Adele E.** (Graduate School & University Ctr, City U New York) **Effects of instructions and stimulus representation on selective learning in children.** *Developmental Psychology*, 1976(Mar), Vol 12(2), 140-146.—Studied the effects of 2 types of incidental learning paradigms and the influence of different kinds of stimulus relationships on 168 1st and 6th graders' selective learning processes. Eight pairs of colored pictures were presented in each experimental condition. Incidental instructions were varied with respect to the absence vs presence of a concurrent intentional task. Within both instructional conditions, pairs of stimuli were either conceptually related, perceptually related, or unrelated. Free recall and pair retention were measured. Developmental similarities in selective learning processes were evidenced by younger and older children's equivalent patterns of stimulus selection. These patterns were significantly related to the type of incidental paradigm and stimulus relationship presented. Absolute amount of retention was positively related to age. It is concluded that patterns of stimulus selection and amount of learning reflect different processes and that both should serve as a criteria for developmentally studying selectivity. 11952. **Gruber, Howard E. & Susswein, Ben J.** (Rutgers State U, Inst for Cognitive Studies) **Memory of a common object: A developmental study of the "Scheerer effect."** *Archives de Psychologie*, 1975(Spr), Vol 43(169), 19-26.—Examined the "Scheerer effect" by presenting a total of 85 Ss (3rd graders, adolescents, and adults) with an ordinary telephone dial and requiring them to draw the numbers and letters as they appear on the dial of the telephone. Results show that the 3rd graders attained a maximum in schematization; the resulting errors were later partially eliminated by a process of compensation, or schematization and schema correction, which reached a maximum in adolescence and then declined. It is pointed out that for all ages tested, the typical S "remembered" something he had never seen. The schema that guided the recollection of

the dial was neither the faithful copy of an external reality nor the record of the S's visual-motor behavior. It was, instead, the product of the S's own mental ability. (English, French & German summaries)—*M. E. Pounsel.*

11953. Harris, Adrienne E. (York U, Glendon Coll, Toronto, Canada) **Social dialectics and language: Mother and child construct the discourse.** *Human Development*, 1975, Vol 18(1-2), 80-96.—The child's development of productive control over the adult language system is seen as an outcome of the dynamic social discourse of parent and child. Traditional approaches to child language are reviewed, and a dialectical analysis is alternatively developed using concepts from information theory and a general systems approach. In this analysis, the dialogue of mother and child is treated as an open system. The central and mutually regulated activity is the construction of a digital system interfaced to the prior analogic communication of the mother-child dyad. A dialectical analysis stresses the contradictory aspect of all material phenomena. Contradiction in the discourse is identified at the level of symbolization, message, exchange, and structure. Alternative linguistic methods are examined for their potentiality in the treatment of dialogue. Firthian and neo-Firthian theory, scale category grammars, and stratificational linguistics are briefly examined as alternatives and additions to the generative grammatical theory which has dominated developmental psycholinguistics to date. 11956. Ingram, David. (U British Columbia, Vancouver, Canada) **Surface contrast in children's speech.** *Journal of Child Language*, 1975(Nov), Vol 2(2), 287-292.

Argues that children have phonemic systems of their own. Data is offered to show that surface contrasts exist in children's speech that cannot always be traced to aspects of the adult word. The child, in the process of acquisition, is constantly comparing his productions and making changes in those that do not maintain a surface contrast.

11959. Keenan, Elinor O. & Klein, Ewan. (U Southern California) **Coherency in children's disclosure.** *Journal of Psycholinguistic Research*, 1975(Oct), Vol 4(4), 365-380. Provides evidence that the capacity of young children to engage in social interaction exceeds one suggested by Piaget (1926). Rather than being collective monologues, the conversations between the Ss of this

study (1 pair of 2-yr-old twin boys) were dialogues: the Ss attended to one another's utterances and provided relevant responses. This was observed for conversations which were referentially based as well as for sound play exchanges. This is not to say that the Ss experienced no difficulty in sustaining cooperative discourse. It could take a speaker several turns to secure the attention of the coconversationalist and establish a discourse topic. (19 ref)—*Journal abstract.*

11960. Kemler, Deborah G. & Jusczyk, Peter W. (U Pennsylvania) **A developmental study of facilitation by mnemonic instruction.** *Journal of Experimental Child Psychology*, 1975(Dec), Vol 20(3), 400-410.—A total of 144 1st and 4th graders and university students were given mnemonic instructions to imagine or to verbalize a sentence in order to study either a sentence or a noun pair provided aurally. Eight uninstructed controls were also included at each age level. A test of cued recall evaluated the amount of facilitation by mnemonic instruction in each group. Both types of instruction enhanced children's memory, most notably when verbal pairs served as stimuli. However, whereas 1st graders under imagery instruction were inferior on pairs relative to sentence stimuli, 4th graders and adults recalled the 2 stimulus types equivalently. Also, whereas 1st graders performed at the same level on sentences and pairs under the verbalization instruction, 4th graders were superior on the pairs. Results indicate that greater requirements for S-generated mediation to some degree penalized the younger Ss and benefited the older ones.—*Journal abstract.*

11961. Kuhn, Deanna. (California State U, Fullerton) **Relation of two Piagetian stage transitions to IQ.** *Developmental Psychology*, 1976(Mar), Vol 12(2), 157-161.—An analysis of psychometric and Piagetian assessments of children's mental ability led to the prediction that the relation between these 2 kinds of assessments diminishes as children advance in age and stage level. The prediction was confirmed. A high correlation was found between MA (WISC scores) and progression toward Piaget's stage of concrete operations among 52 middle-class 6-8 yr olds, but the correlation was nonsignificant between MA and progression toward Piaget's stage of formal operations among 56 middle-class 10-12 yr olds. Alternative explanations of results are considered, and additional evidence is discussed which suggests that, although IQ is not related to the emergence of formal operations in preadolescence, the full development and/or maintenance of formal functioning during adulthood bears a relation to those educational and cultural advantages associated with higher IQs.—*Journal abstract.*

11962. Langford, P. E. (U London, Birkbeck Coll, England) **Development of concepts of infinity and limit in mathematics.** *Archives de Psychologie*, 1974(Spr-Aut), Vol 42(167-168), 311-321. Suggests that there are 2 stages in the development of the child's concept of mathematical infinity: the concept of potential infinity develops between the ages of 9 and 13, but the concept of completed infinity develops after age 15. Previous reports that the concept of infinity is not developed until age 12 are reconsidered. 2 experiments, each with 140 Ss, are reported, in which

further evidence for the proposed stages was obtained. (French & German summaries)—*English summary*.

11963. **Lederman, S. J.** (Queen's U, Kingston, Canada) **Early perceptual development in humans and animals: A bibliography of English-language papers, 1967-1974.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 875-894.—Presents an alphabetical listing by authors of 482 articles and books covering the more traditional topics in perception (e.g., perception of form, pattern, size, orientation, motion, time, localization, pain, weight, eidetic imagery, and selective attention).

11964. **Lehman, Elyse B. & Goodnow, Jacqueline.** (George Washington U) **Directionality in copying: Memory, handedness, and alignment effects.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 863-872.—Explored the effects of memory, handedness, and the relative position of model and copy on the sequential behavior (starting points and stroke progressions) of children copying a set of shapes. Exp I (memory) involved 46 kindergartners; Exp II (handedness), 36 kindergartners; and Exp III (alignment and proximity), 20 Ss from each of kindergarten, 2nd, and 4th grades. Availability of the model had no effect; Ss followed the same paths when copying with the model present or with it absent. Handedness, however, affected left-right directionality, while the proximity of model and copy affected threading and, to a lesser extent, top-bottom directionality. Results are discussed in terms of implications for questions about sources of directionality. (23 ref)—*Journal abstract*.

11965. **Lodge, Donna N. & Leach, Edwin A.** (Columbia U) **Children's acquisition of idioms in the English language.** *Journal of Speech & Hearing Research*, 1975(Sep), Vol 18(3), 521-529.—Studied idiomatic comprehension in 4 groups of 20 Ss each, ages 6, 9, and 12 yrs, and adult. Each S was read 10 sentences which could be interpreted literally or idiomatically. Following each sentence, the S chose the 2 pictures that were closest in meaning to the sentence heard. This procedure generated 800 pairs of selections for analysis. Results indicate (a) significant difference between literal and idiomatic choices regardless of S's age or the voice of the sentence, (b) significant differences between literal and idiomatic choices as a function of age regardless of the voice of the sentence, and (c) significant voice-by-choice interaction indicating that voice affected the choice of literal or idiomatic picture representations.—*Journal abstract*.

11966. **Maisto, Albert A. & Baumeister, Alfred A.** (U Alabama) **A developmental study of choice reaction time: The effect of two forms of stimulus degradation on encoding.** *Journal of Experimental Child Psychology*, 1975(Dec), Vol 20(3), 456-464.—Conducted 2-choice-reaction time experiments, following S. Sternberg's information reduction model (see PA, Vol 41:5364) in which probe stimulus quality was manipulated. Ss were 14 preschool, 14 3rd, 14 5th grade children. In Exp I a masking pattern was superimposed over the probe stimuli (digits), producing differential intercept values across age levels. Results are interpreted as reflecting changes in encoding processes with increasing age. In Exp II stimulus degradation was accomplished by removing details from simple line drawings of common objects. In this case, intercept values were affected by variations in probe

stimulus quality, but not differentially across age levels.—*Journal abstract*.

Orientation of meaningful figures was remembered better than orientation of nonmeaningful figures at all ages. Pronounced developmental differences were found in memory for nonmeaningful figures, but not for meaningful figures beyond kindergarten. It is proposed that a decision to store orientation information is dependent on a judgment about the meaningfulness of a presented figure and that young children have more difficulty than adults in finding meaningfulness in unfamiliar forms. The decision to store appears to occur automatically, since there was only a small difference between conditions in which Ss were informed or not informed to remember orientation. Part of the difficulty in remembering diagonal orientation may be due to the symmetry of the diagonal forms typically investigated. (17 ref)—*Journal abstract*.

11973. **McGurk, Harry & Jahoda, Gustav.** (U Surrey, Guildford, England) **Pictorial depth perception by children in Scotland and Ghana.** *Journal of Cross-Cultural Psychology*, 1975(Sep), Vol 6(3), 279-296.—128 Scottish and 80 Ghanaian 4-13 yr old Ss constructed 3-dimensional models representing the size and spatial relationships between figures in pictorial scenes in which 3 depth cues—elevation, texture gradient, and linear perspective—were manipulated. For both samples, size accuracy increased with the amount of depth information available; it also increased with age in the Scottish but not in the Ghanaian sample. Spatial accuracy increased with age in both samples, but was influenced by type of depth cue only in the Scottish sample. Scottish children were more accurate throughout than Ghanaian children. However, the evidence does not support the

view that African children are grossly deficient in perceiving pictorial depth. (15 ref)—*Journal abstract.*

11983. Piaget, Jean & Chatillon, J.-F. (U Geneva, Switzerland) **[Solubility, miscibility, and flotation.]** (Fren) *Archives de Psychologie*, 1975(Spr), Vol 43(169), 27-46. Analyzed the causes children attributed to the way in which bodies of matter dissolve and float and how liquids blend. Ss were required to explain (a) how and why bodies of differing density (e.g., sugar, stone, oil) dissolve or float when immersed and (b) nonblending and relative floating of a drop of oil falling into liquids of different density. The behavioral patterns observed were classified in 3 stages during which the Ss progressively dropped their psychomorphic explanations in favor of an analysis of the bodies' properties and their interrelationships. It was found that around age 11, the child built up a system of ratios between weights and volumes from which ensued a true explanation of the phenomena observed. 11985. Rayner, Keith & Hagelberg, Ellen M. (Rochester, Ctr for Development, Learning, and Instruc-

tion) **Word recognition cues for beginning and skilled readers.** *Journal of Experimental Child Psychology*, 1975(Dec), Vol 20(3), 444-455.—In 3 experiments with a total of 102 kindergartners, 1st graders, and undergraduates, Ss chose from an array the response alternative that most resembled a nonsense stimulus trigram or quingram. Ss could respond on the basis of individual letter positions or overall word shape. However, word shape was not manipulated independently of the individual letters that comprise the word as in previous studies. Kindergartners and 1st graders who were poor readers showed a more varied pattern of responses than 1st graders who were good readers. (Ss' reading skills were assessed by teachers and by Ss' scores on the Gates-McGinitie Reading Test.) With simple stimuli (trigrams), beginning and skilled readers chose alternatives on the basis of overall shape and the initial letter. With more complex stimuli (quingrams), the skilled readers continued choosing on the basis of word shape and initial letters, but beginning readers only chose on the basis of the 1st letter. 11988. Sambursky, Joel H. (Hofstra U) **The relationship between socioeconomic status and the vocabulary of Negro kindergarten children.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5175.

11989. Savić, Svenka. (Inst for Linguistics, Novi Sad, Yugoslavia) **Aspects of adult child communication: The problem of question acquisition.** *Journal of Child Language*, 1978(Nov), Vol 5(2), 251-260. Observed a firstborn pair of male and female twins between the ages of 1-3 yrs transcribing maternal during weekly 2-hr sessions in the Ss' home. Analyses were made of adult and children's questions. Findings show (a) a long period of "incubation" during which parents used almost all types of questions prior to the time when the children started producing questions; (b) questions were the most frequent type of utterance in adult speech; (c) the order in which adults asked the children questions did not correspond to the order in which questions appeared in the children's speech, nor did children's frequency of

specific question types correspond in any close way to the adults' frequency, suggesting that factors other than adult speech play an important role in the early acquisition of questions; (d) when the twins did begin to use certain questions, they appeared simultaneously in the speech of both children, and with almost equal frequency, contrasting with earlier findings that the sex factor is dominant. Other findings are discussed. (19 ref) —P. O'Brien.

11990. Schiff, William & Saarni, Carolyn I. (New York U) **Perception and conservation of length: Piaget and Taponier revisited.** *Developmental Psychology*, 1976(Mar), Vol 12(2), 98-106.—Reports a developmental comparison of judgments of length made by 40 5-yr-olds, 40 8-yr-olds, and 40 adults (mean age, 27 yrs). Ss judged relative lengths of lines presented in pairs via animated films both in static views and under several transformation conditions. The secondary illusion found by Piaget was not replicated, but children were superior to adults in judging static unequal-length line pairs. In the transformation conditions, most 8-yr-olds and adults conserved length, whereas most 5-yr-olds did not. For lines that lengthened during displacement, no age differences were found. Results indicate greater interdependence of judging accuracy in the 2 conditions than suggested by Piaget's hypothesis and cast doubt on typical explanations of failure to conserve. Fine-grain analyses of accuracy data suggest that several stimulus factors and age shifts in guessing strategies are involved. —Journal abstract.

11991. Schonfield, David & Wenger, Larry. (U Calgary, Canada) **Age limitation of perceptual span.** *Nature*, 1975(Jan), Vol 253(5490), 377-378.—Requested 5 male and 5 female Ss in each of the age groups 20-30, 40-50, and 60-70 yrs to identify in correct order 1, 2, 3, 4, and 5 letters printed in black on a white card. The youngest Ss had the lowest thresholds for all letter groups. The difference between the oldest and the middle-aged Ss was significant only for 5 letters. The oldest Ss required much more time to identify 5 letters than 4 letters. Other results indicate that the limited perceptual span of the elderly was not due primarily to poorer peripheral vision or to output interference. Its major component is more probably a deficit in sensory memory storage. —J. Davis.

11992. Schultz, Norman R. & Hoyer, William J. (Syracuse U) **Feedback effects on spatial egocentrism in old age.** *Journal of Gerontology*, 1976(Jan), Vol 31(1), 72-75.—Examined the extent to which perspective-taking feedback and practice reduce the egocentric performance of elderly individuals. 36 61-88 yr old middle-class volunteers were assigned to 1 of 3 conditions: feedback, practice, or control. Either immediately or 2 wks after training, Ss were posttested on measures of spatial egocentrism, fluid intelligence, perceptual speed, and volume conservation. The effect of perspective-taking feedback was to improve scores on the spatial egocentrism task, but this influence did not directly generalize to the other ability measures. Emphasis is placed on the importance of environmental experiential variables in the acquisition and maintenance of cognitive abilities in old age. (20 ref)—Journal abstract.

11993. Sheingold, Karen & Shapiro, Janet. (Cornell U) **Children's verbal rehearsal in a free-recall task.** *Developmental Psychology*, 1976(Mar), Vol 12(2), 169-170.—Predicted that, while the use of categories in rehearsal would increase with age, organized rehearsal would be related to recall accuracy and recall organization for all ages tested. Data from 20 3rd and 20 6th graders confirm the predictions but are inconclusive for 20 kindergartners.

11994. Siegler, Robert S. (Carnegie-Mellon U) **Defining the locus of developmental differences in children's causal reasoning.** *Journal of Experimental Child Psychology*, 1975(Dec), Vol 20(3), 512-525.—Conducted 5 experiments with a total of 54 kindergartners and 66 3rd graders to (a) validate R. S. Siegler and R. M. Liebert's (see PA, Vol 52:12051) reported developmental difference in causal reasoning, (b) examine the role of a possible mediating mechanism, and (c) test a number of competing theoretical interpretations. As previously, the regularity of a cause-effect pairing influenced the causal attributions of 8- and 9-yr-olds but not of 5- and 6-yr-olds; results are found not to be artifacts of either a response induced commitment to choosing a particular object or the brevity of the exposure period. The developmental difference also was not explained by discrepant encoding of the term "cause," by memorial deficiencies, or by differences in criteria for drawing causal inferences. Instead, it appears that greater perceptual distractibility prevented the younger children from searching for and finding the temporally invariant relationship hypothesized to be crucial to inferring causality in the experimental situation. (18 ref)—Journal abstract.

11995. Strauss, Sidney. (Tel-Aviv U, Israel) **A reply to Brainerd.** *Cognition*, 1974-75, Vol 3(2), 155-185.—Replicates to C. J. Brainerd's (see PA, Vol 53:2852) criticism of the present author's (see PA, Vol 51:6870) review of the literature on short-term training experiments in the inducing of cognitive development and learning, specifically the organismic-developmental approach. The present author concludes that his original assessment of the literature is sustained. (92 ref)

11996. Tenny, Yvette H. (Cornell U) **The child's conception of organization and recall: The development of cognitive strategies.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5233.

11997. Thieman, Thomas J. (U Illinois) **Imitation and recall of optionally deletable sentences by young children.** *Journal of Child Language*, 1975(Nov), Vol 2(2), 261-269.—Read a set of sentences written in either an expanded or optionally deleted form to 16 4-5 yr olds for imitation and delayed recall. A similar set of sentences was presented for recall to 30 college students. Older children and adults tended to recall the sentences in deleted forms, regardless of their input form. The youngest child, however, recalled the sentences in a fully expanded form, even when they had been presented and imitated in deleted form. Results offer support for the hypothesis of memory for nonlinguistic ideas by both children and adults, as well as a demonstration of D. I. Slobin's (1973) universal operating principle that when children are first gaining control of an optionally

deletable linguistic entity, they will often produce only its full form.—*Journal abstract.*

11998. Townsend, David J. & Erb, Melinda. (Montclair State Coll) **Children's strategies for interpreting complex comparative questions.** *Journal of Child Language*, 1975(Nov), Vol 2(2), 271-277.—Asked questions of 54 3-6 yr olds such as "Which box is Xer than it is Z?", where "Xer" was taller, shorter, fatter, or thinner and "Z" was tall or fat, in the context of 5 rectangles of varying dimensions. For most questions, the largest rectangle was chosen most often as an answer, regardless of the adjectives used. Older Ss often chose the Xest rectangle in the array, indicating interpretation of only the 1st clause of the question. After providing feedback on incorrect answers for the 5-yr-olds, a posttest showed a decrease in frequency of choices of the largest rectangle, no change in frequency of choices of the Xest rectangle, and, for some questions, an increase in the frequency of choices of the correct rectangle. Results are interpreted to mean that the linguistic strategy of attending to the 1st clause is more resistant to change than the more primitive nonlinguistic preference for choosing the largest object without interpreting the sentence.—*Journal abstract.*

11999. Treat, Nancy J. & Reese, Hayne W. (West Virginia U) **Age, pacing, and imagery in paired-associate learning.** *Developmental Psychology*, 1976(Mar), Vol 12(2), 119-124.—18 males and 36 females in each of 2 age groups (mean ages, 29 and 69 yrs) learned highly concrete noun pairs. Anticipation and presentation intervals were manipulated (2 vs 6 sec), and there were no, E-provided, or self-generated imagery instructions. Sex of S and presentation interval had no significant effects. Both age groups benefited from imagery instructions, especially self-generated imagery. With self-generated imagery and the longer anticipation time, the old performed as well as the young; with no-imagery instructions and the shorter anticipation time, the young performed as poorly as the old. With the other combinations of instructions and intervals, the young outperformed the old. Thus, the young needed the longer anticipation time only in the no-imagery condition, but the old needed it to benefit from the imagery instructions. It is concluded that the old are as capable as the young of generating and using imagery when so instructed, although the old require a longer retrieval time. (17 ref)—*Journal abstract.*

12000. Vardi, Beverly J. (Yeshiva U) **Verbal, visual and motor cues in perceptual discrimination in children.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5735.

12001. Wagner, Daniel A. (U Michigan) **The effects of verbal labeling on short-term and incidental memory: A cross-cultural and developmental study.** *Memory & Cognition*, 1975(Nov), Vol 3(6), 595-598.—208 Mexican males and females in 4 age groups (7-8, 10-11, 13-15, and 20-21 yrs) were shown cards depicting familiar animals and objects over 14 trials. Short-term memory was tested with a probed serial recall task on each trial. Incidental memory was tested following the 14 trials. Results are consistent with findings from earlier studies using American Ss: short-term memory improved with age; primacy and recency recall were influenced by both

age and labeling; and the typical inverted U-shaped incidental memory function was found. Verbal labeling apparently aided recall by focusing attention on the relevant items, but such overt labeling also impeded the strategy of verbal rehearsal used by older Ss. Cultural factors appeared to play a limited role; the common element of formal schooling, among both American and Mexican Ss, is suggested as a possible explanation of such cross-cultural similarities.—*Journal abstract.*

12002. Weld, Gary L. (U Florida) **Behavioral correlates of intellectual performance among disadvantaged three-year-old Negro children.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 7059.

12003. Wyatt, Gail E. (U California, Los Angeles) **The relationship of life changes and locus of control attributions to cognitive aspects of the Black mother-child interaction.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 7059-7060.

environmental conditions that promote creativity indicates that the conditions are not intrinsic to either the nuclear family or to the group-rearing model of living. Topics treated include personality characteristics of creative individuals, identification with the parent, and regression. (56 ref)

12021. Khatena, Joe. (Marshall U) **Imagination imagery of children and the production of analogy.** *Gifted Child Quarterly*, 1975(Win), Vol 19(4), 310-315.—Used the Onomatopoeia and Images test to analyze the imagery responses of 248 school children, Grades 3-12, who had standard scores of 66 or above on originality. The simple, direct images were most frequently produced, boys excelling somewhat in the production of complex imagery. Peak production ages of complex images were 12 for boys and 13 for girls.—*J. C. Gowan.*

12022. Konle, Carolyn W. (U Wisconsin) **Sex role socialization and instrumentality.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6771.

12023. Kuhn, Deanna. (California State U, Fullerton) **Short-term longitudinal evidence for the sequentiality of Kohlberg's early stages of moral judgment.** *Developmental Psychology*, 1976(Mar), Vol 12(2), 162-166.—Investigated (a) how the reliability of an instrument for assessing developmental stages is established and (b) the relation between reliability and sequentiality of the stages. It is argued that reliability of the instrument cannot be established directly by traditional methods but must be inferred from a validation of the stage sequence. Short-term longitudinal data were obtained for 50 5-8 yr olds on the Kohlberg Moral Judgment Interview. For each of 2 6-mo intervals, it was not possible to reject the null hypothesis that progressive change and regressive change were equally likely. Over 1 yr, however, significant progressive change was found, most of which consisted of slight advancements toward the next stage in Kohlberg's sequence. It is argued that the considerable short-term fluctuation obtained may be due either to measurement error or to genuine fluctuation in the individual's judgment.—*Journal abstract.*

12024. Lalanne, J. **[An approach to the study of moral development.]** (Fren) *Revue de Psychologie Appliquée*, 1975, Vol 25(3), 127-148.—Reviews current research on methodologies for clarifying moral values. A method using Socratic dialogue between student and teacher is proposed to enable young people to clarify their ethical positions and to justify their viewpoint. 6 stages of moral development are outlined: punishment-obedience, relative satisfaction, interpersonal accord, "law and order," legal social contract, and universal ethical principles. Autonomous morality seems to develop between ages 12-16, but is related to cultural values, individual intelligence, and religious affiliation. V. Frankl and R. Assagioli are favorably cited as recognizing a nosological dimension of personality which is different from biological and psychological factors. (59 ref)—*K. J. Hartman.*

12025. Mahler, Margaret S. (Albert Einstein Coll of Medicine, Masters Children's Ctr, Yeshiva U) **Symbiosis and individuation: The psychological birth of the human infant.** *Psychoanalytic Study of the Child*, 1974, Vol 29, 89-106. Argues that the psychological birth of the normal human infant occurs when the toddler achieves a

premature concept of himself as a separate individual following a period of psychological oneness with the mother. Implications for the appearance of psychosis and other psychopathology as a result of failures in this developmental process are considered. (27 ref)

12026. McEachern, Lilly V. (U Illinois) **An investigation of the relationships between self-esteem, the power motives, and democratic, authoritarian, or laissez-faire home atmosphere.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5724.

12027. Moessinger, Pierre. (U Genève, Faculté des Sciences économiques et sociales, Switzerland) **[Developmental study of exchange and bargaining.]** (Fren) *Cahiers de Psychologie*, 1974, Vol 17(2), 119-124.—Observed children's behavior in the exchange of electric cars and the batteries needed to make the cars run. 60 Ss were paired within age groups 4-6, 7-10, and 12-15 yrs. One child was given 3 cars without batteries, the other, 3 batteries. In the youngest group, the exchange consisted chiefly of giving and taking, with little regard for inequality of gain or correspondence of the result to expressed preferences. 7-12 yr old Ss appeared to exhibit a cooperative strategy, some behaving as if the unequal result had in some measure modified their attitude toward the toys. The child ending up with only 1 functioning car, for example, might say he did not care much for playing with cars. These children did not seem to comprehend the leverage each had against the other, even when the E suggested one could break off the exchange. In contrast, some Ss in the oldest group showed an understanding of the extortion principle, proposing a 2 for 1 exchange and threatening to stop bargaining. However, none carried out the threat. (English abstract)—E. Brown.

12028. Moore, Shirley G. & Bulbulian, K. Naomi. (U Minnesota, Inst of Child Development) **The effects of contrasting styles of adult-child interaction on children's curiosity.** *Developmental Psychology*, 1976(Mar), Vol 12(2), 171-172. Data from 40 nursery school children show that Ss in the presence of an aloof, critical adult were less likely to display incidental task-related curiosity and exploratory behavior, had longer latencies before beginning to explore, and were less inclined to venture guesses as to the identity of objects than Ss in the presence of a friendly, supportive adult.

12029. Moriarty, Alice E. & Toussie, Poyl W. (Menninger Foundation, Topeka, KS) **Adolescence in a time of transition.** *Bulletin of the Menninger Clinic*, 1975(Sep), Vol 39(5), 391-408. Presents conclusions based on a longitudinal study of 54 adolescent Ss. In the past, the adolescent was preparing for an established society, and the concept of "adjustment" was important, but the adolescent of today, preparing for life in a constantly changing world, must place more emphasis on himself. His task becomes one of coping, which emphasizes internal balance and lacks the aspects of concession implied by "adjustment." Coping implies realistic perception and awareness, with a minimum of ideological restriction and distortion. Adolescents can be divided into 2 groups: sensors and censors. Sensors stubbornly rely on, develop, and sharpen their senses in order to see the world and their lives as accurately as possible and eventually come to an overall picture of what is

happening. Censors rely on the traditional views handed down to them. In order not to be confused by a changing world, they place their senses at the service of the views they have inherited and, thus, always interpret reality before they deal with it. (27 ref)—J. Z. Elias.

12030. Morrison, James K. (State U New York, Albany) **A developmental study of moral judgment as person perception.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5201-5202.

12031. Murphy, Lois B. & Moriarty, Alice E. (Children's Hosp, Washington, DC) **Vulnerability, coping and growth from infancy to adolescence.** New Haven, CT: Yale U Press, 1976. xxiii, 460 p. \$20.—Describes how a group of children, observed at the Menninger Foundation from birth through adolescence, attempted to deal with internal and external stresses, and how the stress often promoted growth. Medical, psychological, and psychiatric data regarding the group are presented and analyzed.

12032. Ohsako, Toshio. (Michigan State U) **Race awareness in eight, ten, and twelve year old boys.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1508.

12033. Perron, R. (Fondation Vallée, Lab d'Etude Génétique de la Personnalité, Gentilly, France) **[Elaborations of narrative responses to the DPI (Dynamic Persons and Images) Test: The organization of the human universe.]** (Fren) *Revue de Psychologie Appliquée*, 1975, Vol 25(3), 149-187.—Continues a previous article (see PA, Vol 55:Issue 6) on clinical utilization of R. Perron's projective test. Refinements are reported in research on how children 5-14 yrs old identify with literary heroes. Findings tend to support Freudian concepts of the stages of psychosexual development.—K. J. Hartman.

12035. Sagl, Abraham & Hoffman, Martin L. (U Michigan) **Empathic distress in the newborn.** *Developmental Psychology*, 1976(Mar), Vol 12(2), 175-176.—A study with 34-hr-old infants replicated previous findings with 70-hr-old Ss which show that infants cry to the sound of another newborn's cry and that the cry is a response to the vocal properties of the other's cry. Ss exposed to the newborn cry cried significantly more often than those exposed to silence and those exposed to a synthetic newborn cry of the same intensity.

12036. Sameroff, Arnold. (U Rochester) **Transactional models in early social relations.** *Human Development*, 1975, Vol 18(1-2), 68-79. Maintains that predictions of developmental outcomes based on early assessments of the child have proven inadequate. Development consists of a series of stage-like restructurings of behavior as the child advances through life. Continuities in exceptional behavior generally do not bridge these stages unless those exceptional behaviors are maintained by an exceptional caretaking environment. Such exceptional caretaking can be related to a mother's cognitive inability to make developmental sense of the behavior of her child. A sequence of negative transactions can be started when an infant is seen as being abnormal either through his history, appearance, or behavior. The parent

who makes this concrete attribution will treat the child in such a way as to create a self-fulfilling prophecy. Research must be directed at the variety of ways that parental levels of cognizing influence their perceptions of their offspring, which perceptions in turn influence their behavior toward their offspring. Dialectical interpretations offer a new tool for understanding the contradictions that motivate cognitive change. (29 ref)—*Journal abstract*.

12045. Britt, David W. & Tittle, Charles R. (Florida Atlantic U) **Crime rates and police behavior: A test of two hypotheses.** *Social Forces*, 1975(Dec), Vol 54(2),

441-451.—Analyzed the relationship of arrest rates for serious and minor crimes to test 2 contrasting hypotheses about police conduct: (a) the displacement hypothesis which suggests an inverse relationship between arrest for serious crimes and arrest for minor crimes and (b) the dragnet hypothesis which postulates a positive relationship between serious and minor arrests. Data were obtained from 1971 and 1972 arrest statistics in 261 Florida municipalities. Results of a regression analysis using lagged variables in a system of difference equations support a dragnet interpretation of police behavior (i.e., that when police are constrained by legal rules and other contingencies they must rely largely on arrests for minor crimes as a means of managing serious offenses) and discount the displacement hypothesis. Data also indicate that the relationship between arrest rates and minor and major offenses achieves stability over time. (21 ref)—*Journal abstract*.

12046. Campbell, Donald T. (Northwestern U) **On the conflicts between biological and social evolution and between psychology and moral tradition.** *American Psychologist*, 1975(Dec), Vol 30(12), 1103-1126.—Reports the APA Presidential address delivered at the Chicago convention, August 1975. Urban humanity is considered as a product of both biological and social evolution. Evolutionary genetics shows that when there is genetic competition among the cooperators (as for humans but not for the social insects), great limitations are placed upon the degree of socially useful, individually self-sacrificial altruism that biological evolution can produce. Human urban social complexity is a product of social evolution and has had to counter with inhibitory moral norms the biological selfishness which genetic competition has continually selected. Because the issues are so complex and the available data are so un compelling, all of this should be interpreted more as a challenge to an important new area for psychological research than as established conclusions. It is emphasized, however, that these are important issues to which psychology should give much greater attention, and that scientific reasons exist for believing that there can be profound system wisdom in the belief systems our social tradition has provided us with. (3½ p ref)—*Author abstract*.

12047. Covell, William D. (U Florida) **A value profile of American college students of the nineteen-sixties.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 6995.

12048. Denzau, Arthur T. (Washington U, St Louis) **Majority voting and general economic equilibrium: A synthesis.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7451.

12049. Feather, Norman T. (Flinders U, Australia) **Values in education and society.** New York, NY: Free Press, 1975. xi, 350 p. \$14.95.—Discusses educational, societal, and cross-cultural value systems; value differences between age, sex, and income groups; and values of special groups (e.g., student activists, juvenile offenders, and immigrants); and emphasizes particularly the "ecology of values"—how different value systems interact with each other.

12050. Fleischman, William A. (Iowa State U) **Social intervention and audience delineation: An application of**

multiple discriminant function analysis. *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6759.

12051. Gregory, C. Jane. (U Western Ontario, London, Canada) **Changes in superstitious beliefs among college women.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 939-944.—348 university students responded to a mailed questionnaire concerning Ss' belief in superstition. Results show that females held more superstitions than males. Today's beliefs seem less concerned with deterministic viewpoints of life, animistic roles of nature, and supernatural happenings, but more inclined towards personal manifestations. Although comparisons with other studies over a 50-yr interval suggested changes in strengths of support for these beliefs, the inclusion and endorsement of sport by females best exemplified the changing nature of superstition in society. It appears that the school rather than home environment provides the source for these beliefs. (16 ref)—*Journal abstract*.

12054. Horowitz, Irving L. & Katz, James E. (Rutgers State U) **Social science and public policy in the United States.** New York, NY: Praeger, 1975. xiv, 187 p. \$5.95.—Examines universal problems faced by social science in relationship to public policy, emphasizing problems of openness, publicity, legitimization, reward, the work ambiance, funding, information dissemination, and implementation of policies. Trend data, case study materials, and ethnographic reports are used to examine attitudes of policy makers toward social scientists and vice versa.

12055. Hummel, Ralph P. (John Jay Coll of Criminal Justice, City U New York) **Psychology of charismatic followers.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 759-770.—Posits that an operational psychological definition of charisma is possible on the basis of Freud's projection theory. This shows that (a) the social sources of charisma lie in object loss, (b) the intense love of the follower for the leader is the result of projection, and (c) the experience of the leader's qualities as uncanny is the result of the follower's inability to make his conscious aware of the unconsciously undertaken projection. Three cases are examined: those of the followers of pre-Exile Judaic prophets, of Jesus, and of Adolf Hitler. (17 ref)—*Journal abstract*.

12061. Miale, Florence R. & Selzer, Michael. **The Nuremberg mind: The psychology of the Nazi leaders.** New York, NY: Quadrangle, 1976. xiv, 302 p. \$10.95.—Analyzes in detail the responses to the Rorschach of 16 Nazi leaders tried at Nuremberg, with a briefer report on the Rorschach of A. Eichmann. The contention of a few psychologists that the central Nazi leadership was composed of "normal, ordinary people" is strongly disputed.

12062. Newman, Graeme R. (State U New York, Albany) **Toward a transnational classification of crime and deviance.** *Journal of Cross-Cultural Psychology*, 1975(Sep), Vol 6(3), 297-315.—Constructed a Norm Resistance Scale to measure 4 main aspects of deviance perception: the respondent's definition of the act as criminal or deviant, the intensity of the respondent's reaction, his preferences for official societal sanctions, and his general opinion concerning decriminalization. The scale was administered to urban and rural samples from 5 countries selected to represent a diverse array of political, social, economic, and cultural factors ($N = 1,848$). Evidence was found for general agreement concerning the extent to which the control of a wide variety of deviant acts might be resisted. However, when cross-cultural comparisons were made for specific acts, wide differences were found both across countries and within countries, and the cross-country differences were the greater. Factor analysis was used to investigate similarity in underlying structure of deviance perception across countries. Although data are not conclusive, they suggest that 2 important factors, deviance protest and moral indignation, were operating on differing levels across all countries. (17 ref)—*Journal abstract*.

12063. Petersen, Karen K. & Dutton, Jeffrey E. (American U) **Centrality, extremity, intensity: Neglected variables in research on attitude-behavior consistency.** *Social Forces*, 1975(Dec), Vol 54(2), 393-414.—A review of 28 recent reports of research on the attitude-behavior relationship indicates a consistent neglect of theoretical formulations specifying the relevance of object centrality, attitude extremity, and attitude intensity for understanding attitude-behavior consistency. Yet, bits and pieces of relevant data gleaned from these reports plus the results of a secondary analysis of data gathered in 1969-1970 from some 19,000 members of the 1966 cohort of college freshmen point clearly to the

conclusion that these variable properties of attitude merit most careful consideration in attitude-behavior research. They suggest that the failure of past empirical investigations to support the assumption, central to the work of many scholars and practitioners, that attitudes are important keys to understanding behavior may be due to this gap between research and theory. (3 p ref)—*Journal abstract*.

12064. Pettigrew, Thomas. (Harvard U) **The cold structural inducements to integration.** *Urban Review*, 1975(Sum), Vol 8(2), 137-144.—Proposes 5 political and 8 educational conditions which might produce an increase in well-being among Black Americans greater than the limited increase that took place between 1954 and 1974. School desegregation and integration are distinguished, and it is suggested that the latter would be enhanced by (a) racial equality in access to the physical and social resources of the schools, (b) classroom desegregation, (c) abolition of nonflexible ability grouping, (d) adequate school services and remedial training, (e) commencement of desegregation in early grades, (f) interracial staffs, (g) substantial percentages of Blacks within institutions, and (h) distinguishing between issues of race and class through enrollment of both middle- and working-class Blacks as well as Whites.—*B. M. Anthony*.

12065. Sullivan, James P. (Wayne State U) **The effects of subsidized housing on Black families of low and moderate income.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7473-7474.

12068. Williams, Thomas R. (Ed). **Socialization and communication in primary groups.** The Hague, Netherlands: Mouton Publishers, 1975. xi, 469 p. \$24.50.—Presents papers dealing with (a) various features of the socialization process, (b) selected aspects of the process of communication, and (c) the human individual as a locus of culture. The thesis is developed that "culture" springs from a continuous interaction between forces within the individual and social forces external to him.

12069. Zaidi, S. M. (U Karachi, Pakistan) **Psychology in the service of the nation.** *Pakistan Journal of Psychology*, 1975(Jun), Vol 8(1-2), 3-24.—Surveys research areas in which psychologists' recommendations can be profitably used for national development in Pakistan. An understanding of 4 areas is emphasized as central for psychological research: (a) cultural orientation, (b) value orientation, (c) child-rearing techniques, and (d) national stereotypes. Some of the research findings in these areas are discussed. Religiousness, authoritarianism, and traditionalism are noted to be dominant features of Pakistani character and culture. Similarly, in child rearing, obedience is identified as the important target and the use of negative incentive is the dominant technique. Studies of stereotypes reveal that Pakistanis consider themselves religious, simple, and

peace-loving, but Indians are seen most unfavorably. (17 ref)—*M. Akhtar*

12071. Bond, Michael H.; Nakazato, Hiroaki & Shiraishi, Daisuke. (Chinese U, Hong Kong) **Universality and distinctiveness in dimensions of Japanese person perception.** *Journal of Cross-Cultural Psychology*, 1975(Sep), Vol 6(3), 346-357.—Assessed dimensions of Japanese person perception, using W. I. Norman's (1963) method and stimulus materials. These dimensions were then compared statistically with results from similar studies involving Ss from the US and the Philippines. 91 Japanese undergraduates and students from the US grouped the same behaviors into the 5 factors of extraversion, good-naturedness, conscientiousness, emotional stability, and culture. For all 3 populations, the same behavior descriptions were grouped together to form the high variance dimensions of extraversion, good-naturedness, and conscientiousness. The factors of emotional stability and culture, however, appear to be construed in culturally specific ways. Differences in the relative strength of the 1st 3 factors across the 3 cultures are discussed, with the prominence of the extraversion factor in Japan being related to the importance of relative status in Japanese society.—*Journal abstract*.

12072. Buff, Stephen A. (Northwestern U) **Labeling, teenage careers and adult socialization among White working class youth.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 2), 6118.

12081. Neumann, Charles P. **Success today: Achievement without happiness.** *Psychosomatics*, 1975, Vol 16(3), 103-106.—Expresses concern that the human being as an individual may be facing extinction in our society where success is the prime goal of life and is measured only in terms of position, prestige, and money. Big business and mass production are losing sight of inventive and creative individuals. The success of "Mr. Executive" in a corporate environment depends on hard work, meeting and beating the competition, and he ultimately follows the "success" path of more cars, more houses, and suburban living. He is not allowed to express his individuality by admitting any weaknesses or differences, and by his 5th decade his achievement is without happiness.—A. S. Kulkarni.

12082. Otto, Luther B. (U Wisconsin) **Earlier career alienation and socioeconomic attainments of a rural population.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6747.

12083. Rooney, James F. (Catholic U of America, School of Social Services) **Friendship and disaffiliation among the skid row population.** *Journal of Gerontology*, 1976(Jan), Vol 31(1), 82-88.—Personal relationships of skid row men have been described in terms of disaffiliation and replacement of friends. Analysis of social relationships of 304 skid row residents (mean age, 54-55 yrs) upheld the theory of replacement. There was, however, a decline in the number of friends reported after age 70, which generally coincided with 20 yrs residence in the area. The loss of relationships was more closely associated with length of residence than with age. Qualitative measures of personal relationships indicate no major association between sociability and length of

residence but a small association with advancing age. The proportions of friendless men desiring either friends or casual acquaintances were not related to either age or length of residence. Findings fail to uphold the disaffiliation hypothesis of aging and run counter to the postulate of loss of need for meaningful personal relationships with increased exposure to the life of an outcast. 12085. Singh, Sheo N. (Magadh U, Inst of Behavioural Sciences, Bodh Gaya, India) **Caste-differences and adjustment problems.** *Psychologia*, 1975(Sep), Vol 18(3), 134-141.—Examined differences in adjustment problems due to the social caste system in India in 591 urban, 199 semi-urban, and 148 rural 9-14 yr old Indian males. Ss were administered a Hindi version of Mooney's Problem Checklist. Caste-wise analysis on all the 7 areas of adjustment reveals that urban Ss were less prone to differential caste-influences and prejudices and, thus, there was practically no significant difference in mean problems of adjustment for different caste-comparisons. In semi-urban and rural areas the same trend was observed. It seems that in urban and rural areas of India the caste-restrictions are losing their grip and social distance is being reduced. 12096. Berlyne, D. E. (U Toronto, Canada) **Extension to Indian subjects of a study of exploratory and verbal responses to visual patterns.** *Journal of Cross-Cultural Psychology*, 1975(Sep), Vol 6(3), 316-330.—Used procedures previously carried out with Ugandan and Canadian Ss in a study by D. Berlyne et al (1974) to study the responses of 30 illiterate Indian villagers (age range, 20-45) and 30 Indian undergraduates. The stimulus material consisted of line drawings sampling a number of complexity and incongruity variables. The procedures involved (a) recording of looking time, (b) paired-comparison preference, and (c) ratings on 7 scales. Although there were differences among groups of Ss, there were also similarities, which in some cases were quite striking. In all groups, Ss, particularly urban individuals, tended to look longer at the more complex and incongruous patterns. Findings suggest that assessments of exploratory behavior and other measures of interest to experimental aesthetics have some cross-cultural validity.—*Journal abstract.*

(U California, Berkeley) **Adolescent prejudice.** New York, NY: Harper & Row, 1975. xviii, 229 p. \$12.50.—Examines the belief that interreligious and interracial contact breaks down prejudices and religious and racial stereotypes, creates opportunities for friendship across religious and racial lines, and generates norms of tolerance. However, data from American 8th, 10th, and 12th graders and their teachers show that both racial prejudice and antisemitism are rampant in these age groups. Causes, solutions, and implications for educators are discussed.

12100. Hunsberger, Bruce E. (U Manitoba, Winnipeg, Canada) **Religious denomination, education, and university students' reported agreement with parents'**

religious beliefs. *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 7329.

12101. Johnson, Colleen L. & Johnson, Frank A. (Syracuse U) **Interaction rules and ethnicity: The Japanese and Caucasians in Honolulu.** *Social Forces*, 1975(Dec), Vol 54(2), 452-466.—Notes that the concept of ethnicity has traditionally embraced varying customs, structures, languages, attitudes, histories, and ideologies. More recently, ethnic identification has been studied as it sets boundaries between diverse subcultures. This report examines ethnicity as a function of distinctive interaction rules in encounters both within and outside the Japanese-American community in Hawaii. Semi-structured interviews were conducted with mothers in 104 families and 50 informants about the normative and behavioral content of relationships within their social networks. Cost and reward criteria derived from exchange theory are related to interaction rules in an effort to account for dissonance in inter-ethnic communication. (2% ref)—*Journal abstract.*

12102. Jones, Joseph A. (U Maryland) **The effects of subculture upon the aggressive behavior of Black college athletes under stress.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 7026-7027.

12103. Klippel, Margot D. (U Auckland, New Zealand) **Measurement of intelligence among three New Zealand ethnic groups.** *Journal of Cross-Cultural Psychology*, 1975(Sep), Vol 6(3), 365-376.—Administered a battery of intelligence tests, consisting of both psychometric and Piagetian instruments, to 60 5-yr-old children from 3 New Zealand ethnic groups—Maori, Samoan, and Pakeha—within 1 mo of their commencing school. Maoris and Samoans are members of the Polynesian race, while Pakehas are persons of predominantly European descent. In general there were few significant differences between the groups, except on some subtests involving expressive language. It appeared that the sex variable confounded patterns of performances, with the Polynesian male groups generally performing at a higher (but not necessarily significant) level than the Polynesian female groups, and the Pakeha groups showing a reverse pattern of female superiority. The low intercorrelations of the tests suggested a wide variety of skills being sampled. (21 ref)—*Journal abstract.*

12104. Kutner, Nancy G. (Emory U) **Alternative implications of job-based coracism for Black voluntary association involvement.** *Journal of Vocational Behavior*, 1975(Dec), Vol 7(3), 337-344.—Examined J. C. Ross and R. H. Wheeler's (1971) hypothesis that "the greater the coracism, the greater the voluntary association membership" and that a relationship between coracism and association joining exists only among white-collar workers. In the present study, data on job-based coracism (the presence of Black coworkers and superiors) was obtained from 234 female heads of households during a survey of living patterns among 501 disadvantaged Black families in Texas. Analysis showed that job-based coracism was inversely related to Ss' voluntary association joining. Although this finding contradicts the hypothesized direct relationship between these variables, Ross and Wheeler's data from their Florida study also did not consistently support their hypothesis. Possible interpretations are offered, includ-

ing the view that joining may be compensatory for Black workers who lack coracialism.—*Journal abstract.*

12105. Lewis, Bob D. (William Carey Coll) **Birth order and religiosity.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 809-810.—The hypothesis that, because of their high need affiliation, dependency, and conformity, firstborns would be more religious than later-born individuals was not supported in a study with students from a church-affiliated college. The homogeneity of the Ss was a critical factor.

12106. Montgomery, Sallie M. & Montgomery, Robert L. (U Missouri, Rolla) **Religious practice and orthodoxy among Catholic students as a function of parents' beliefs and religious training.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 706.—Questionnaire results in a random sample of Catholic college students suggest a strong familial influence upon religious beliefs and behaviors among these Ss.

12107. Rogers, Susan K. & Ross, Abraham S. (U Toronto, Scarborough Coll, Canada) **A cross-cultural test of the Maluma-Takete phenomenon.** *Perception*, 1975, Vol 4(1), 105-106.—Individuals of the Songe tribe of the Northern District of Papua New Guinea did not correctly identify the abstract line figures of the Maluma-Takete test, indicating that the expressive characteristics of the figures are not universal.

12108. Sanada, Takaaki & Norbeck, Edward. (Shizuoka U, Japan) **Prophecy continues to fail: A Japanese sect.** *Journal of Cross-Cultural Psychology*, 1975(Sep), Vol 6(3), 331-345.—Describes a Japanese sect headed by a prophet-founder and the reactions of both its members and the prophet when an earthquake prophesied by him in 1974 failed to materialize. The prophet unsuccessfully attempted to commit suicide and later disbanded the sect. The Japanese circumstances are compared with accounts of similar cases of unfulfilled prophecies in the US which are reported to have led to greater faith among the prophets' followers, a reaction that has been interpreted on the basis of a theory of cognitive dissonance. Similarities and differences in the Japanese and US cases are noted, and suggestions are made for adapting the original formulation of interpretive theory for application to non-US cases and general cross-cultural use.—*Journal abstract.*

12109. Sheils, Dean. (U Wisconsin, Lacrosse) **Toward a unified theory of ancestor worship: A cross-cultural study.** *Social Forces*, 1975(Dec), Vol 54(2), 427-440.—Examined the antecedents of ancestor worship both as to its occurrence and type (otiose, active, or supportive ancestor worship). Data from 114 societies show that the complexity of conjugal formation and the degree of emphasis on tracing descent through one parental line affect the degree to which the ancestors are believed to be active in human life. Marriage & Family

12116. Andonov, Nikola B. (California School of Professional Psychology, Los Angeles) **Differential humor response by two generations.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5159-5160.

12117. Board of Cooperative Educational Services of Nassau County. (Salisbury Ctr, Westbury, NY) **While you're at it: 200 ways to help children learn.** Reston, VA: Prentice-Hall, 1976. xi, 223 p.—Presents a collection of games, activities, and suggestions for keeping preschool children of all cultural backgrounds busy and happy by learning while their parents or teachers perform everyday tasks.

12118. Cleveland, William P. & Gianturco, Daniel T. (Duke U Medical Ctr, Ctr for the Study of Aging & Human Development) **Remarriage probability after widowhood: A retrospective method.** *Journal of Gerontology*, 1976(Jan), Vol 31(1), 99-103.—Reports on a technique which utilized North Carolina marriage certificates plus information from the 1970 US Census. Data show that remarriage probabilities are very high for persons widowed before age 35 and decrease faster for widows than widowers. Less than 25% of men widowed after age 65 ever remarry, and less than 5% of women widowed after age 55 remarry.

12119. Cole, Charles L. (Iowa State U) **Values and marital adjustment: A test of homogamy theory.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6769-6770.

12120. George, P. M.; Ebanks, G. Edward & Nobbe, Charles E. (U Western Ontario, Canada) **Role perception and performance of lower class Black men and women of Barbados and their contraceptive behaviour.** *Society & Culture*, 1974(Jul), Vol 5(2), 161-176. Studied the role perception of Black men and women with respect to their contraceptive knowledge, attitude, and practice. 630 men 18-50 yrs old and 4199 women 15-50 yrs old, all belonging to the lower and lower middle-class Black population of Barbados were interviewed. Results show that sex is no longer taboo as a topic for discussion by couples. Joint responsibility in making contraceptive

decisions is widely recognized by both men and women. These results are at variance with the traditional portrayal of a lower-class Black family in the West Indies. It is concluded that it is time to change the image of the Black family in line with the changes which are taking place in it.—A. D. Horowitz.

12121. Hanley, Donald F. (United States International U) **Changes in parent attitudes related to a parent effectiveness training and a family enrichment program.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 7044.

12122. Howard, Marion. **Only human: Teenage pregnancy and parenthood.** New York, NY: Seabury, 1976. 261 p. \$8.95.—Follows 3 fictional sets of young parents through the discovery of pregnancy and the 1st yr of the child's life. All aspects of the problem are considered including family reactions, decisions regarding abortion, counseling services, and prenatal care.

12123. Howell, Mary C. (Harvard Medical School) **Helping ourselves: Families and the human network.** Boston, MA: Beacon Press, 1975. xvi, 231 p. \$8.95.—Discusses changes in social policies, living styles, and other institutions that affect and are affected by families: work, child care, education, and health care. New ways are explored of relating to each other as family members to the human network of kin, friends, and neighbors and to the experts who govern much of family life.

12136. Samouilidas, Leonidas. **Marital relationships: Frustration and fulfillment.** *American Journal of Psychoanalysis*, 1975(Win), Vol 35(4), 365-375.—Discusses sources of fulfillment and frustration in marriage from the standpoint of K. Horney's holistic theory. The fulfilling marital relationship is characterized as an ongoing process which is continuously the focus of new awareness and fresh insights. Frustration and subsequent disruption are seen as occurring whenever marriage is taken for granted or experienced as stagnating. Various motives for getting married are examined, including unhappiness at home, dependency, fear of being alone, desire for children, social convenience, and the need to share experiences. An analysis of psychological processes in marriage emphasizes communication, sexual experience, mutuality, free expression of feelings, sharing, support, and independence.—J. Adams-Webber.

12137. Schiffelbein, Deana. **Cross-cultural research: What makes the difference? Menninger Perspective.** 1975(Spr), Vol 6(1), 10-11. Presents a progress report on a cross-cultural study which is examining mother-infant interaction patterns in Japanese and American societies. Investigators have focused on both the psychological relationship and the cultural mandates relating to mother-infant interactions during the early months of life. Cross-cultural comparisons are made of the circumstances associated with childbirth, the degree of mutual dependency between mother and infant (greater in Japan), and the initial feeding practices. D. H. Lamb.

12138. Strong, John R. (Iowa State U) **A marital conflict resolution model: Redefining conflict to achieve intimacy.** *Journal of Marriage & Family Counseling*, 1975(Jul), Vol 1(3), 269-276. Uses an approach to conflict resolution which redefines conflict as alternative choices. 6 assumptions about conflict are reviewed, suggesting it is the way conflicts are processed, not the conflict per se, which affects the relationship. The model is built on skills: listening, speaking, deciphering basic

needs, unlocking alternative choices, and introspection about the process. Some perspectives and principles provide a conceptual framework for use of the 7 sequential procedures. Effectively processed conflicts are considered to result in greater personal and relationship understanding and potential for growth.—*Journal abstract.*

12140. Weller, Leonard; Natan, Orah & Hazi, Ophrah. (Bar-Ilan U, Ramat-Gan, Israel) **Birth order and marital bliss in Israel.** *Journal of Marriage & the Family*, 1974(Nov), Vol 36(4), 794-797.—Based on the qualities of the firstborn and on the research literature, rankings were made of the following birth order combinations in terms of successful marriages: (1) Firstborn (FB) husband (h), later born (LB) wife (w); (2) LB (h), FB (w); (3) middle born (MB) (h) or MB (w) with any other; (4) only child (OC) of either sex with (FB); (5) FB (h), FB (w); (6) LB (h), LB (w); (7) OC (h), OC (w). 236 women of Tel-Aviv, Israel, completed a questionnaire of adjustment to marital life. While the results closely approximated the rank order, the 1st 3 combinations are characterized as high, the 4th as medium, and the last 3 as low, marital adjustment.—*Journal abstract.*

12141. Wolfe, Barbara L. (U Pennsylvania) **A socio-economic analysis of family building behavior.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(9-A, Pt 1), 7422-7423.

Political & Legal Processes

12142. Bayés, Ramón. [Experimental psychology and juridical efficiency.] (Span) *Anuario de Sociología y Psicología Jurídicas*, 1974, 51-62. Discusses application of behavioral science to jurisprudence. Relevant literature in science, psychology, and law is reviewed. The following conclusions are expressed: (a) The objectives of law are control and modification of specific behaviors. (b) All behavior is learned and control is dependent on knowledge of laws, of relevant variables, and of the possibility of manipulation. (c) Laws of learning exist, whether or not they are accepted. (d) Judicial errors would be decreased by using the scientific method. (e) Psychological studies, of a strictly experimental nature, should be undertaken along with liberal arts studies. (f) Law courses ought to include systematic studies in psychology. (31 ref)—*D. R. Marina.*

12143. Bishop, George F. (Michigan State U) **Socio-economic status consistency and political behavior-attitude consistency.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 2), 6102.

12144. Brownstein, Charles N. (Florida State U) **The effect of media, message, and interpersonal influence on the perception of political figures.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 2), 6059.

12145. Coffey, Alan; Eldefonso, Edward & Hartinger, Walter. (San Jose State U) **Human relations: Law enforcement in a changing community.** (2nd ed). Englewood Cliffs, NJ: Prentice-Hall, 1976. xiii, 380 p.—Examines the history, causes, problems, and current

and possible solutions to police-community tensions and strife. Reasons for a poor police image, sociological changes, minority groups and equal justice, and psychological factors involved in the growth of tension are among the subjects given special attention.

12146. Cohen, Roberta S. (U Illinois) **Analysis of familial effects in the political socialization of Black and White youth.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7885.

12147. de Mesquita, Bruce B. (U Rochester) **Strategy, risk and personality in coalition politics.** New York, NY: Cambridge U Press, 1976. ix, 198 p. \$17.50.—Proposes a new theory of behavior in coalitions and applies it to political party coalitions in India, 1967-1971. The behavior of the 6 all-India parties in 7 Indian states, and the role of regional parties and defector groups, are statistically examined. Major findings deal with party size, cooperation, and leadership in coalitions.

12148. Edwards, George C. (U Wisconsin) **Presidential influence in Congress: Presidential prestige as a source of presidential power.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7833.

12149. Efthim, Helen. **Pontiac desegregation: Myth and reality.** *Urban Review*, 1975(Sum), Vol 8(2), 155-159.—Challenges the belief that working class Whites have especially negative attitudes towards Blacks by describing the behavior and attitudes of citizens of Pontiac, Michigan (parents, students, and teachers) in the 3 yrs after court-ordered public-school desegregation. In spite of strong initial antibusing demonstrations, curtailed school budgets, and high unemployment in a city whose working force is chiefly skilled and unskilled manual labor, many favorable developments are reported. Court orders that administrative, faculty, and classroom ratios should reflect the community structure have resulted in more equality of decision-making and in better interpersonal relationships among students. The importance of federal funds and guidelines used to increase effectiveness of teaching and of school-community relations is discussed.—*B. M. Anthony.*

12163. Henze, Laur F. & Hudson, John W. (Arizona State U) **Personal and family characteristics of cohabiting and noncohabiting college students.** *Journal of Marriage & the Family*, 1974(Nov), Vol 36(4), 722-726.—Studied the phenomenon of cohabitation among college students and focused on characteristics of students who have cohabited in comparison with those who have not. Data were gathered in interviews with a random sample of 291 students at a university in 1971-1972 and indicated that 29% of the males and 18% of the females were currently cohabiting or had cohabited. Family characteristics examined failed to differentiate between cohabiters and noncohabiters. Person characteristics which tended to distinguish the 2 groups were in the areas of religion, life-style, and drug use. Cohabiters were less apt to attend church, were more likely to identify with a liberal life-style, and were more apt to be drug users.—*Journal abstract*.

12164. Houseman, Jerry P. (University of the Pacific) **A study of selected Walt Disney screenplays and films and the stereotyping of the role of the female.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7466.

12165. Iverson, Sonya R. (U Maryland) **Sex education and adolescent attitudes.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7584-7585.

12166. Jederman, Jean E. (Northern Illinois U) **The sexual stereotype of women in children's literature.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 6944.

12167. Lasky, Ella (Ed). (Borough of Manhattan Community Coll, City U New York) **Humanness: An exploration into the mythologies about women and men.** New York, NY: MSS Information, 1975. 543 p. \$13.75.—Presents a group of readings on sex-role stereotyping, with the underlying thesis that these stereotypes make half-people of American men and women alike. Individual chapters deal with the development of sexual identity in childhood and adolescence, variations in sexuality, prostitution, marriage, sex stereotypes of Black and Latin women, of men and of older women, and the relationship of sex role to mental health.

12168. McClellan, Elizabeth H. (U Michigan) **Women's roles and careers: Conflict, compromise, or fulfillment.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5637.

12169. Orcutt, James D. (Florida State U) **The impact of student activism on attitudes toward the female sex role: Longitudinal and cross-sectional perspectives.** *Social Forces*, 1975(Dec), Vol 54(2), 382-392.—A 1973 readministration to 1,096 undergraduates of sex-role items used by K. Kammeyer in 1961 showed dramatic shift away from traditional attitudes toward the female sex role among college women. Cross-sectional analyses of 1973 data on both sexes showed that attitudes toward the female sex role were significantly related to personal participation in protest activities. The greater strength of this relationship among women than among men appears

to support previous discussions of the special impact of feminist activism on the attitudes of college women. —*Journal abstract.*

12172. Robinson, Paul. **The modernization of sex: Havelock Ellis, Alfred Kinsey, William Masters and Virginia Johnson.** New York, NY: Harper & Row, 1976. viii, 200 p. \$8.95.—Examines the assumptions, biases, tensions, and modes of thinking that characterize the work of the 4 most influential sexual thinkers of this century. Special emphasis is given to their role as theoreticians.

12173. Welsch, Erwin K. (Indiana U) **Feminism in Denmark, 1850-1875.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7692.

Drug & Alcohol Usage

12174. Annis, Helen M. (Alcoholism & Drug Addiction Research Foundation of Ontario, Toronto, Canada) **Adolescent drug use: The role of peer groups and parental example.** *Ontario Psychologist*, 1975(Oct), Vol 7(4), 7-9.—Discusses 2 opposing social interpretations of the development of adolescent drug use. One stresses the role of peer groups, the other the role of parental drug use. Research is presented backing each position. It is concluded that parental practices are a primary formative factor in developing the adolescent's attitude toward drug usage and that this value base may then serve to modulate the effect exerted by peer group standards. (15 ref) *A. Krichev.*

12175. Bergman, Hans; Norlin, Berit; Borg, Stefan & Fyri, Bengt. (U Stockholm, Sweden) **Field dependence in relation to alcohol consumption: A co-twin control study.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 855-859.—20 45-65 yr old male alcohol-disorder twin pairs were compared for field-dependent cognitive style and general intelligence. Ss were given the rod-and-frame test, the Embedded Figures Test, and a general intelligence test. Results of one-sample and multivariate *t* tests show that the high alcohol group was more field-dependent ($p < .01$) than the low alcohol group, mainly because of poorer scores on the Embedded Figures Test. When general intelligence was controlled for, the amount of embedded-figures variance accounted for by consumption of alcohol dropped considerably. (16 ref) —*Journal abstract.*

12176. Hamburg, Beatrix A.; Kraemer, Helena C. & Jahnke, William. (Stanford U. Medical Ctr) **A hierarchy of drug use in adolescence: Behavioral and attitudinal correlates of substantial drug use.** *American Journal of Psychiatry*, 1975(Nov), Vol 132(11), 1155-1163.—Studied drug use in 193 suburban junior and senior high school students. High levels of drug use overall and a substantial amount of drug involvement among junior high school students were found. Results also show that drugs

were used in clusters, that there was a distinctive age-related pattern of drug use, and the progressive-step theory of drug use was not confirmed. A number of behavioral and attitudinal variables correlated with a tendency toward a high level of drug use. Implications of findings include the need for targeted drug education and prevention programs and a differentiated approach to the study of drug use among adolescents. (17 ref) —*Journal abstract.*

12177. Higgins, Raymond L. (U Wisconsin) **The manipulation of interpersonal evaluation anxiety and situational control as determinants of alcohol consumption in college social drinkers.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5194.

12178. Kandel, Denise. (New York State Dept of Mental Hygiene, Biometrics Research, New York) **Reaching the hard-to-reach: Illicit drug use among high school absentees.** *Addictive Diseases: An International Journal*, 1975, Vol 1(4), 465-480.—As part of a large-scale survey of adolescent drug use in New York State, 2 absentee studies were carried out to estimate levels of drug use among school absentees. 61 (of 117) students interviewed in households reported very little drug use. By contrast, 44 (out of 238) absentees self-selecting themselves to participate in a group-administered questionnaire reported much higher illicit drug use than a group of 190 regular students from the same schools. However, comparison of students in the absentees sample with the total target absentee population, and the reverse association between drug use and selected background factors among absentees, suggest that most chronic absentees and heavy users, especially Blacks and males, did not participate in the self-selected absentee sample. Attempts to identify factors related to higher drug use among absentees were unsuccessful. While poor school performance brought levels of illicit drug use among regular students to levels comparable to those of the absentees, poor school performance per se did not explain the higher rates of illicit drug use among the absentees. (16 ref) —*Journal abstract.*

12179. Kandel, Denise. (New York State Psychiatric Inst, Biometrics Research, New York) **Stages in adolescent involvement in drug use.** *Science*, 1975(Nov), Vol 190(4217), 912-914.—Two longitudinal surveys based on random samples of high school students ($N_s = 5,468$ and 985) in New York State suggested the existence of 4 stages in the sequence of involvement with drugs: beer or wine, or both; cigarettes or hard liquor; marijuana; and other illicit drugs. The legal drugs appear to be necessary intermediates between nonuse and marijuana. Whereas 27% of the Ss who smoked or drank progressed to marijuana within a 5- to 6-mo follow-up period, only 2% of those who had not used any legal substance did so. Marijuana, in turn, was a crucial step on the way to other illicit drugs. While 26% of marijuana users progressed to LSD, amphetamines, or heroin, only 1% of non-drug, marijuana users and 4% of legal drug users did so. This sequence was found in each of the 4 yrs in high school and in the year after graduation. The reverse sequence held for regression in drug use. —*Journal abstract.*

(Fairfield U, Inst for Human Development) **How generalized are the public's perceptions of a prominent political figure who is an acknowledged alcoholic.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 959-967.—The patterns of intercorrelations on 15 semantic differential scales, calling for the rating of Representative Wilbur D. Mills as a person, and on 6 variables on an Attitude Toward Alcoholism Instrument were determined for 139 Ss in 5 groups: male and female graduate students, male and female members of Alcoholics Anonymous, and members of the League of Women Voters. Results indicate that the degree of generality in ratings was dependent on the particular rating group employed. The League members disclosed the greatest degree of scale-specific judgments, whereas the female recovering alcoholics showed the most generalized judgments. These differences could be a function of the highly discerning problem-solving style of the League members and the defensive posture of the recovering alcoholics in dealing with a sensitive and emotionally laden area.—*Journal abstract*.

12193. Fiedler, Peter A. & Windheuser, H. Jochen. (U Münster, Psychologischen Inst, W Germany) **[Modification of creative behavior through modeling processes.]** (Germ) *Zeitschrift für Entwicklungspsychologie und Pädagogische Psychologie*, 1974, Vol 6(4), 262-280.—Analyzed the effects of modeling processes on creative behavior. In Exp I, Ss who viewed videotapes of model displaying and creative behavior scored higher on creativity than control Ss. If the film model verbally reinforced experimental Ss, they scored even higher; there were no differences between control Ss and Ss watching a soundless film. Exp II replicated Exp I, using written rather than oral instructions, with the same results. Findings are discussed in terms of analyses of modeling processes and of modification of creative behavior. (English summary) (36 ref)—*R. Scott*.
12194. Geen, Russell G. (U Missouri, Columbia) **The meaning of observed violence: Real vs. fictional violence and consequent effects on aggression and emotional arousal.** *Journal of Research in Personality*, 1975(Dec), Vol 9(4), 270-281.—Sixty male undergraduates were either attacked or treated neutrally by a confederate, after which each saw a videotape of 2 men fighting. Ss were informed that the fight was either real or fictitious or were given no explanation of it. Ss who had previously been attacked and had observed the fight under a set to perceive it as real were subsequently more punitive in their treatment of the confederate than Ss in all other conditions. The combination of prior attack and observation of real violence also sustained blood pressure (BP) at near the level produced by the attack, whereas BP of attacked Ss in the other conditions declined during the time the fight was observed. Palmar sweat measures revealed that observation of real violence was more arousing than observation of fictitious fighting. Results are discussed in terms of the effects that the reality of observed violence has on emotional arousal. (29 ref) *Journal abstract*.

12198. Shaffer, David R. (U Georgia) **Some effects of initial attitude importance on attitude change.** *Journal of Social Psychology*, 1975(Dec), Vol 97(2), 279-288.—40 female undergraduates were administered a battery of attitude questionnaires and were then divided into experimental and control groups. The 20 experimental Ss, holding either important or moderately important initial attitudes, wrote counterattitudinal essays to provide a test of competing predictions derived from L. A. Festinger's cognitive dissonance theory and D. J. Bem's self-perception theory. As expected by self-perception theory, Ss holding important initial attitudes showed less attitude change after counterattitudinal advocacy than did Ss holding moderately important initial attitudes. Additional data suggested that this differential attitude change was not attributable to an S-selection bias or to the production of differentially persuasive essays across the 2 importance conditions.—*Journal abstract*.

12199. Waters, Thomas J. (Searcy State Hosp, Mt Vernon, AL) **Further comparison of video tape and face-to-face interviewing.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 743-746.—Previous research has suggested strong similarity of data from the Standardized Video Tape Interview of M. Dinoff et al and face-to-face interview procedures. This hypothesis was substantiated in the present study by further analysis of the effects of S variables and their possible differential interaction with the 2 interview modes. 24 male and 24 female university students were interviewed by 2 males and 2 females; Ss were also given the State-Trait Anxiety Inventory. Although no interview mode and/or interviewer-interviewee interactions as such were found, several significant Interviewer's Sex differences were found. Ss had higher rated subjective anxiety and spoke longer when interviewed by a male and had higher GSRs when interviewed by a female.—*Journal abstract*.

12204. Bullard, Peter D. & Cook, Paul E. (Wake Forest U) **Sex and workstyle of leaders and followers: Determinants of productivity.** *Psychological Reports*,

1975(Apr), Vol 36(2), 545-546.—Investigated whether sex and work style interactions of leaders and followers affect team productivity. 168 female and 168 male undergraduates were assigned to relationship- or task-oriented groups based on scores on the Least Preferred Co-worker Scale. Groups worked on a puzzle for 30 min, and then rated group pleasantness on Fielder's Group Atmosphere scale. It was hypothesized that (a) task-oriented leaders would be the most productive, (b) followers with a same-sex leader would be the most productive, and (c) the most productive Ss would rate their teams as the most pleasant. Only the final hypothesis received some support.—*Journal abstract*.

12205. Chapanis, Alphonse. (Johns Hopkins U) **Interactive human communication.** *Scientific American*, 1975(Mar), Vol 232(3), 36-42.—Analyzes 2-person interactive communication during problem solving tasks in which several modes of communication were employed.

12206. Crosbie, Paul V.; Stitt, B. Grant & Petroni, Frank A. (Humboldt State U) **Relevance in the small groups laboratory.** *Humboldt Journal of Social Relations*, 1974(Spr-Sum), Vol 1(2), 83-88.—Studied the conformity-pressure hypothesis in smoking cessation groups to determine if conformity variables previously found effective singly would produce additive effects in combination. Four levels of conformity were created: no pressure (NP) with 12 Ss meeting individually with E; low pressure (LP) with 8 Ss meeting for discussions without commitment; medium pressure (MP) with 8 Ss meeting, as in LP, with a pledge to quit smoking added; and high pressure (HP) with 9 Ss meeting, as in MP, with additional responsibility not to let the group down in a competition for future rewards. Increased pressure to conform produced greater reduction of smoking. These findings are related to previous studies on cohesiveness in small groups. (38 ref)—*P. Babarik*.

12207. Dion, Kenneth L. (U Toronto, Canada) **Women's reactions to discrimination from members of the same or opposite sex.** *Journal of Research in Personality*, 1975(Dec), Vol 9(4), 294-306.—Explored the effects upon women's self-evaluations of experiencing varying severity of failure in interpersonal competition against male vs female opponents. Ss were 47 female undergraduates. Results support the hypothesis that self-esteem in women is more vulnerable to interpersonal rejection from men as opposed to other women. Ss reported lower self-esteem when severe failure was due to the actions of alleged male opponents rather than female ones. Also, severe failure elicited less favorable self-evaluations than mild failure only when Ss confronted male opponents. Finally, contrary to a defensive self-presentation hypothesis, Ss did not respond to discrimination from men by presenting themselves as discrepant from the stereotype of women. Instead, Ss who interpreted their failure as reflecting male prejudice evaluated themselves more favorably on positive traits underlying the female stereotype. (16 ref)—*Journal abstract*.

12209. **Eisler, Richard M.; Miller, Peter M. & Hershen, Michel.** (VA Ctr. Jackson, MS) **Components of assertive behavior.** *Journal of Clinical Psychology*, 1973(Jul), Vol 29(3), 295-299.—A series of 14 standard interpersonal situations requiring assertive responses were developed and administered to 30 21-63 yr old male psychiatric inpatients. Ss' responses to a female role model's prompts were videotaped and subsequently rated on 9 behavioral components of assertiveness. Ss who were judged to be high in assertiveness were differentiated from low assertive Ss on 5 specific behavioral measures. Assertive Ss responded to interpersonal problems quickly and in a strongly audible voice with marked intonation. Results also indicate that highly assertive individuals do not automatically accede to the demands of others and are more likely to request that the interpersonal partner change his behavior. Duration of looking at the interpersonal partner, speech fluency, and smiling do not appear to be related to judgments of assertiveness. High assertive Ss were significantly different than low assertive Ss on the Wolpe and Lazarus Assertiveness Questionnaire.—*Journal summary.*

12210. **Ellsworth, Phoebe & Ross, Lee.** (Yale U) **Intimacy in response to direct gaze.** *Journal of Experimental Social Psychology*, 1975(Nov), Vol 11(6), 592-613.—Believing that they were participating in a study of encounter groups, 100 male and 120 female undergraduates were encouraged to deliver a personally revealing monologue to a same-sex listener whose visual behavior had been "programmed" by an E. In the 4 experimental conditions, the listener provided (a) continuous direct gaze, (b) direct gaze contingent upon intimate statements, (c) continuous gaze aversion, or (d) gaze aversion contingent upon intimate statements. The intimacy of the speaker's monologue was rated by a "blind" observer, the listener, and the speaker himself. Direct gaze, whether constant or contingent, promoted intimacy between females and reticence between males, while gaze avoidance had the opposite effects. The only raters who disagreed with this assessment were the male speakers, who felt that they had been most intimate in the 2 direct gaze conditions. Positive feelings including liking for the listener and task satisfaction also were associated both with self-revelation and with direct gaze among females but not among males. Scott.** (Virginia Polytechnic Inst & State U) **Effects of a coactor's prediction on latencies to predict and identify stimuli.** *Acta Psychologica*, 1975(Dec), Vol 39(6), 469-485. Conducted 2 experiments, using 20 male undergraduates in Exp I and 40 male and 40 female undergraduates in Exp II. On each male and 40 female undergraduates in Exp II. On each of 300 trials E's confederate (C) verbalized which of 2 stimuli would occur; then S made a prediction. Following each presentation, S and C pulled a trigger to identify the stimulus. Two latencies were measured: the interval between C's and S's prediction (prediction time) and the interval between stimulus presentation and S's identification response (choice RT). Prediction times were significantly shorter when S's prediction agreed rather

than disagreed with C's prediction, when S's preceding prediction was correct rather than incorrect, and when S was female rather than male. Choice RT was influenced by distributions of C's stimulus predictions and C's prediction outcomes in directions supporting an expectancy model. (21 ref)—*Journal abstract.*

The study focused on the effects of demand characteristics incorporated in the experimental setup. Differentiation in age (20/40 yrs) and in social class (boss/worker) were introduced in the stimuli. 33 French and 31 Black African students were asked to designate 8 possible "liking" structures among 3 fictitious persons. When the persons were identified only by first names, or when the differentiating characteristic was irrelevant to social class (such as age for French Ss), Ss produced structures with all positive bonds. When the

factor of social class was introduced (age for Black Africans and worker/boss for all Ss), preference was found for positive bonds between equals and negative bonds between higher and lower class members. (English abstract)—*E. Brown*.

Social Perception & Motivation

12230. **Anderson, Norman H. & Clavdetscher, John.** (U California, La Jolla) **Tests of a conditioning hypothesis with adjective combinations.** *Journal of Experimental Psychology: Human Learning & Memory*, 1976(Jan), Vol 2(1), 11-20. 4 experiments, with a total of 124 undergraduates, gave direct tests of a popular hypothesis about the role of classical conditioning in person perception and social judgment. Ss first judged the likableness of a hypothetical person who was described by a high-value adjective and a medium-value adjective; later they judged the likableness of another hypothetical person described by the medium-value adjective alone. By the conditioning hypothesis, the implicit affective response (UCR) to the high value adjective (UCS) should become conditioned to the medium-value adjective CS. Accordingly, the response to the medium-value adjective alone should be increased by the initial pairing. Although some evidence for a pairing effect was obtained in Exps I and II it did not increase with added pairing trials past Exp I. It seemed, therefore, to represent some kind of initial familiarization effect, not true conditioning. Exps III and IV included a preliminary familiarization phase before testing for

conditioning. No evidence for conditioning was found. (27 ref)—*Journal abstract*.

12231. **Annis, Lawrence.** (Western Carolina U) **Study of Values as a predictor of helping behavior.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 717-718.—College students who had previously completed the Allport-Vernon-Lindzey Study of Values participated in a "lady in distress" measure of emergency helping behavior. Results do not support earlier suggestions that the Study of Values differentiates helpers from nonhelpers.

12233. **Bandura, Albert; Underwood, Bill & Fromson, Michael E.** (Stanford U) **Disinhibition of aggression through diffusion of responsibility and dehumanization of victims.** *Journal of Research in Personality*, 1975(Dec), Vol 9(4), 253-269.—Tested derivations from social learning theory on the disinhibition of aggression through processes that weaken self-detering consequences to injurious conduct. Two experiments were conducted, each with 72 undergraduates. Ss were provided with opportunities to behave punitively under diffused or personalized responsibility toward groups that were characterized in either humanized, neutral, or dehumanized terms. Both dehumanization and lessened personal responsibility enhanced aggressiveness, with dehumanization serving as the more potent disinhibitor. Escalation of aggression under conditions of dehumanization was especially marked when punitiveness was dysfunctional in effecting desired changes. The uniformly low level of aggression directed toward humanized groups, regardless of variations in responsibility and instrumentality of the conduct, attested to the power of humanization to counteract punitiveness.—*Journal abstract*.

12237. **Boucher, Daniel M. & Gormly, John.** (Rutgers State U) **Effects of personal competence on the significance of interpersonal agreement and disagreement: Physiological activation and social evaluations.** *Journal of Research in Personality*, 1975(Dec), Vol 9(4), 356-365.—Compared affect-reinforcement theory and consistency theory for their usefulness in predicting arousal during a social episode. 112 male undergraduates met in pairs to discuss their attitudes one 1 topic. Half of the Ss rated themselves as competent to defend the correctness of their attitude; the other half rated themselves as not competent to defend the correctness of their position on the topic. The topic was selected by the

E such that half of the pairs were in agreement in their attitude, while the other half had opposing attitudes. The 3 factors (competence of Person A, competence of Person B, and similarity of attitude) were crossed to produce 8 conditions. Skin conductance was continuously recorded. Ss rated each other on the Evaluative-Behavioral Attraction Measure. Skin conductance data support the affect-reinforcement hypothesis with a significant interaction between self-rated competence and similarity of attitude factors ($p < .05$). Hearing disagreement from the other person was highly arousing when an S said he was competent to present his position. Other significant effects for physiological activation, which were not predicted, are consistent with the affect-reinforcement theory.—*Journal abstract*.

(Old Dominion U) **Convergent and discriminant behavioral aspects of interpersonal trust.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 983-986. —Examined J. B. Rotter's construct of interpersonal trust and its relationship to overt behavioral trust and to self-disclosure. Without employing a deceptive or competitive task with the 41 undergraduate Ss, a behavioral measure of trust was devised and defined as the speed with which S initiated and completed a backward fall into the hands of a readied assistant. While scores on Rotter's Interpersonal Trust Scale were uncorrelated with those on S. M. Jourard's Self-Disclosure Scale, high trusters had shorter latencies on the behavioral task. These data represent evidence of the discriminant and convergent validity of the construct and measurement of interpersonal trust. High disclosers were more apt to volunteer for the behavioral task.—*Journal abstract*.

12248. Korte, Charles; Ypma, Ido & Toppen, Anneke. (U St Andrews, Scotland) **Helpfulness in Dutch society as a function of urbanization and environmental input level.** *Journal of Personality & Social Psychology*, 1975(Dec), Vol 32(6), 996-1003. —Administered 3 field measures of helpfulness—granting a street interview, calling attention to a dropped key, and assisting a lost person—to 2,567 Ss in Holland. For 2 of the 3 measures, there was significantly greater helpfulness under conditions of low environmental input level (measured by sound level, traffic count, pedestrian count, and building count) than under conditions of high input level. No difference occurred between cities and towns, nor between 4 Amsterdam neighborhoods with contrasting stereotypes of friendliness and helpfulness. Results are discussed in terms of the "urban incivility" phenomenon, the tendency of urban residents to be less helpful and considerate than their less urban counterparts when faced with a request or opportunity to provide assistance. (18 ref)—*Journal abstract*.

12249. Lavrakas, Paul J. (Loyola U, IL) **Female preferences for male physiques.** *Journal of Research in Personality*, 1975(Dec), Vol 9(4), 324-334. —Used a pair comparison design to gather information concerning female preferences for male physiques. By independently varying the size of 1 of 4 body areas (arms, upper trunk, lower trunk, or legs), 19 male silhouettes were constructed. Thurstone scale values indicating relative preferences among silhouettes were generated for each of 64 18-30 yr old females. Correlations were calculated between S variables (e.g., own physical appearance, personal habits, male and female sex-role attitudes) and the underlying preference factors for male physiques. While the bulk of the significant correlations were low, results suggest that women's preferences for male physiques can be summarized in terms of feminine and masculine sex-role stereotypes. Women who are traditionally feminine show a preference for traditionally masculine physiques, while less traditional women express more nonstereotyped preferences. It is also suggested that a female's preferences for male physiques may serve as an initial delimiter in narrowing the field of eligibles in heterosexual pairing. (21 ref) *Journal abstract*.

12250. Layton, Bruce D. (U North Carolina, Chapel Hill) **Attributions of interpersonal influence.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 2), 6105.

12251. Levenberg, Stephen B. & Spakes, J. William. (U Alabama Medical Ctr, Birmingham) **Locus of control of reinforcement and attraction in sensitivity group settings.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 719-723. 64 undergraduate and graduate students participated in 5 sensitivity groups. It was predicted that internal Ss (as determined by the Locus of Control for Interpersonal Relationships) would indicate greater interpersonal attraction for other internals, while externals would be attracted to group members with an

external orientation. Results show that amount of verbalization was related to attractiveness but not to own locus of control score. Ss showed no preference for others having a locus of control orientation similar to their own. Internals preferred others with locus of control orientations similar to each other but in no clear relation to their own internal orientation. Methodological problems with locus of control research are discussed. (16 ref)—*Journal abstract*.

12254. Mamali, C. (U Bucharest, Inst of Psychology, Rumania) **[The inertia of social perception and its effects on effective leadership.]** (Romn) *Revista de Psihologie*, 1973(Win), Vol 19(4), 433-443.—Examined the relationship between the status of an information giver and how this information is treated by the group receiving it, in Part 1 of a 2-part study. 52 students 17-18 yrs old were given a sociometric test, and the 2 pupils with the highest and the lowest status gave a description of 2 equally interesting books. Data gathered 1 wk later indicate that the information presented by the high-status pupil was retained by a significantly higher percentage of the group than information from the low-status pupil. Part 2 of the study investigated how evaluations by superiors affect the relationships among subordinates. 6,147 young industrial workers were evaluated by superiors, using a sociometric questionnaire. Results indicate a significant positive correlation between the way in which subordinates perceive the superiors' evaluation of peers and the collaborating relationships among the subordinates. It is concluded from both investigations that the inertia of social perception distorts relationships between hierarchical levels. The main types of distortion are increased discrepancy between the formal and informal hierarchical structures of the group, the appearance of barriers to psychological and social development, and deteriorated reception of messages. (English summary).—*C. Facabaru*

12264. Parlebas, P. (U René Descartes, Paris, France) **[Mathematical analysis of an athletic game.]** (Fren) *Mathématiques et Sciences Humaines*, 1974, No 47, 5-35.—Studied the game called "four corners" which is played by 5 players occupying the 4 corners of a quadrilateral and its center. The rules prescribe a succession of displacements organized according to a group structure. The set of displacement graphs can be distributed according to the equivalent classes of cyclic, spatial, and metric types. The movements of the players lend themselves to an analysis in terms of a decision tree and a success matrix. Rational behavior is expressed in strategies of antagonism or alliance. 65 Ss (5-25 yrs old) in 13 groups were observed for 1,275 moves in the game. The internal logic of the game determined the great majority of rational moves. However, certain players, notably the youngest and some females, sometimes preferred subjective patterns.—*M. G. Strobel*.

12268. **Singh, Ramadhar.** (Indian Inst of Technology, Kanpur) **Reinforcement, affect, and interpersonal attraction.** *Psychologia*, 1975(Sep), Vol 18(3), 142-148.—Tested the prediction that personal evaluations of and attitude similarity with another individual determine not only interpersonal attraction but also the feeling of the respondents. 30 university students read descriptions of 4 bogus strangers and rated their own feelings and their attraction toward the described persons. The descriptions were products of a 2×2 factorial design, having the Row factor of the Ss' evaluations by the stranger (positive vs negative) and the Column factor of attitude similarity between the Ss and strangers. Results indicate that personal evaluation was more powerful than attitude similarity as a determinant of the Ss' feelings as well as of their attraction toward the target persons. Support for the notion that the same stimulus-combination law could be applied to the ratings of one's affective state and his evaluative response was also impressive. In general, findings are consistent with D. Byrne's (1971) reinforcement-affect theory of interpersonal attraction.—*Journal abstract.*

12272. **Waldron, Joseph.** (Ohio State U) **Judgment of like-dislike from facial expression and body posture.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 799-804.

Studied the nonverbal communication of like-dislike information by superimposing all possible combinations of 3 facial expressions which communicated liking, neutrality, or disliking onto 2 body-posture pictures of a female which communicated liking or disliking. Analysis of variance indicated significant effects for Facial Expression and Posture and a significant Facial Expression \times Posture interaction for 30 female undergraduates. Postexperimental *t* tests indicated a complex relationship between facial expression and body posture.

It is concluded that body posture can communicate information in the presence of facial expression and that body posture probably moderates the information communicated by the face.—*Journal abstract.*

12273. **Weiss, Robert W.** (Samaritan Halfway Society, Jamaica, NY) **Note: Social desirability set in measurement of ethnic stereotypes.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 857-858.—Results of using the paired-comparison method show that the substantial positive correlation between the favorability value of an adjective and the percentage of graduate students choosing the adjective to describe a Japanese target group held for both salient and also unfamiliar target ethnic groups.

12275. **Zanna, Mark P. & Pack, Susan J.** (U Waterloo, Canada) **On the self-fulfilling nature of apparent sex differences in behavior.** *Journal of Experimental Social Psychology*, 1975(Nov), Vol 11(6), 583-591.—Tested the notion that a person's behavior conforms explicitly to the sex-role stereotype that attractive others have regarding the person's gender. In a 2×2 design, 80 female undergraduates were induced to characterize themselves to a male partner who was either desirable or undesirable and whose stereotype of the ideal woman conformed very closely to the traditional female stereotype or its opposite. Results, which held for both an attitudinal and a behavioral measure of self-presentation, indicate that when the partner was desirable Ss portrayed themselves as more or less conventional in terms of sex role, depending upon whether the partner's stereotypic view of women was traditional or not.—*Journal abstract.*

12276. **Zillmann, Dolf; Bryant, Jennings; Cantor, Joanne R. & Day, Kenneth D.** (Indiana U, Inst for Communication Research, Bloomington) **Irrelevance of mitigating circumstances in retaliatory behavior at high levels of excitation.** *Journal of Research in Personality*, 1975(Dec), Vol 9(4), 282-293.—A provoker aggressively instigated 60 male undergraduates. Ss then performed either a nonstrenuous or a strenuous task in order to be placed in either a moderate or an extreme state of sympathetic arousal. Following the task, Ss either learned or did not learn about mitigating circumstances behind the provoker's behavior. This information was received prior to the provision of an opportunity to retaliate. Under conditions of moderate arousal, mitigating circumstances reduced retaliation. In contrast, these circumstances failed to exert any appreciable effect on retaliation under conditions of extreme arousal. In addition, the induction of extreme arousal increased retaliatory behavior. Findings are considered to support a model of hostility and aggression that postulates a specific interdependency of cognitive and excitatory processes.—*Journal abstract.*

12298. Götz, Karl O. & Götz, Karin. (Academy of Fine Arts, Düsseldorf, W Germany) **Color preferences, extraversion, and neuroticism of art students.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 919-930.—Color preferences of 190 art students (mean age, 23 yrs) from 2 previous studies by the authors (1974, 1975) were compared with their corresponding scores on extraversion (E) and neuroticism (N) on the Maudsley Personality Inventory. It was found that the preferences of a group of 27 highly gifted Ss were different from preferences of average and less gifted Ss who had little or no artistic practice. In the latter group, extraverts and ambiverts mainly preferred primary and secondary colors (light clear and dark clear tones included), while introverts preferred tertiary colors (earth colors) and achromatics. However, in the highly gifted Ss no significant differences between positive and negative rankings in both color categories were found. Neuroticism had no effect on color preferences; this held for introverts and extraverts and for each single color. (27 ref)—*Journal abstract*.
12299. Harkins, Steve & Geen, Russell G. (U Missouri, Columbia) **Discriminability and criterion differences between extraverts and introverts during vigilance.** *Journal of Research in Personality*, 1975(Dec), Vol 9(4), 335-340.—In a signal detection task introverts were better able than extraverts to distinguish between the signal and noise distribution ($p < .001$) and also set a higher criterion point for their responses ($p < .01$). Ss were 20 college females who had been administered the Eysenck Personality Inventory. Results show that the superior vigilance in introverts reported by other investigators is due to 2 processes. (16 ref)—*Journal abstract*.
12300. Himle, David P. & Barcy, William. (U Michigan, School of Social Work) **Behavioral indices of anxiety and locus of control.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 1008. Experimental results support the prediction that undergraduates demonstrating greater externality (according to scores on Rotter's Internal External Control Scale) would report significantly more anxiety symptoms than those more internally oriented. A model is proposed to account for the data which suggests that the amount of perceived autonomic activity and intensity of the feelings of insecurity may be a component of perceived externality or internality.

12302. Joesting, Joan. **The influence of sex roles on creativity in women.** *Gifted Child Quarterly*, 1975(Win), Vol 19(4), 336-339.—Obtained demographic data on 138 female college students and administered the Laws Sexism test, the Torrance-Khatena What Kind of a Person are You, the Tan-Williams Preconscious Activity Scale, and the Schaefer Biographical Inventory—Creativity. Results include the finding that creative females need a creative mother-role model.—J. C. Gowan.
12303. Kaplan, Sheila J. (U Wisconsin) **The effects of a self-instructing model, behavior rehearsal, and internal-external instructions upon self-disclosure.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10 B), 5196.
12304. Kerr, Barbara J. & Galbraith, Gary G. (Washington State U) **Latencies of sexual and asexual responses to double-entendre words as a function of sex-guilt and social desirability in college females.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 991-997.—Used a restricted association procedure to study 69 female undergraduates' latencies associated with sexual and asexual responses to double-entendre sexual words. Latencies were also examined relative to 2 personality variables, sex-guilt and social desirability, using Ss' scores on the Edwards Social Desirability Scale and the Mosher Forced-Choice Guilt Scale. Results indicate that sexual responses were accompanied by longer latencies. There was also an interaction between sex-guilt and sexual asexual response latencies, with Ss of high sex-guilt showing longer latencies of sexual response but not of asexual response. Contrary to prediction, individual differences on the social desirability variable were unrelated to latencies of either sexual or asexual response. A stimulus-encoding model for associations to double-entendre sexual words is outlined. (16 ref)—*Journal abstract*.
12305. Khatena, Joe; Bedsoe, Joseph C. & Zetényi, Tamas. (Marshall U) **Creative perceptions of Hungarian and American students.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 901-902. Compared the factor means obtained from the administration of the 50-item Something About Myself inventory to 227 Hungarian high school and college males and females to similar data obtained by the 1st 2 authors (see PA, Vol 51:3149) from 672 American students. Americans obtained significantly higher mean scores on Environmental Sensitivity, Self-Strength, and Intellectuality, as well as on the total scale, whereas Hungarians obtained significantly higher scores on Initiative, Individuality, and Artistry. The observed differences are attributed to variability in cultural emphasis.—*Journal abstract*.
12306. Kilmann, Ralph H. & Thomas, Kenneth W. (U Pittsburgh) **Interpersonal conflict-handling behavior as reflections of Jungian personality dimensions.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 971-980. Investigated the Jungian psychological correlates of an individual's choice of different interpersonal conflict-handling modes: competing, collaborating, compromis-

ing, avoiding, and accommodating. These 5 modes were defined according to the 2 basic behavioral dimensions of assertiveness and cooperativeness and were also related to integrative and distributive dimensions. 86 male graduate students were given the Meyer-Briggs Type Indicator and 3 conflict measures. Results suggest that the Jungian functions related to judging (thinking vs feeling) and the type of enactment (introverted vs extraverted) were significantly related to an S's conflict-handling behavior. A schematic illustration of these Jungian functions, plotted upon the basic behavioral dimensions which define and characterize the 5 conflict-handling modes, is presented. (22 ref)—*Journal abstract.*

12318. **Muhich, Dolores.** (Southern Illinois U, Carbondale) **Testing hypotheses on behavioral preferences of university women and men with multiple linear regression.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 707-716. —Responses from 789 university students on the Self-report Inventory showed no significant differences between the sexes on the Educability dimension of the Activities Index. The Emotional Expression and Dependency Needs of the women were significantly greater than those of the men, while the men were significantly higher on Achievement Orientation. More significant differences in Educability were found for men studying in the Arts, Humanities, Social Sciences, Natural Sciences, and Undecideds than for women in these fields. Variations in behavioral decision patterns occurred for women and men with regard to how they allocated their time for school and nonschool activities. Women were significantly higher than the men on high school and college GPAs but significantly lower in representation for achieving advanced degrees. Impulse control was definitely related to how Ss allocated their time, and anxiety associated with fear of taking tests was positively related to number of hours spent for study purposes. Women were also significantly underrepresented in school-sponsored activities. (22 ref)—*Journal abstract.*

12319. **Nastović, Ivan.** (Neuropsychiatric Clinic, School of Medicine, Belgrade, Yugoslavia) **[The hypothesis of the familial unconscious.]** (Serbian) *Anali Zavoda za Mentalno Zdravlje*, 1973, Vol 5(4), 85-104. —Reviews the assumptions and conceptual framework of L. Szondi's "schicksals analysis" and attempts to determine its relationship to Freud's and Jung's theories. (20 ref) —*English summary.*

12321. **Nolan, Mary P. & Fargen, J. Jerome.** **Personality differences between able sophomore university students of 1961 and 1971.** *Journal of Educational Research*, 1975(Sep), Vol 69(1), 11-13.

Compared gifted college men on 5 personality variables. Ss were chosen on the basis of 3 criteria: uniformly high scores on both the Verbal and Mathematical tests of the College Entrance Examination Board and ranking in

the upper quarter of the high school graduating class. The Minnesota Personality Scale was administered to 131 Ss in 1961 and to 174 in 1971. Data analysis revealed significant differences in socialization, self-possession, social and economic views, and attitudes toward institutions over the decade of the 1960's. The mean 1971 score for each scale was lower than that for 1961 and for the test norm. Some explanation for the differences may be found in the social, economic, and political developments during the 1960's.—*Journal abstract.*

(VA Hosp, Oklahoma City, OK) **Existential states: Factorial composition in clinical groups.** *Newsletter for Research in Mental Health & Behavioral Sciences*, 1975(Feb), Vol 17(1), 16-17.—The existential scale was given to 1,320 Ss and the results were factor analyzed. The 5 factors that emerged indicate that general existential attitudes have affective, cognitive, and cognitive components.—S. M. Levin.

12328. Poortinga, Y. H. & Foden, Berna I. (Tilburg U, Netherlands) **A comparative study of curiosity in Black and White South African students.** *Psychologia Africana*, 1975, Mono Suppl 8, 60p.—Investigated whether the determinants of "curiosity" as studied by D. E. Berlyne (1960) could be identified for 50 Black South African university students and 47 students mainly of Caucasian descent. An attempt was made to design curiosity tests which were not biased in regard to experimentally irrelevant cultural factors. Physiological measures related to the level of arousal in the experimental situation (EEG, evoked potentials, and skin conductance) and intelligence tests were also included in the battery. Conditions for the equivalence of data across the samples were investigated. Although the curiosity tests did not meet

these requirements for comparability, the overall trend of the results reveal strong similarities in levels of performance. Of the 6 tests, which were accepted as having some validity as measures of curiosity, only 1 yielded a significant difference in average score between Black and White students. In general, the level of arousal was similar in both groups. Some differences with respect to the physiological measurements are interpreted as specific to the experiments concerned. There was also no evidence that the scores on the curiosity tests were related to the intelligence of the Ss. The finding that the intercorrelations between various curiosity tests were generally low, and its implications for the validity of the tests as measures of a single construct are discussed. (5% p ref)—*Journal abstract.*

12329. Prandi, Gaetano. (U Milano, Clinica delle Malattie Nervose e Mentali, Italy) **[Instinct, affect, and fantasy.]** (Ital) *Archivio di Psicologia Neurologia e Psichiatria*, 1975(Apr-Jun), Vol 36(2), 144-166.—Proposes that needs are primary to the expression of affects and fantasy. To achieve this differentiation we need to distinguish between internal and external experience and between reality and fantasy.—L. L'Abate.

12330. Prytula, Robert E. & Hiland, David N. (Middle Tennessee State U) **Analysis of General Anxiety Scale for Children and Draw-A-Person measures of general anxiety level of elementary school children.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 995-1007.—Selected 30 high-anxiety and 30 low-anxiety White 5th and 6th graders from 300 Ss who were administered the General Anxiety Scale for Children. These scores were used as the criterion measure of trait anxiety in a study investigating Ss' performance on the Draw-A-Person test. Figures drawn were man, woman, and self. Significant differentiation by the figure-drawing scores on the sex criterion was obtained for some indices; however, no significant relationships were found between Ss' human figure-drawing scores and their anxiety level as measured by the Anxiety Scale.—*Journal abstract.*

12332. Roll, Samuel & Brenneis, C. Brooks. (U New Mexico) **Chicano and Anglo dreams of death: A replication.** *Journal of Cross-Cultural Psychology*, 1975(Sep), Vol 6(3), 377-383.—To replicate an earlier study by S. Roll et al (1974) in which Chicanos reported having more dreams of death than did their Anglo counterparts, dream reports were obtained from 80 Chicano (40 males and 40 females) and 80 Anglo (40 males and 40 females) college students. The dreams were scored for the presence of death-related dream content. Chi-square tests revealed a statistically higher number of Chicano females reporting dreams of death, but the significance between Chicano males and Anglo males was not significant. Results are linked to the greater phenomenological emphasis on death in Chicano culture and the greater tendency for Chicano women to carry the influences of the culture.—*Journal abstract.*

12333. Rouff, L. Lynne. (Bryn Mawr Coll) **Creativity and sense of humor.** *Psychological Reports*, 1975(Dec),

Vol 37(3, Pt 1), 1022.—Experimental results support the prediction that undergraduate's scores on a creativity test and on a humor comprehension measure would be positively correlated. Findings strongly suggest that comprehension of humor and creative thinking are related and have a common basis in the ability to link disparities. The relationship appears to transcend intelligence

12334. Rouff, L. Lynae. (Bryn Mawr Coll) **Openness, creativity and complexity.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 1009-1010.—Examination of the relationships between dogmatism, creativity, and complexity for undergraduates showed of a significant negative correlation between dogmatism and creativity and corroborated theory concerning open-mindedness and creativity. Dogmatism and complexity were also negatively correlated.

12335. Ryckman, Richard M. & Cannon, David W. (U Maine, Orono) **Multidimensionality of locus of control and self-esteem.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 786.—Results in female undergraduates show that those with higher self-esteem tended to see themselves as exercising more personal control over events, as being more free from control by powerful others, and as living in environments where their reinforcers occurred in a more highly predictable fashion, than did Ss with lower self-esteem.

12336. Saklofske, Donald H. & Schulz, Henry W. (U Otago, Dunedin, New Zealand) **Factor analysis of repeated state hostility and guilt measures: Males.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 756-758.—Investigated the argument that trait estimates of hostility and guilt may be obtained from repeated testings with state measures. 77 male high school students were administered a checklist of 38 adjectives 8 times over 4 wks. Stability of the items indicated by correlations for repeated measures ranged from .59 to .64. A factor analysis of items summed over administrations indicated that as many as 7 factors may exist. There are, however, a number of serious psychometric difficulties with this procedure: scales tended not to produce a normal distribution, and average repeated-measures correlations for items varied widely about .18.—*Journal abstract.*

12337. Simonton, Dean K. (U Arkansas) **Age and literary creativity: A cross-cultural and transhistorical survey.** *Journal of Cross-Cultural Psychology*, 1975(Sep), Vol 6(3), 259-277.—Suggests that research on the relation between age and creative achievement could be improved by using (a) cross-cultural and transhistorical data and (b) multivariate rather than bivariate analyses. A sample of 420 literary creators was drawn from histories, anthologies, and biographical dictionaries of Western, Near Eastern, and Far Eastern literatures. The modal productive age was then regressed on field and civilization categorical variables, longevity, time, and eminence control variables, and a number of interaction terms. Results show that (a) poetry is produced at a younger age than prose (but there was no age difference between informative and imaginative prose); (b) achieved eminence and life span are positive determinants of the modal productive age; and (c) these

relationships are cross-culturally and transhistorically invariant. (15 ref)—*Journal abstract.*

12338. Thorson, James A. & Ackerman, Spencer. (U Georgia) **Attitudes toward the aged and frequency of thoughts about death.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 825-826.—No correlation was found between the scores of 130 professional and paraprofessional nurses, social workers, and mental health workers on N. Kogan's Attitudes Toward Old People scale and a measure designed to indicate the frequency of Ss' thoughts about death. The pattern of Ss' scores for the variable of years of education was consistent with earlier research.

12339. Urbina, Susana & Grey, Alan. (Fordham U) **Cultural and sex differences in the sex distribution of dream characteristics.** *Journal of Cross-Cultural Psychology*, 1975(Sep), Vol 6(3), 358-364.—Studied the validity of previous reports regarding sex differences in ratio of male characters in dreams. 8 dream descriptions were obtained from 192 college students in Lima, Peru, and New York City. Odd-even reliabilities for male dream characters ranged from .36 to .72. American Ss had a higher percentage of male dream characters than Peruvians. US males had a greater percentage of men in their dreams than US females; in Peru the sex difference was reversed. Findings contradict previous reports of males universally dreaming more about men than do females. Results support the conclusion that sex differences in the percentage of male characters in dreams are not universal. Differences in the sex ratio of dream characters more likely reflect sociocultural differences in contact between the sexes.—*Journal abstract.*

PHYSICAL AND PSYCHOLOGICAL DISORDERS

12345. **Beiser, Helen R.** (U Illinois, Abraham Lincoln School of Medicine, Chicago) **The clinician and the computer: The computerized study of two contrasting cases.** *Journal of the American Academy of Child Psychiatry*, 1975(Spr), Vol 14(2), 348-364.—Clinical data put in a form suitable for processing by a computer may enhance clinical understanding. Such data are presented for a school phobic boy and a delinquent girl. Research and clinical applications are discussed.—*Journal summary.*

12346. **Bolton, Brian.** (U Arkansas) **Dimensions of psychopathology: A review of factor analytic studies.** *Journal of Clinical Psychology*, 1973(Jul), Vol 29(3), 328-332.—Reviews 18 factor analytic studies of symptom ratings for hospitalized psychiatric patients. 12 major dimensions of psychopathology were identified by a judgmental clustering procedure. The use of syndrome status profiles for clinical and research purposes is suggested. (24 ref)—*Journal summary.*

12347. **Bourgeois, M. & Labrousse, D.** (UER de Psychiatrie, U Bordeaux, France) **[Miscarriage and abortion: I. Induced and spontaneous abortion. Psychopathological aspects in connection with a first sample of 411 requests for interruption of pregnancy.]** (Fren) *Annales Médico-Psychologiques*, 1975(Jul), Vol 2(2), 339-366.—Describes a sample of 411 women, among the first to receive a legal free abortion under the changed French law enacted in January 1975. More than half of the women were under 25 yrs old, with an unwanted pregnancy owing to absence or failure of contraception by reason of ignorance, refusal, or ambivalence. A comparison is made between psychological and psychopathological features notable among women requiring repeated induced abortion, and samples of other women suffering from repeated spontaneous abortions and infertility (as reported in the literature). In both situations the same troubles are frequently observed: problems with feminine identity, problematic maternal image, absence of father, unhappy childhood, and an immature sexuality and personality. A conflict between conscious and unconscious wishes creates opposite situations in the 2 groups: spontaneous abortion represents conscious willing for pregnancy, with unconscious rejection of it as unbearable; induced abortion represents a strong unconscious wish for pregnancy, with conscious and voluntary rejection of maternity. Some of the psychological problems of physicians newly required to perform legal abortions are discussed. *H. E. King.*

12348. **Bourgeois, M. & Labrousse, D.** (UER de Psychiatrie, U Bordeaux, France) **[Miscarriage and abortion: II. Voluntary abortion and resistance to contraception.]** (Fren) *Annales Médico-Psychologiques*, 1975(Jul), Vol 2(2), 366-377. Examines the psychological resistances to contraception which accompany and explain, in part, unwanted pregnancies and requests for abortion. These resistances take multiple form, both intrinsic and extrinsic, tied to cultural taboo, societal interdictions, traditional education, the status of women, and a psychological ambivalence with regard to sexuality. Often there is a strong unconscious desire for

pregnancy that contradicts the conscious refusal of maternity. Repeated demands for abortion, in an era of effective contraception, are often symptomatic of an underlying psychiatric problem. (55 ref)—*H. E. King.*

12349. **Broche, J. P.** [Sleep disturbances.] (Fren) *Bulletin de Psychologie Scolaire et d'Orientation*, 1973(Oct), Vol 22(4), 149-155.—Physiological, affective, and environmental causes of disturbed sleep are briefly reviewed; medications are enumerated. The role of family anxiety as a causative factor is stressed, and some practical advice is given. (English summary)

12350. **Howard, James S.** (Emory State Hosp, Psychiatric Div II & Medical-Surgical Services, Williamsburg, VA) **Folate deficiency in psychiatric practice.** *Psychosomatics*, 1975, Vol 16(3), 112-115.—Reviews the literature on the causes of folic acid deficiency, its psychiatric and neurological manifestations, clinical procedures for elucidating the deficiency state, and the metabolic importance of the substance. Folate is presently used sparingly because of the fear of subacute combined degeneration of the spinal cord. Evidence of folate deficiency has been found in state hospital patients diagnosed under a variety of disorders. Since response to adequate folate intake is often striking, it is urged that laboratory screening for the disorder should be done as soon as possible after the patient's admission to the hospital. 12351. **Levi, Lennart** (Ed.). (Karolinska Inst, Lab for Clinical Stress Research, Stockholm, Sweden) **Society, stress and disease: II. Childhood and adolescence.** London, England: Oxford U, 1975. xxii, 551 p. £22.50.—Papers related to the 6 sessions of the 1971 International Interdisciplinary Symposium deal with (a) the well-adapted child (definitions, objectives, methods, etc.); (b) potentially pathogenic psychosocial stressors, intervening variables, methods and precursors; (c) psychiatric psychosocial disease processes provoked by psychosocial stressors; (d) specific diseases provoked by psychosocial stressors; (e) preventions (primary and secondary); and (f) future research.

12352. **Linn, Margaret W.; Linn, Bernard S. & Stein, Shayna.** (U Miami, FL) **Ratings of impairment and functional status in prediction of mortality.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 998. Elderly males were measured on functional and impairment status at hospital discharge and followed up 6 mo later. Stepwise regression techniques were used to reduce the items to those that uniquely contributed to prediction of mortality. Data suggest that this method led to better classification of clinical condition and predictors of outcome.

12353. **Luborsky, Lester.** (U Pennsylvania Hosp) **Clinicians' judgments of mental health: Specimen case descriptions and forms for the Health-Sickness Rating Scale.** *Bulletin of the Menninger Clinic*, 1975(Sep), Vol 39(5), 448-480. Presents a specimen form of the Health-Sickness Rating Scale, directions for use, and specimen case descriptions. First considered in conjunction with the Menninger Foundation Research Project at its inauguration in 1951-1952, the Scale measures the level of mental health. A rating of 100 indicates the ideal state of complete functioning, while a rating of zero indicates total regression.—*J. Z. Elias.*

12354. Mitchell, Geoffrey & Murphy, J. B. (Carstairs State Hosp. Lanark, Scotland) **A survey of female patients in Carstairs State Hospital.** *British Journal of Psychiatry*, 1975(Nov), Vol 127, 445-447.—Describes the characteristics of the female population in Carstairs State (mental) Hospital. The patients were predominantly young, single, and physically fit, with a history of significantly more previous psychiatric admissions than their male counterparts. They showed a greater degree of violence towards both themselves and others before their admission to the hospital, and their length of stay was much shorter. One-third of the patients had an IQ of less than 70.—*Journal abstract.*

12355. Nihira, Kazuo; Yusin, Alvin & Sinay, Ruth. (U California, Los Angeles) **Perception of parental behavior by adolescents in crisis.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 787-793.—Used the Bronfenbrenner Parent Behavior Questionnaire to study parental behavior as perceived by 86 12-18 yr olds in a crisis ward. In contrast to normal school age children, these Ss viewed their parents as significantly more punitive, intrusive, restrictive, and to have higher demands for achievement for their children. A factor analysis of 15 subscales delineated 4 orthogonal factors: Nurturing, Punishing, Firm Control vs Lax Control, and Rejection. In terms of these factorial dimensions, no significant correlation was observed between the Ss' perception of parental behavior and the specific forms of their crisis behavior (i.e., suicidal, aggressive, psychotic, and drug-induced psychotic behaviors).—*Journal abstract.*

12356. Penick, Elizabeth C.; Powell, Barbara J. & Sieck, William A. (U Kentucky Medical Ctr) **Mental health problems and natural disaster: Tornado victims.** *Journal of Community Psychology*, 1976(Jan), Vol 4(1), 64-67.—Interviewed 26 19-76 yr old tornado victims to determine the mental health consequences of a natural disaster. Results, based on retrospective accounts, indicate that approximately 75% of the victims suffered increased psychological discomfort of a subjective nature 5 mo later. This discomfort was characterized by anxiety, nervousness, and mild somatic complaints. Disruptions in interpersonal relationships among family members were less frequently reported. The disaster did not produce severe emotional impairment, and few of the victims felt the need for professional mental health assistance.—*Journal abstract.*

12357. Rutter, Michael. (Inst of Psychiatry, London, England) **[Parent-child separation: Psychological effects on children.]** (Fren) *Psychiatrie de l'Enfant*, 1974, Vol 17(2), 479-514. Examines the literature on parent-child separation and reports the results of a detailed longitudinal study of patients' families. The data lead to the following conclusions: Parent-child separation is the source of immediate distress to the child but is not a major factor in producing long-term disturbances. Although separation experiences are correlated with the later development of antisocial behavior, the behavior is not caused by the separation itself but by the familial conflict which precedes and accompanies separation. A good affective relation with one parent can partially neutralize the harmful effects of a quarrelsome and unhappy family. Children vary in their reactions to family misunderstandings, and these differences are

correlated with sex and traits of character.—D. F. Herran.

12358. Spitzer, Robert L.; Endicott, Jean & Robins, Eli. (New York State Psychiatric Inst, Biometrics Research, New York) **Clinical criteria for psychiatric diagnosis and DSM-III.** *American Journal of Psychiatry*, 1975(Nov), Vol 132(11), 1187-1192.—Identifies the differences in formal inclusion and exclusion criteria used to classify patient data into diagnoses as the largest source of diagnostic unreliability in psychiatry. Efforts that have been made to reduce these differences are described, particularly the specified criteria approach to defining diagnostic categories, which was developed for research purposes. On the basis of studies showing that the use of specified criteria increases the reliability of diagnostic judgments, it is suggested that including such criteria in the next edition of the American Psychiatric Association's *Diagnostic and Statistical Manual of Mental Disorders (DSM-III)* would improve the reliability and validity of routine psychiatric diagnosis. (26 ref)—*Journal abstract.*

12359. Strauss, John S. (U Rochester, School of Medicine & Dentistry) **A comprehensive approach to psychiatric diagnosis.** *American Journal of Psychiatry*, 1975(Nov), Vol 132(11), 1193-1197.—Discusses problems of the typological diagnostic system currently used in psychiatry, which focuses primarily on symptoms in classifying psychiatric disorders. A comprehensive diagnostic system is described that would involve routine evaluation of 5 patient characteristics: symptoms, circumstances associated with symptoms, previous duration and course of illness, quality of personal relationships, and level of work function. It is suggested that such a multivariable approach to psychiatric diagnosis can provide valuable information about the patient to clinicians, researchers, and other mental health workers. (37 ref)—*Journal abstract.*

12360. Voysey, Margaret. **A constant burden: The reconstitution of family life.** Boston, MA: Routledge & Kegan Paul, 1975. vi, 244 p. \$18.95.—Analyzes parents' responses in interviews to questions about the effect on their family life of having a disabled child. It is argued that current theories about disability and family life constitute an official morality and ideology to which parents are expected to conform.

Mental Disorders

12361. Abruzzi, William. (Columbia U) **Drug-induced psychoses . . . or schizophrenia?** *American Journal of Psychoanalysis*, 1975(Win), Vol 35(4), 329-342.—Clinical data and 10 case histories are used to illustrate the following hypotheses: (a) Any intoxicant can produce a bad trip. (b) Anyone can experience a bad trip when set, setting, chemical, and method of intervention combine properly. (c) It is frequently impossible to differentiate between an acute schizophrenic episode and an acute drug-induced psychosis. (d) Psychotic experiences persisting after drug withdrawal and recurrent psychotic episodes thereafter are possible with no antecedent psychological history or prodromata. (e) Either an acute schizophrenic episode or an acute drug psychosis can be treated without restraints. (f) Amphetamines may prod-

use many psychotic experiences that would not occur otherwise. (49 ref) *J. Adams-Webber.*

12362. **Altschule, Mark D.** (Harvard Medical School, Francis A. Countway Library of Medicine) **The development of traditional psychopathology: A sourcebook.** New York, NY: John Wiley & Sons, 1976. vi, 330 p.

Presents texts, from ancient times to the beginning of the 20th century, dealing with theories of mental illness (concepts of the unconscious mind, sexuality, the ego, multiple personalities, etc) and with specific syndromes (affective disorders, thought disorders, and nervous disorders).

12363. **Barrois, Claude & Bazot, M.** [Reflections on the psychogenesis of acute psychotic states in military personnel posted overseas.] (Fren) *Annales Médico-Psychologiques*, 1975(Jun), Vol 2(1), 166-176. Analyzes 4 case histories of acute delusional psychosis appearing suddenly among military personnel during their 1st overseas assignment. Such a soldier experiences 2 forms of dislocation at once: he becomes a part of a rigid hierarchically organized human assembly, which assumes charge over most of his activities, and all pre-existing interpersonal relations are severed abruptly, and their remoteness is constantly confirmed by physical distance. This separation represents, for the vulnerable, either a basic abandonment or the loss of a primary love object. Occurring at the same time as a forced confrontation with other social realities (the familiar themes of barracks life; brutality, sexuality, aggression, etc.), and often combined with some form of physical challenge (accident, wound, adaptation to new climate), the result can be a flight into delusion. As the circumstances prevent the accomplishment of usual grief-work, the lost object must be reincarnated by the anxious and often depressed patient; e.g., through delusions of special birth and exalted kinship, a conviction that God has taken up residence inside him, etc. A theoretical psychoanalytic explanation of these clinical phenomena is offered emphasizing the importance of ego-splitting and primitive narcissism. *H. E. King.*

12364. **Bazhin, E. F.; Wasserman, L. I. & Tonkonogii, I. M.** (Inst Scientifique de Recherches Psychoneurologiques de V. M. Bekhterev, Leningrad, USSR) **Auditory hallucinations and left temporal lobe pathology.** *Neuropsychologia*, 1975(Oct), Vol 13(4), 481-487. —Assessed thresholds of tone signals of different duration in 30 right-handed patients (less than 35 yrs of age) with paranoid schizophrenia and different forms of verbal hallucination. In hallucinating patients, as compared to a control group (nonhallucinating schizophrenics with a paranoid syndrome), there was an asymmetry of detection thresholds for short-tone signals (from 10 msec or less) at the expense of an increase of thresholds in the right ear. In 2 patients with apparent left-handedness there was an asymmetry in the left ear. This asymmetry was marked in patients with genuine verbal hallucination. The relationship between verbal hallucination and the mechanisms of inner speech and the pathology of the audio-verbal zone in the temporal area of the dominant hemisphere are discussed. (French & German summaries) (23 ref) *Journal abstract.*

12365. **Berner, P.** [Psychoses: Endogenous or exogenous diseases?] (Fren) *Annales Médico-Psycholo-*

giques, 1975(Jun), Vol 2(1), 108-113. —Presents an essay on the definition of psychosis as described by German, French, British-American and Scandinavian authors and a hypothetical discussion of the interaction of the 4 basic pathogenetic dimensions agreed to by all the theorists, but differently weighted by each: (a) prior experience, (b) perturbing events (current), (c) prior modification of the (organic) substratum, and (d) current modifications of the (organic) substrate. The unique situation presented by schizophrenia, which appears to be both "reactive" and "constitutional," is discussed. *H. E. King.*

12366. **Berner, P.** [The present state of research into delusion.] (Germ) *Psychiatria Clinica*, 1978, Vol 8(1-2), 1-13. Discusses the concept of delusion and points out that currently delusions can be diagnosed only with the aid of phenomenological intuition. The decisive criterion is the high subjective certainty in the sense of an elimination of the possibility of chance coincidences without any narrowing of affect. Current hypotheses regarding the choice of theme, the acute elimination of chance without narrowing of affect, and the persistence of certainty and incorrigibility are discussed. The relationship between age at the onset of the illness and the choice of theme are discussed in terms of the author's findings. It is suggested that depending on the respective cultural setting, certain age specific themes can play a role in the formation of the content of delusions. The acute subjective certainty, as well as the incorrigibility are linked with organic or endogenous syndromes. (15 ref)—*English abstract.*

12367. **Blatt, Sidney J.** (Yale U) **Levels of object representation in anaclitic and introjective depression.** *Psychoanalytic Study of the Child*, 1974, Vol 29, 107-157. —Explores the hypothesis that depression is, in part, a function of impairments in the development of object representation. Based on a review of the literature, 2 types of adult depression are discussed—anaclitic and introjective—and case examples illustrating each type are presented. (4 p ref)

12368. **Blumenfeld, Jane A.** (U. New Mexico) **The role of the language sample and short term interventions in the differential diagnosis of mental retardation.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1524.

12369. **Briganti, Frank G.** (E. Texas State U) **The etiology and nature of neurosis according to transactional analysis and Heinz Hartmann.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5616-5617.

12370. **Busse, Ewald W. & Pfeiffer, Eric.** (Duke U Medical School) **Mental illness in later life.** Baltimore, MD: Garamond/Pridemark, 1973. vi, 301 p. \$7(paper), \$9(cloth). —Presents descriptions and discussions, written primarily for the use of the general practitioner, of the organic and affective mental disorders in older persons; the relationship between physical and psychological changes; diagnosis, treatment, ambulatory and institutional care, and insurance coverage.

12371. **Byrne, D. G.** (Australian National U. Social Psychiatry Research Unit, Canberra) **Note on decision time-movement time relationships in normal and depressed subjects.** *Perceptual & Motor Skills*,

1975(Dec), Vol 41(3), 907-910.—Notes the suggestion that under normal conditions, there is no relationship between decision and movement time components of response latency. However, for normal Ss, induced elevation of decision time produces compensatory reductions in movement time. Psychomotor retardation, commonly observed in depressive patients, shows elevations for decision time. In the present study it was hypothesized that such patients should also produce compensatory reductions in movement time. However, this was not supported in 30 acutely depressed inpatients. While 15 controls exhibited no relationship between decision and movement times, depressive Ss exhibited a positive one. The result is discussed in terms of a post hoc postulate of motivational deficit among depressive patients. (17 ref)—*Journal abstract*.

12372. Calcedo Ordoñez, Alfredo & Rendueles Olmedo, Guillermo. (Servicio de Salud Mental y Luchas Sanitarias de Sanidad de la Armada, Madrid, Spain) [Schizophrenia in the military environment.] (Span) *Revista de Psiquiatria y Psicología Médica*, 1974(Apr-Jun), Vol 11(6), 343-357.—Reviews literature on schizophrenia in the military environment and discusses 46 cases diagnosed during military service. Heredity, family, and social background, premorbid character, psychopathological history before military service, clinical aspects, beginning symptoms and their relation to the induction date, configurative factors, age, and marital status were studied. Comparison with data from the nonmilitary population shows a relatively low occurrence of schizophrenia in the military environment. Most of the observed cases were individuals with previous mental disturbances and were found during the 1st 2 wks of military service. (24 ref)—*E. T. Czeschlik*.

Describes the stages of sleep and points to the reduction of low-wave sleep time in depression and neurotic anxiety. (English & French summaries) (34 ref)—*F. Mester*.

12375. Chmiel, Andrew J. & Mattsson, Ake. (U Virginia Medical School) Heller's syndrome: A form of childhood psychosis of multicausal origin: Case report and review of literature. *Journal of the American Academy of Child Psychiatry*, 1975(Spring), Vol 14(2), 337-347. Heller's syndrome, a rapid deterioration of mood, behavior, and intellectual function seen after the 3rd or 4th yr in children of previously normal development, is discussed in terms of biological vulnerability, brain pathology, and psychological determinants. A case history is presented. (29 ref)—*R. M. Cohen*.

12376. Clemmey, Robert; Kennard, David & Mandelbrote, Bertram. (London Hosp, England) The assessment of social breakdown in newly-admitted psychiatric patients. *British Journal of Psychiatry*, 1975(Nov), Vol 127, 417-431.—Studied 45 patients'

social and domestic functioning preceding admission to a psychiatric hospital. A method is described for the quantitative assessment of "social breakdown" in the areas of work, domestic performance, and social group activity, based on reports from the patient and from another household member. Complementary changes in the domestic tasks carried out by other family members were also investigated. It was found that Ss' usual level of functioning and their degree of breakdown were related to psychiatric diagnosis on admission, to the patient's position within the family, and to the social class of the household. Discrepancies between reports were investigated in relation to these variables. (25 ref)—*Journal abstract*.

12377. Cohen, David B. (U Texas, Austin) Transient stress, rater bias, and Rorschach interpretation. *Journal of Clinical Psychology*, 1973(Jul), Vol 29(3), 345-347.—Tested the hypotheses that (a) Rorschach behavior is relatively sensitive to external conditions temporarily imposed upon the S and (b) test results may reflect interpreter biases as well as S's personality bias. Nine control and 10 experimental (induced stress) Ss responded to card III of the Rorschach test. Three groups of interpreters (9 2nd-yr clinical psychology graduate students, 8 more advanced students, and 8 professional clinical psychologists) blindly rated the protocols for psychopathology. All 3 groups rated the experimental protocols more pathological than the control protocols. Marginal support was obtained for the hypothesis that raters who attributed the most pathology to the protocols would have higher scores on a hostility questionnaire than raters who attributed the least pathology to the protocols. Data suggest that Rorschach interpretation can reflect both external conditions and interpreter bias. —*Journal summary*.

12378. Cohler, Bertram J. et al. (U Chicago) Social adjustment and psychopathology among formerly hospitalized and non-hospitalized mothers: I. Development of the social role adjustment instrument. *Journal of Psychiatric Research*, 1975(Apr), Vol 12(1), 1-18.—Used a modified Social Role Adjustment Instrument (SRAI) to examine characteristics of the SRAI and the social adjustment of 47 former mental patients who had been hospitalized following childbirth and 48 nonhospitalized women. The SRAI consists of 25 9-point scales used to rate a S's responses to a semistructured interview. Formerly hospitalized Ss showed greater maladjustment than nonpsychotic controls for each of 25 role dimensions. The most highly differentiating scales ($p < .001$) were Global Social Overall Social Investment, Overall Psychic Discomfort, and Overall Psychic Disturbance. The SRAI proved to be more than a unidimensional measure of psychopathology when subjected to a principle components analysis. 4 factors emerged: Capacity for Affiliation, Emotional Investment in Marriage, Mature Intergenerational Ties, and Conflict Regarding Parenthood. The SRAI appeared to be much more stable (reliable) for Ss in the community than for psychiatric Ss. For 7 scales, there was a significant difference between groups in the degree of correlation between initial and terminal evaluations (e.g., Task Performance and Contact with Friends). These dimensions were either most affected by intensive aftercare of

formerly hospitalized Ss experienced greater conflict in these areas and showed a more variable performance over time. There were relatively few demographic correlates of social adjustment among former patients and nonhospitalized controls. (42 ref)—*J. Sorokac.*

12379. DeLeon-Jones, Frank; Maas, James W.; Dekirmenjian, Haroutune & Sanchez, Jesus. (VA West Side Hosp, Psychiatry Service, Chicago, IL) **Diagnostic subgroups of affective disorders and their urinary excretion of catecholamine metabolites.** *American Journal of Psychiatry*, 1975(Nov), Vol 132(11), 1141-1148.—Notes that previous reports have indicated that some depressed patients excrete less than normal quantities of 3-methoxy-4-hydroxyphenyl glycol (MHPG). The present study indicates that a subgroup of depressed patients who excrete less than normal quantities of MHPG may be identified by the application of explicit clinical criteria. No significant differences were found in the excretion of normetanephrine, metanephrine, and 3-methoxy-4-hydroxymandelic acid among any of the diagnostic subgroups (totaling 33 severely depressed women) or between each patient group and a healthy comparison group (of 21 women). However, depressed patients diagnosed as having primary affective disorder and bipolar illness excreted significantly less MHPG than did the comparison group. (56 ref)—*Journal abstract.*

12380. Dohrenwend, Bruce P. (Columbia U) **Sociocultural and social-psychological factors in the genesis of mental disorders.** *Journal of Health & Social Behavior*, 1975(Dec), Vol 16(4), 365-392.—Discusses the etiological implications of sociocultural and social-psychological factors in the occurrence and distribution of functional psychiatric disorders. 3 bodies of evidence are analyzed: (a) epidemiological studies of the "true" prevalence of psychiatric disorders; (b) the literature on individual reactions to extreme situations; and (c) investigations of relations between psychopathology and more ordinary stressful life events. The major issues raised by this research are examined and a report of progress in resolving one of them centering on social class differences is presented. Suggestions are made about the development of quasi-experimental strategies, adoption of unusual sampling plans, and use of prospective rather than cross-sectional research designs for purposes of increasing the understanding of the role of sociocultural and social-psychological factors in the genesis of mental disorders. (4 1/2 p ref)—*Journal abstract.*

12381. Donnelly, Edward F. & Murphy, Dennis L. (NIMH, Bethesda, MD) **Primary affective disorder: MMPI differences between unipolar and bipolar depressed subjects.** *Journal of Clinical Psychology*, 1973(Jul), Vol 29(3), 303-306.—Compared MMPI scores obtained from 20 unipolar and 19 bipolar patients (mean ages, 48 and 44 yrs, respectively) hospitalized during a depressive episode. All bipolar Ss had at least 1 prior manic episode severe enough to require treatment. Objectively rated depression on the Bunney-Hamburg depressive symptomatology scale did not vary significantly in the 2 groups. Significant differences between the MMPI profiles of the unipolar and bipolar groups were found, the unipolar Ss manifested higher scores on the D and Pr scales, with Hs different in male Ss only.

The bipolar Ss were higher on the Ma scale. When the D scale values of the MMPI were correlated with the depression ratings on the Bunney-Hamburg measure, there was a significant difference in ratings for unipolar Ss only. (15 ref)—*Journal summary.*

12382. Dube, K. C.; Jain, S. C.; Basu, A. K. & Kumar, N. (S. N. Medical Coll, Agra, India) **Patterns of the drug habit in hospitalized psychiatric patients.** *Bulletin on Narcotics*, 1975(Apr-Jun), Vol 27(2), 1-10.—Of the 566 consecutive male admissions to Agra Mental Hospital during 1 yr, about 24% were regular cannabis users. Patients with a lower educational level tended to use the drug by smoking ganja while those with a higher educational level tended to use bhang, either as pill or in a beverage. Laborers and agriculturists in the rural areas smoked in greater numbers. There was no correlation with the level of income. 96% of patients with the diagnosis of toxic psychosis used cannabis, 67% of those with the diagnosis of psychopathic personality, 20% of the schizophrenics, and 23% of the manic depressives. These and other findings are compared with those of earlier studies.—*A. S. Kulkarni.*

12384. Ellis, Myra. (Hofstra U) **The effects of sex of model and sex of subject and behavior on modeling with hospitalized psychiatric patients.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5187.

12385. Escande, M.; Gayral, L. & Girard, M. [Psychotic states and psychotic organization during anorexia nervosa.] (Fren) *Annales Médico-Psychologiques*, 1975(Jul), Vol 2(2), 382-392.—Presents the view, illustrated by case histories, that although the anorexic patient appears to be neither neurotic, psychotic, nor psychosomatic in the usual psychopathological sense, several features suggest that the closest link of anorexia may be to a psychotic mental organization. This entity is not always benign in its evolution. Certain patients experience transitory but authentic psychotic episodes, while others reveal a mental organization close to that of the psychotic: a narcissistic disorder, with massive regression in the service of a megalomaniac ego which is disembodied and therefore immortal. During the earliest mother-child relationship the mother has come to be perceived as a fusional and indispensable object, hindering the individuation and developing autonomy of the ego with the body serving as intermediate object in this fusion. Treatment consists not in mere weight-gain or recovery of menstruation, but should be directed toward neuroticization of the basic conflicts. Individual psychoanalytic therapy is difficult and may be dangerous owing to the anxiety-provoking potential of the massive regression. Group psychotherapy, psychodrama, and relaxation therapy are more useful as they are less feared by anorexics.—*H. E. King.*

12386. Fadda, S. & Müller, C. (Hôpital de Cery, Lausanne, Switzerland) [Post-schizophrenic depression.] (Fren) *Annales Médico-Psychologiques*, 1975(Jun), Vol 2(1), 65-71.—Summarizes the literature on post-schizophrenic depression. There is no agreement yet on this controversial subject. Four positions have been

taken: (a) It is a regularly observed phenomenon and can best regarded as a late phase in the unfolding of the psychosis. (b) It is a secondary consequence of neuroleptic treatment. (c) The depressive mood is not a new development, but has been hidden by the acute psychotic symptomatology. (d) It is a consequence of a too intensive psychotherapeutic approach in the postpsychotic interval. (18 ref)—*H. E. King.*

12387. **Feinberg, Irving.** (VA Hosp, Psychiatry Service, San Francisco, CA) **Mental health and behavioral sciences research in the VA (FY 1974).** *Newsletter for Research in Mental Health & Behavioral Sciences*, 1975(Feb), Vol 17(1), 1-6.—Describes research by the Veterans Administration on schizophrenia, manic-depressive illness, and suicide. Psychophysiological research and studies of biofeedback and sleep are also reported.—*S. M. Levin.*

12388. **Flannes, Steven.** **The perception of kinship terms.** *Humboldt Journal of Social Relations*, 1974(Spr-Sum), Vol 1(2), 102-105.—Tested the hypothesis that schizophrenics would show less factor communality than nonschizophrenics in their perceptions of English kinship terms, and more distortion. 13 schizophrenics and 13 matched nonschizophrenics were presented 15 kinship terms, 3 at a time, and asked to indicate which 2 terms were most and least similar in meaning. The 105 distances obtained were correlated and factor analyzed. High loadings and high communality, on a factor interpreted as the cultural norm in the perception of the meanings of English kinship terms, were found present in nonschizophrenics and absent in schizophrenics. (42 ref)—*P. Babarik.*

12389. **Flinn, Susan K.** (City U New York) **The effect of praise and censure on the task performance, poor vs good pre-morbid schizophrenic males.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5188-5189.

12390. **Fochtman, Grace A.** (Cleveland Psychiatric Inst, OH) **Disturbances in object relations in a chronic schizophrenic patient.** *Perspectives in Psychiatric Care*, 1975(Jan-Mar), Vol 8(1), 13-16. Discusses theories of object relations that place the cause of schizophrenia in the early mother-infant relationship. Within the framework of psychoanalytic ego psychology, a case is reported of a schizophrenic patient who manifested impaired ego development with consequent disturbances in object relations. These disturbances included imperfect differentiation, incorporation, poor integration, overdependency, and separation anxiety. *M. I. Hogan.*

12391. **Franzen, Goran & Ingvar, David H.** (St Lars Hosp, Lund, Sweden) **Absence of activation in frontal structures during psychological testing of chronic schizophrenics.** *Journal of Neurology, Neurosurgery, & Psychiatry*, 1975(Oct), Vol 38(10), 1027-1032. The distribution of activity in the dominant hemisphere was measured with the regional cerebral blood flow (rCBF) technique in 27 chronic schizophrenics and 15 nonschizophrenic controls (alcoholics) at rest and during psychological testing (e.g., an auditory digit-span-backward-test and Raven's Progressive Matrices). In the nonschizophrenics, an increase of rCBF was observed during the test in frontal regions. In the chronic schizophrenics, on the other hand, very limited or no increase was recorded. In postcentral structures the flow

response during testing was, by and large, equal in the psychotics and the controls. Findings support the hypothesis advanced previously by the authors (see PA, Vol 53:11872) that in chronic schizophrenia there is defective transmission in the mediotthalamic frontocortical projection bundle. This defect also appears responsible for the abnormally low resting flow (activity) in the dominant hemisphere in chronic schizophrenia.—*Journal abstract.*

12392. **Freeman, Thomas.** (Holywell Hosp, Antrim, Northern Ireland) **Childhood psychopathology and adult psychoses.** New York, NY: International U Press, 1976. xii, 293 p.—Reports on investigations of possible similarities between (a) neurotic and borderline states in children and (b) manic-depressive and paranoid states in adults. Clinical and theoretical problems arising from psychotic illness in adults are examined, using the metapsychological approach.

12393. **Gabriel, E.** [Chronic delusional psychosis and sociogenesis.] (Fren) *Annales Médico-Psychologiques*, 1975(Jun), Vol 2(1), 128-135.—Discusses whether sociocultural forces may influence the continuation of delusions, once they have appeared, or inhibit them. Descriptive statistics are derived from the catamneses of 110 late-developing schizophrenias (i.e., according to M. Bleuler's 1943 classification, disorders first appearing clearly after age 40). These gerontopsychiatric patients (average age 76) had been followed for 20 yrs or longer since first hospitalized with a delusional syndrome. The majority maintained a delusional structure over a long course of illness, either stable in form (20%), or unstructured (46%). Descriptive profiles of the 3 subgroups on the sociocultural characteristics of family of origin, civil status, occupational adjustment, and history of conflict with the law, did not differ significantly (with 1 exception, an increased proportion of family perturbation at 1st admission among those whose delusions abated). Compared with depressives, significantly more delusional patients lived without a partner (i.e., celibates, separated, widowed, or divorced). No relation was evident between occupational adaptation and delusion; in contrast, paranoid patients had poorer occupational adjustment and more conflict with the law. In a prognostic sense, the differing clinical forms of delusion do not appear to have practical social implication, but a solitary civil status may help to explain the persistence of delusional thinking.—*H. E. King.*

12394. **Gabriel, E.** [The nosological problem of catathymic delusional formations from the genetic viewpoint.] (Germ) *Psychiatria Clinica*, 1975, Vol 8(1-2), 88-92.—Presents a literature review and findings of investigations into the genetics of catathymic delusional illnesses. The primary probands are grouped according to their psychopathology, and it is shown that the relatively few schizophrenic secondary probands were fairly equally distributed over all the subgroups of the case material, whereas the relatively frequent manic depressive secondary probands are related exclusively to those primary probands whose general psychiatric symptomatology, irrespective of the catathymic delusional syndrome, was classified psychopathologically as manic-depressive.—*English abstract.*

12395. Gabriel, E. [The outcome of catathymic delusional formations in the light of their long-term catamnesis.] (Germ) *Psychiatria Clinica*, 1975, Vol 8(1-2), 81-87.—Two groups of patients with delusional illnesses (previous paranoiacs and previous "late schizophrenics" with delusional syndromes) with similar backgrounds, were followed up after many years and were re-examined in the same way. They were compared with each other in terms of further developments of delusional formations and their psychopathological determinants. In the group of "late schizophrenics" the delusions disappeared more frequently than in the groups of paranoiacs, and the delusional productivity diminished more often. On examination of various psychopathological characteristics and their influence on the further development of delusional formations (core syndromes of the general psychiatric symptomatology, appearance of affective changes, further development of the delusional productivity) only tendencies were shown, never obligatory relationships. The order of the relationships which was found was unclear, and it is suggested that these relationships are not of the first order. —English abstract.

12396. Gabriel, E. [The prognostic and therapeutic aspect of catathymic delusional formations.] (Germ) *Psychiatria Clinica*, 1975, Vol 8(1-2), 45-54.—The prognostic and therapeutic aspects of catathymic delusional formations, excluding those associated with organic psychoses, are presented from 5 viewpoints: (a) the present possibilities of psychiatric prognostication, (b) prognostic implications of nosological classifications, (c) prognostic significance of nosographic characteristics, (d) relationship to general rules of psychiatric prognostics, (e) therapeutic points. Regarding (c), findings are presented concerning the long-term development of delusional formations and the long-term course of delusional illnesses classified as "schizophrenia of late onset." Their relationships to the formation of defect syndromes and to the psycho-organic deterioration in old age are discussed. (17 ref)—English abstract.

12397. Gallant, Donald M. & Simpson, George M. (Eds). (Tulane U, Medical School) *Depression: Behavioral, biochemical, diagnostic and treatment concepts*. New York, NY: John Wiley & Sons, 1976. 351 p. \$25.—Presents an overview of current theories about depression and of research into diagnosis and treatment. Among the specific aspects covered are hereditary factors, clinical evaluation, pharmacological interventions and their outcomes, and depression in children and the elderly.

12398. Garver, David L.; Pandey, Ghanshyam N.; Dekirmenjian, Haroutune & DeLeon-Jones, Frank. (Illinois State Psychiatric Inst, Chicago) *Growth hormone and catecholamines in affective disease*. *American Journal of Psychiatry*, 1975(Nov), Vol 132(11), 1149-1154.—Studied growth hormone (GH) release after insulin-induced hypoglycemia (HI) in relation to urinary 3-methoxy-4-hydroxyphenyl glycol (MHPG), the major metabolite of central norepinephrine. Ss were 12 20-64 yr old patients with affective disease. There was a significant linear correlation of urinary MHPG levels and GH peaks after HI in unipolar depressed patients and in manic patients; however, GH peaks in manic

patients shifted downward on the GH axis in comparison to the unipolar depressive patients. It is suggested that such shifts in the GH response may occur as a result of abnormalities of other neurotransmitter systems also known to facilitate GH release. (38 ref)—Journal abstract.

12399. Hare, Edward H. (Bethlehem Royal Hosp, Beckenham, England) *Season of birth in schizophrenia and neurosis*. *American Journal of Psychiatry*, 1975(Nov), Vol 132(11), 1168-1171.—National studies in Scandinavia and in England and Wales have shown that schizophrenic patients are born significantly more often in the early months of the year than would be expected from comparison with the general population. The present study examined additional evidence from England and Wales. Findings show that, among nearly 10,000 schizophrenic patients, the proportion born during the period January to March was 7% greater than expected. First admissions during the 4 yrs 1970-1973, and covering those patients born 1921-1955, 1921-1955, constituted the sample. Possible sources of technical error are discussed. Although there is currently no evidence of a causal association between season of birth and schizophrenia, it is suggested that this possibility should be given consideration.—Journal abstract.

12400. Hayman, Anne. *Some unusual anal fantasies of a young child*. *Psychoanalytic Study of the Child*, 1974, Vol 29, 265-276.—Discusses anal fantasies centering around feces, occurring during the psychoanalysis of a preschool age male. Possible determinants of these fantasies are briefly discussed.

12401. Hinterhuber, H. & Hochenegg, L. (Leopold-Franzens U Innsbruck, Psychiatrisch-Neurologisch Klinik, Austria) [Gastric ulcers, stress and schizophrenia: Incidence of gastric ulcers in male schizophrenic patients.] (Germ) *Archiv für Psychiatrie und Nervenkrankheiten*, 1975, Vol 220(4), 335-345.—In agreement with the hypothesis of a biochemical disorder in schizophrenia, it was found that schizophrenic patients show a modified reaction to stress. 668 male schizophrenics were examined, and 18 cases of ulcers (2.69%) were found. This finding contrasts with the average incidence of ulcers at the rate of 10%. 12 of the 18 patients with ulcers had preliminary, serious somatic lesions. It is concluded that the hypothalamic stress response is altered in schizophrenia: A significant difference exists in the incidence of gastric ulcers in normal and schizophrenic populations. (62 ref)—English abstract.

12402. Hofmann, G.; Grünberger, J. & Hofmann, H. (Wagner-Jauregg-Krankenhaus des Landes, Linz, Austria) [On the course of atypical psychoses.] (Germ) *Psychiatria Clinica*, 1975, Vol 8(3), 115-126.—Attempted to classify the atypical psychoses according to cross-sectional psychopathological criteria. Two groups were separated from a group of benign schizophrenics; a 4th group served as a comparison group and was matched with the nuclear group. Group C (atypical manic depressive illnesses) which was closer to manic depressive illness than the other 2 groups, differed from it by thought disorders and delusional experiences. In the further course of the illness, after a few schizophrenic symptoms had appeared once or repeatedly during the

acute stage, the typical features of manic depressive illness became more apparent. In group A (mixed psychiatric syndrome) manic depressive and schizophrenic symptom complexes appeared for quite some time during the acute stage with approximately equal clarity and significance. On the whole, it was difficult to recognize the defect states from their original state once the illness had settled down. A classification of the atypical psychoses and their differentiation from typical manic depressive illness or nuclear schizophrenia is considered necessary because of the social prognosis of the atypical psychoses. It is suggested that future studies should use as control groups bi- and unipolar affective psychoses and nuclear schizophrenics with a severe course. The subgroups of the atypical psychoses will be used to evaluate different long-term therapies in a further study. (27 ref)—*English abstract*.

12403. Juhász, P. [Social factors increasing pathogenic illness in a closed geographic community: A village in Hungary.] (Fren) *Annales Médico-Psychologiques*, 1975(Jun), Vol 2(1), 117-123.—Describes the fundamental changes which characterize the conversion of a small village from a traditional economy to that of a modern socialist cooperative. Rapid change from traditional values dislocates established patterns of interpersonal relations, and this disruption becomes manifest in behaviors such as school problems, alcohol abuse, a sense of overburdening by work, and alienation of the generation. These neurotic problems are seen as an inescapable initial phase of urbanization and collectivism, the result of an inadequate preparation for radically altered life-modes, and the relative slowness of remote villages to adapt to cultural reforms that follow economic progress. These neuroticizing influences may be expected to abate as the gradual democratization of administration and social institutions is achieved.—*H. E. King*.

12404. Kaplan, Louise J. (New York U, Graduate School of Arts & Sciences) **Testing nontestable children.** *Bulletin of the Menninger Clinic*, 1975(Sep), Vol 39(5), 420-435.—Presents general approaches and techniques for psychological testing of severely disturbed children. The idea is to create a diagnostic environment that permits the child to reveal himself. This environment must be thought of as a realm somewhere between the objective and the subjective. 2 case examples are presented.—*J. Z. Elias*.

12407. Kerry, R. J. & Orme, J. E. (Middlewood Hosp, Sheffield, England) **A factorial study of the In Patient Multidimensional Psychiatric Scale.** *Journal of Clinical Psychology*, 1973(Jul), Vol 29(3), 368-370.—Conducted a factor analysis of the scores on the Inpatient Multidimensional Psychiatric Scale (IMPS) 1st-order factors and experimental syndromes obtained from a series of

100 consecutive admissions to a female psychiatric ward. Five factors that identify depressive states, manic states, paranoid schizophrenia, and 2 types of nonparanoid schizophrenia were identified. These 5 factors are compared and contrasted with 5 previously published IMPS 2nd-order factors.—*Journal summary*.

12408. Kimble, Ray; Williams, James G. & Agrad, Stewart. (U Mississippi Medical Ctr) **A comparison of two methods of diagnosing hysteria.** *American Journal of Psychiatry*, 1975(Nov), Vol 132(11), 1197-1199.—Compares the syndrome of hysteria, defined as or indicated by a specified response to a 55-item symptom checklist previously used by S. B. Guze (1962) and other researchers, with the definition of hysterical personality in the 2nd edition of the American Psychiatric Association's *Diagnostic and Statistical Manual of Mental Disorders (DSM-II)*. When 20 female control Ss and 10 female hysterical personalities (DSM-II) were given the Perley-Guze test, results showed a close correlation between positive scores on the symptom checklist and the *DSM-II* diagnosis. The theoretical usefulness and practicality of the test are briefly discussed, and some difficulties in administration are noted.—*Journal abstract*.

12409. Kohler, C.; Clère, J. & Hostin, H. [Child phobo-obsessional manifestations: Clinical and therapeutic elements.] (Fren) *Psychiatrie de l'Enfant*, 1974, Vol 17(2), 341-412.—Studied child phobo-obsessional (PO) manifestations in the light of clinical and therapeutic experience. The relationship between hysteria, phobia, and obsession is discussed and an attempt is made to explain the problems of diagnosing PO manifestations in children. Phobic neurosis and obsessional neurosis do not exist in the child or adolescent, but rather a PO syndrome with an important symbolic value. A phenomenological and structural approach is presented in detail in a longitudinal study of 7 cases, to illustrate a theory of a pregenital origin of PO manifestations. The usefulness of the structural diagnosis is discussed. (80 ref)—*D. F. Herran*.

12410. Kramer, Alice P. **A comparison of the animistic beliefs of schizophrenic children with normal children, as revealed by a test based on Piaget's research.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5197-5198.

12411. Kretschmer, Wolfgang. [Delusions as expressions of life events.] (Germ) *Psychiatria Clinica*, 1975, Vol 8(1-2), 14-19.—Presents a review of the relative weight attributed to biographical factors in the origin of various delusional formations. The case history of a patient with sensitive delusions of reference is presented to illustrate how, in this case, the delusions grew out of certain life events and connections.—*English abstract*.

12412. Labrecque, Gary P. (Syracuse U) **A comparative analysis of three clustering algorithms applied to four similarity coefficients for the purpose of classifying schizophrenics in epidemiological research.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5198-5199.

12413. Loewald, Hans W. (Yale U, Medical School) **Current status of the concept of infantile neurosis: Discussion.** *Psychoanalytic Study of the Child*, 1974, Vol

29, 183-188.—Bases a discussion of infantile neuroses on experiences in psychoanalytic treatment of adults. Pre-oedipal disturbances, repression, and 3 factors (biological, phylogenetic, and psychological) which Freud related to the development of neuroses are discussed.

12414. **Loranger, Armand W.** (Cornell U, Medical Coll, New York, NY) **X-linkage and manic-depressive illness.** *British Journal of Psychiatry*, 1975(Nov), Vol 127, 482-488.—In 1935 A. J. Rosanoff et al suggested that the apparently higher incidence of manic-depressive illness in females might be due to X-linked heredity. The hypothesis was undermined by subsequent reports by E. Slater (1971) of the frequent occurrence of father to son transmission. G. Winokur and his associates (1969, 1971) have provided data which indicate that such transmission is absent or rare in the bipolar form of the illness. Additional support has come from linkage studies with known genetic markers located on the X chromosome. The present study, based on the 400 parents of 100 male and 100 female bipolar manic-depressive probands, found no lack of father-son compared to other affected parent-child pairs. This finding, together with a review of the literature, would indicate that it is premature to invoke X-linked heredity as a general explanation for bipolar manic-depressive illness, though there is mounting evidence that it may account for the illness in some family pedigrees. (18 ref)—*Journal abstract*.

12415. **Lorr, Maurice; Pokorny, Alex D. & Klett, C. J.** (Catholic U of America) **Three depressive types.** *Journal of Clinical Psychology*, 1973(Jul), Vol 29(3), 290-294.—Rated 657 male acute psychotics from 11 hospitals on a revised 12-symptom form of the Inpatient Multidimensional Psychiatric Scale (IMPS) following an interview within 3 days of admission. Each of 3 subsamples of 120 cases was searched for similar score profiles subgroups by means of a computerized procedure. The analysis isolated 3 depressed types (anxious, retarded, and hostile), 2 excited types, 2 paranoid types, and 1 schizophrenic-like type. On the whole, findings confirm subgroups previously isolated on the shorter, 10 syndrome IMPS.—*Journal summary*.

12416. **Marchais, P.** (Hôpital Foch, Service de psychothérapie, Suresnes, France) **[The process of perversion: Methodological and clinical study.]** (Fren) *Annales Médico-Psychologiques*, 1975(Jul), Vol 2(2), 241-266.—Examines the nature of perversity as seen from the classical-historical, psychoanalytic, and psychopathological viewpoints. An attempt is made to define more precisely both the field of study and the processes which are common to perversions at different levels of behavioral organization (biopsychological, instinctual, instinctuo-affective, social, and ethical). Clinical examples are cited to support the concept that a single, general dynamic underlies perversion of quite different kinds. Suggestion provides a motive force that is fundamental and independent of the intellect. Unfulfilled drives, in the presence of unremitting suggestion (from another, from the group, or even from the self), brings about first a leveling and then a reversal of values. The individual becomes addicted to the new situation and, in unstable individuals or in the absence of moral restraint, the perversity may spread and disrupt other forms of

behavior. The links between perversion and mental pathology are undeniable, but perversity cannot be reduced only to an abnormal mental process operating independently of social and cultural controls.—*H. E. King*.

12417. **Marchais, P.** **[Magic and myth in the formation of delusional convictions.]** (Fren) *Annales Médico-Psychologiques*, 1975(Jun), Vol 2(1), 135-141.—Holds that the infrarational processes which give rise to delusional beliefs are influenced by magical and mystical thinking, and that these, in turn, have powerful ties to identifiable abstractions within a culture. The influence of these primitive thought patterns may become dominant during the loss of conscious vigilance and affective upheaval (most often depressive) that psychosis brings. There are no direct connections between the type of pathology and the content of a delusion, but there is often detectable a predisposition to a patterning of belief that can be influenced by identifiable sociocultural phenomena: belief in sorcery, religiosity, occultism, supernatural knowledge, etc. These inclinations remain latent until contact is made with their social aspect (e.g., association with Eastern mystic cults, faith healers, etc) during a period of psychotic vulnerability. The underlying psychic automatisms liberated by psychotic dyscontrol make possible the link-up between efforts by the individual to maintain some control over sensorial imbalance, neurovegetative problems provoked by anxiety, etc, and the social support offered by others who perpetuate magical and mythical thinking in the culture.—*H. E. King*.

12418. **Maricq, Hildegard R. & Edelberg, Robert.** (Medical U of S Carolina, Div of Rheumatology & Immunology) **Electrodermal recovery rate in a schizophrenic population.** *Psychophysiology*, 1975(Nov), Vol 12(6), 630-633.—Predicted that for nonaversive stimuli and tasks demanding goal-orientation, schizophrenics would have slower recovery rates than normals. The present study examined recovery rate for 28 male hospitalized schizophrenics (mean age, 43 yrs), free of medication, and 27 controls (mean age, 40.9 yrs), under nonaversive conditions (i.e., mild stimuli, rest, or simple tasks) as well as 1 aversive situation (the cold pressor test). For the nonaversive situations, the schizophrenics had significantly slower recovery rates. For the aversive situation there was no significant difference. Results are consistent with the interpretation that schizophrenics usually have slower recovery than normals but may be less susceptible than normals to the slowing effects of aversive elements in the stimulus situation.—*Journal abstract*.

12419. **Mayou, Richard.** (U Oxford, Warneford Hosp, England) **The social setting of hysteria.** *British Journal of Psychiatry*, 1975(Nov), Vol 127, 466-469.—Contends that previous reviews of hysteria have emphasized the most severe and disabling forms and ignored evidence from a wide variety of sources. It is argued that hysteria is more prevalent in medical settings than is usually recognized and that the same psychological mechanisms are of wide occurrence, often being accepted as normal for the culture. In a discussion of the social factors affecting prevalence, it is suggested that there is a universal potential for the hysterical reaction, with

individual variation in susceptibility in appropriate circumstances. (25 ref)—*Journal abstract.*

12420. **Milosavljević, Petar.** (Institute for Mental Health, Belgrade, Yugoslavia) [Immunobiological prospects of past analyses of biochemistry in schizophrenia.] (Srce) *Anali Zavoda za Mentalno Zdravlje*, 1973, Vol 5(4), 67-71.

12421. **Misès, R.** [Psychogenic factors in the psychoses: Contributions of child psychopathology.] (Fren) *Annales Médico-Psychologiques*, 1975(Jun), Vol 2(1), 124-128.—Considers the role of organic factors (reticular disorder and sensorial dysregulation) and milieu factors (family pathogenesis) in evoking adult psychotic behavior, with specific reference to the psychoses of childhood. It is notable that frank psychoses in children rarely develop into adult schizophrenia, and that pediatric psychiatrists are discovering increasing evidence today of undoubted pathological mental organization in very young children which remains compensated; either by an obsessional control of behavior, or by deficiency substitutions provided by the situation. A full evaluation must include not only the pathogenic aspect of certain families, but also the adaptive function they may perform. This balance is often delicate, and it is not surprising that sudden events can produce massive decompensation. Child psychiatry today, more than formerly, is aware that no simple causality obtains, and that even weighting the contribution of social compared to biological factors in the production of behavioral disharmony varies with developmental stage.—*H. E. King.*

12422. **Müller, E. & Wytek, R.** [The delusional percept: An attempt at definition and experimental results.] (Germ) *Psychiatria Clinica*, 1975, Vol 8(1-2), 65-72.—In order to circumscribe the concept of delusional perception as the essential element in the diagnosis of delusional states, a review of the literature is presented. Results of 2 experimental psychological investigations are discussed and are believed to underline the importance of perceptual disorders in patients with delusion. (19 ref)—*English abstract.*

12423. **Nachin, Claude.** [Against the idea of sharing the genesis of psychotic states.] (Fren) *Annales Médico-Psychologiques*, 1975(Jun), Vol 2(1), 199-204.—Endorses the view that all infants display a form of mental functioning analogous to that of the adult psychotic patient and that the genesis of all psychotic states outlasting earliest infancy is psychological, with their origin in the interpersonal relationships experienced during the long dependency state. The sociocultural etiology of mental disorder is considered primary.—*H. E. King.*

12424. **Nemeth, George A.** (McGill U., Montreal, Canada) Arousal and orienting response in psychopathological groups. *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5202.

12425. **Netley, C., Lockyer, Linda & Greenbaum, G. H.** (Hosp for Sick Children Toronto, Canada) Parental characteristics in relation to diagnosis and neurological status in childhood psychosis. *British Journal of Psychiatry*, 1975(Nov), Vol 121, 440-444.—Examined 26 psychotic children using the WISC or Stanford-Binet and EEGs. The parents of these patients were tested with the

Eysenck Personality Inventory and the Grid Test of Schizophrenic Thought Disorder. The mothers of children with the symptom of autism tended to have some cognitive disorganization, which was less common in the mothers of children without the symptom. The extraversion and neuroticism scores of all parents were not markedly different from population statistics. The incidence of EEG abnormality in the children was high and not related to diagnosis or other criteria. Findings are interpreted as providing suggestive evidence for a 2-factor theory of childhood psychosis. It is postulated that a neurological disorder is a necessary condition for the development of such a disorder and that a 2nd process related to parental characteristics is also involved, which has the effect of determining the particular symptomatic manifestations seen in the psychotic child. (17 ref)—*Journal abstract.*

12426. **Newmark, Charles S.; Frerking, Ruth A.; Cook, Louise & Newmark, Linda.** (U North Carolina, Medical School) Endorsement of Ellis' irrational beliefs as a function of psychopathology. *Journal of Clinical Psychology*, 1973(Jul), Vol 29(3), 300-302.—120 18-62 yr old neurotic and 98 16-54 yr old personality-disordered psychiatric inpatients and 120 normal undergraduates completed a true-false questionnaire about A. Ellis' irrational beliefs. The neurotic Ss endorsed 4 of the beliefs, in contrast to the normal and personality-disordered groups which did not endorse any of the ideas. The neurotic Ss also showed a significantly higher endorsement percentage on 8 of the irrational beliefs when compared with the other 2 groups of Ss. The normal and personality-disordered groups obtained markedly similar rejection frequencies on all 11 items. It is suggested that the irrational beliefs may be an indirect measure of chronic anxiety that is not usually prevalent among normal or characterologic groups.—*Journal summary.*

12427. **Oltmanns, Thomas F. & Neale, John M.** (State U New York, Stony Brook) Abstract conceptualization in schizophrenia: A fundamental psychological deficit? *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 807-811.

D. M. Wright (see PA, Vol 53:9828) argues that impairment in abstract conceptualization is an important schizophrenic deficit. The present authors contend that the data to which he refers are insufficient support for that conclusion. Although schizophrenics' performance on sorting tasks may be less efficient than that of some other groups, the significance of this finding is debatable. A differential deficit in conceptual ability has not been shown, and the confounding effects of 3rd variables have not been ruled out. In addition, the validity of sorting techniques in measuring abstraction has not been adequately established. These methodological issues have a more general applicability to the study of psychopathology. Appreciation of them and a more specific definition of "acceptable evidence" would reduce considerably the continuing state of confusion in research on psychological deficit. (15 ref)—*Journal abstract.*

12428. **Orenstein, Rosanne.** (Schenck U.) Comparison of two methods of teaching focusing to hospitalized psychiatric patients. *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5203.

12429. **Pascalis, G.; Chauvot, B. & Champanier, J.-P.** (U Reims, France) [Reduplication of psychogenesis by sociogenesis in schizophrenic syndromes.] (Fren) *Annales Médico-Psychologiques*, 1975(Jun), Vol 2(1), 197-199.—Employs a case history to illustrate how negative affects experienced during early growth and personality formation (i.e., rejection or parental ambivalence, unconscious wishes for the child's nonexistence, etc) can find a close parallel in affects of social origin experienced during critical periods of adulthood, which may contribute directly to a psychotic decompensation. In the case described, parental love-hate ambivalence toward the patient and an expressed regret for his birth were vividly re-experienced during young adulthood by social rejection of him as the issue of an occupying enemy soldier and the village no-good. This psychological reduplication was intolerable and led to his psychotic break and to subsequent persistent resistance to all attempts made for his resocialization.—*H. E. King.*
12430. **Petho, B.** [Social environment and symptoms of two schizophrenic groups.] (Fren) *Annales Médico-Psychologiques*, 1975(Jun), Vol 2(1), 153-166.—Compares symptoms and the course of illness for 2 schizophrenic subgroups, hebephrenic and cyclophrenic (schizo-affective disorder). Patients examined at the time of 1st hospitalization, on discharge, and 5 yrs later show distinctly different clinical patterning. Based on data gathered using the Rockland-Pollin scale (1965), the Factor Construct Rating Scale (Overall, 1968), the Gurland Structured Interview (1971) and supporting information from the Wechsler-Bellvue and Rorschach tests, and the Brengelmann adaptation (1969) of the Maudsley Personality Inventory, it is concluded that although nosologically specific factors play a decisive role in the severity of these conditions, the weight of social factors must also be taken into consideration. The penchant for resocialization at the time of leaving hospital, and the greater depth of experienced feeling typical of cyclophrenic patients, may play their part in the characteristic remission of their symptoms and clinical improvement. Hebephrenics continue to display grave affective disruption, although other symptoms may regress. On 5-yr follow-up there was relatively less difference in the severity of disorder between the 2 groups, but qualitative differences remained; hebephrenics were typically asocial, egocentric, and passive, while cyclophrenics continued to show sensitivity, altruism, and a greater degree of communicability and adaptability.—*H. E. King.*
12431. **Pine, Fred.** (Albert Einstein Coll of Medicine, Yeshiva U) On the concept of borderline in children: A clinical essay. *Psychoanalytic Study of the Child*, 1974, Vol 29, 341-368.—Discusses the attributes that differentiate "borderline" in children from those with more severe or milder symptoms and describes a variety of syndromes found in such children. It is suggested that their common feature is severe developmental failure or disturbed ego function and object relationship. (29 ref)
12432. **Postman, Robert J.** (California School of Professional Psychology, Los Angeles) The relationship of medications, paranoid symptomatology and premorbid status to schizophrenics' performance on a signal detection task. *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5229.
12433. **Presslich, O. et al.** [Clinical-psychopathological and electroencephalographic investigations of patients with delusions of the paranoid and the paraphrenic types.] (Germ) *Psychiatria Clinica*, 1975, Vol 8(1-2), 73-80.—Abnormal EEGs were found more frequently in patients with a paraphrenic syndrome; there was also a more frequent response to flickering lights than in the paranoid group. In addition, there was a more frequent response to flicker in patients with auditory hallucinations. Psychopathologically more florid delusional syndromes appear to produce abnormalities in the EEG more readily than do psychopathologically less elaborate syndromes. (15 ref) —*English abstract.*
12434. **Pull, C. & Pichot, P.** [On the concept of involuntional melancholia: An historical study.] (Fren) *Annales Médico-Psychologiques*, 1975(Oct), Vol 2(3), 571-582.—Traces the history of the "useful but imprecise" syndrome of involuntional melancholia, controversial since its introduction by E. Kraepelin in 1896. The definition, which is concerned with depressive pictures emerging for the first time after age 45 in women and 50 in men, continues to be carried in recent diagnostic manuals as well as in the international system for classifying mental disorders. Fewer clinical investigations are directed toward involuntional melancholia (also called involuntional depression, or reactive involuntional depression) than formerly, however, despite a growing concentration of psychiatric research on the biochemical and neuroendocrinological bases of depressive behavior. Since the diagnosis remains in popular use (in France, about half as many patients are so diagnosed as for manic-depressive psychosis), this historical review of the delineation of the concept and of the evidence for its genetic identity will, it is hoped, bring it under renewed research evaluation in the light of recent biological insights into the etiology of depressive disorder. (129 ref) —*H. E. King.*
12435. **Reker, Gary T.** (U Waterloo, Canada) Interpersonal conceptual structures of emotionally disturbed and normal boys. *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5207.
12436. **Retterstol, Nils.** [Nosological aspects of paranoid psychoses.] (Germ) *Psychiatria Clinica*, 1975, Vol 8(1-2), 20-30.—Stresses the lack of nosological entities in psychiatry and the necessity of a classification system. Paranoid symptoms are found in most types of psychoses, both functional and organic psychoses. Among the functional psychoses the schizophrenias often have a paranoid picture, and paranoid traits may be found even in the affective psychoses. The Scandinavian concept of reactive psychoses is presented, including reactive psychoses of paranoid, paranoid, and schizophreniform type. An author-conducted follow-up study is presented of paranoid psychoses after an observation time of 5-18 yrs. This study demonstrated that 81% of the patients with the discharge diagnosis of reactive psychoses were cured as against 23% of the patients with the discharge diagnosis of schizophrenia. A continuum is suggested of the paranoid psychoses from the schizophrenias via the schizophreniform and para-

noid reactive psychoses to the more affective psychoses with slight tendency to paranoid symptomatology. (30 ref)—*English abstract.*

12437. Rimmer, John D. (Washington U, St Louis) **The association between selected social, academic and genetic variables, and college student psychiatric illness.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 2), 6112.

12438. Ritvo, Samuel. (Yale U, Medical School, Child Study Ctr) **Current status of the concept of infantile neurosis: Implications for diagnosis and technique.** *Psychoanalytic Study of the Child*, 1974, Vol 29, 159-181.—Discusses infantile neurosis as the inner structure development, with or without manifest symptoms, which forms the basis of a later neurosis. The diagnosis and treatment of infantile neuroses are discussed, and case examples are presented. (28 ref)

12439. Rotenberg, Mordechai. (Hebrew U, Paul Baerwald School of Social Work, Jerusalem, Israel) **Psychopathy, insensitivity and sensitization.** *Professional Psychology*, 1975(Aug), Vol 6(3), 283-292.—The label "psychopathy" (by definition standing for multiple exaggerated normal behavior) is considered an empirically nonexistent phenomenon. A conception of a global psychopathic personality type and its diagnostic use for nontreatment is seen as obscuring the clinical-theoretical and functional implications inherent in differential manifestations associated with so-called psychopathy. The thesis is presented that (a) so-called psychopathy is in no way an incurable personality disorder; (b) behaviors subsumed under the rubric psychopathy are basically certain forms of insensitivities which are, at times, socially functional; and (c) dysfunctional insensitivity should hypothetically be treatable via differential sensitization techniques. A "pleasure-pain" matching sensitization treatment model is also presented. (39 ref)—*Author abstract.*

12440. Ruben, Margarete. **Trauma in the light of clinical experience.** *Psychoanalytic Study of the Child*, 1974, Vol 29, 369-387.—Discusses 2 kinds of traumatic situations—strain trauma and shock trauma—and presents the case histories of a 30-yr-old female and an adolescent female as illustrations of each.

12441. Saari, Carolyn. (Smith Coll, School for Social Work) **Affective symbolization in the dynamics of character disordered functioning.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 2), 6113.

12442. Schimek, Jean G. & Meyer, Roslyn M. (Yale U) **Dimensions of alienation and pathology.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 727-732.—Administered the Keniston Alienation Scale to 47 adolescent psychiatric hospital patients, to a control group of 78 college undergraduates, and to the staff ($n = 28$) of the psychiatric hospital. Three main factors emerged: Interpersonal Alienation, Self-Repudiation, and Cultural Alienation. The patient group scored much higher on the 1st 2 factors, but cultural alienation did not differentiate any of the groups and seems unrelated to pathology. Clinical data show that patients high on Self-Repudiation had a greater tendency toward withdrawal and depression, whereas those low on this dimension were characterized by anti-social behavior. Findings are discussed in relation to the clinical validity of the scale,

and the dangers of treating alienation as a unitary dimension.—*Journal abstract.*

12443. Schreiber, Sanford. (Yale U, Medical School) **A filmed fairy tale as a screen memory.** *Psychoanalytic Study of the Child*, 1974, Vol 29, 389-410.—Presents the case history of a 30-yr-old female who revealed repetitive associations to a filmed fairy tale throughout her analysis. It was determined that the film served as a screen memory to avoid experiencing the inner conflicts fixated by the separation from her mother during childhood. (31 ref)

12444. Shields, J. (U London, Inst of Psychiatry, England) **Some recent developments in psychiatric genetics.** *Archiv für Psychiatrie und Nervenkrankheiten*, 1975, Vol 220(4), 347-360.—Discusses the methods and results of recent family, twin, and adoption studies of childhood behavior disorders, crime, alcoholism, psychopathic personality, and neurosis. The data of E. Slater (1938) on the parents and children of manic-depressives are reanalyzed. Bipolar affective illnesses were more frequent in the families of bipolar than unipolar probands. There was no support for sex-linked inheritance in either group or for further genetic subdivision of the unipolar group according to age of onset or alcoholic or psychopathic family history. It is suggested that, for the present, 3 broad and etiologically overlapping clinical types of depression—bipolar, unipolar, and reactive—are adequate for diagnosis. (48 ref)—*Journal abstract.*

12445. Simon, Jane. **Love: Addiction or road to self-realization?** *American Journal of Psychoanalysis*, 1975(Win), Vol 35(4), 359-364.—Discusses both healthy and neurotic aspects of love. Neurotic sexual attachments are compared with drug addiction in terms of passivity, detachment, low self-esteem, and exploitation of others. The case history of a 25-yr-old woman treated for severe depression and suicidal thoughts is used to illustrate the destructive influence of neurotic, addictive love. It is argued that healthy, mature love excludes mutual exploitation and promotes individual growth and self-fulfillment in both partners. (20 ref)—*J. Adams-Webber.*

12446. Sizaret, P. & Engel, G. **[Psychotic decompensation in transplanted people.]** (Fren) *Annales Medico Psychologiques*, 1975(Jun), Vol 2(1), 182-184.—Reports 2 case histories to illustrate the decompensations typically found among transplanted foreign-national workers, members of large and increasing populations in Europe today. Key psychological elements in triggering psychotic decompensations, interacting with the biological substrate, are self-selection for foreign transient residence; differences in cultural level between the receiving and home countries; difficulties in both verbal and nonverbal communication; and all of the subtle ways in which the shared experience of one culture isolate it from another. Under the 1st stress of arrival in a new country, the "body-image" can be ruptured, in a sense, leaving the patient without points of reference or obvious recourse. Regression to a former state of libidinal fixation may occur, dependent on the structure of the personality. Acute episodes generally carry a good prognosis: the psychopathological material itself making evident the conflict of motives to be resolved. Decom-

pensations appearing only later, following an apparently good early adjustment, are more durable and carry a poor prognosis. In all cases, the patient "offers" his complaint to the physician to express a suffering located, in fact, outside his body. Eliminating an organic basis for presenting complaints provides an authentic service by helping to turn attention to the nonmedical origins of a problem.—H. E. King.

12447. Soriano Ortega, Manuel. (Facultad de Medicina de Sevilla, Spain) [Psychosis, depression, and suicide.] (Span) *Revista de Psiquiatria y Psicología Médica*, 1974(Apr-Jun), Vol 11(6), 359-375.—Summarizes theories and data on (a) suicide in psychiatry (the suicidal act, frustrated suicide, tentative suicide, and suicidal thoughts), and on (b) the causes and methods of suicide in depressions, schizophrenia, and other psychoses. Original data obtained from 520 patients over 3 yrs are also analyzed.—E. T. Czeschlik.

12448. Steinmeyer, Eckhard M. (Rheinische-Westfälische Technische Hochschule, Abteilung Psychiatrie, Aachen, W Germany) [An experimental evaluation of self-descriptions of depressive symptoms by psychopathological groups.] (Germ) *Zeitschrift für Experimentelle und Angewandte Psychologie*, 1975, Vol 22(2), 290-315.—Gave 8 sentences designed to reveal depressive symptoms twice to 4 groups of patients: schizophrenics, patients with cerebral atrophy, and endogenous and reactive depressives. The sentences were judged 1st on a 9-step scale along the continuum "does not apply—applies very strongly," then in a paired comparison of all 28 combinations of the 8 sentences. Results indicate that self-evaluation by patients is not helpful in diagnosis, therefore diagnostic tools like the MMPI are of doubtful value. (English & French summaries) (30 ref)—W. J. Koppitz.

12449. Straube, Eckart. (U Tübingen, Nervenlinik, W Germany) [Experiments on perception in schizophrenia.] (Germ) *Archiv für Psychiatrie und Nervenkrankheiten*, 1975, Vol 220(2), 139-158.—Tested acute and chronic schizophrenic Ss with 6 simple experimental tasks of visual stimulus selection. The 2 control groups were a group of nonpsychiatric Ss and one of patients with other psychiatric diagnoses. The 6 tasks represented 3 different types of attention: differentiation between figure and background, concentration, and visual integration. Results show that the acute group with paranoid psychosis and hallucinations made significantly more mistakes in figure-background differentiation. There was no difference between this group and the other patients in the concentration tasks. Both schizophrenic groups performed more poorly in visual integration. Results are discussed in light of information theory and Sokolow's psychophysiological model of stimulus selection. The hypothesis is suggested that in the acute schizophrenic group a disturbance in an arousal-modulation system was responsible for attenuation of irrelevant input. (35 ref)—English summary.

12450. Sugar, Max et al. (Louisiana State U Medical School) Use of college-student companions for psychotic children to avoid hospitalization. *Journal of the American Academy of Child Psychiatry*, 1975(Spring), Vol 14(2), 249-267.—A project to avoid hospitalizing psychotic children included 15 such children, 3-11 yrs old,

who were treated as outpatients for 4 yrs. In addition to the usual therapeutic treatments, each child was assigned a nonprofessional companion, who spent 10 hrs/wk with the child engaged in activities chosen by the child. During the 4-yr period none of the children were hospitalized. A 3-yr follow-up revealed that 5 had been hospitalized and 8 had maintained their improvement. (19 ref)—Journal summary.

12451. Tringer, L. [Mental disorder from the standpoint of socialization.] (Fren) *Annales Médico-Psychologiques*, 1975(Jun), Vol 2(1), 141-152.—Reviews the literature, mostly British-American, on the effect of family behaviors on socialization of the growing child. Negative parental behaviors can influence the development of internalized controls in the child indirectly, by a confusion of the normal processes of identification, or directly via the mechanism of punishments allocated. Although a relationship between neurotic and psychopathic reaction patterns and faulty socialization is widely accepted, the contribution of deficient socialization to psychosis remains equivocal. The developing personality requires positively and long-lasting interpersonal connections, not necessarily provided by the parents. A demanding authoritarian attitude by care-givers fails to furnish the internalizable moral norms needed for healthy growth. Although these are matters of the utmost concern to medicine from the preventive point of view, encouraging the adoption of positive practices is a responsibility falling well outside the usual medical province. (59 ref)—H. E. King.

12452. Vogel, H. P. (Freie U Berlin, Psychiatrische Klinik, W Germany) [The influence of early brain damage on psychic diseases in adulthood: A study documented by the AMP system.] (Germ) *Archiv für Psychiatrie und Nervenkrankheiten*, 1975, Vol 220(4), 361-371.—Evaluated the data on 1,926 psychiatric inpatients, documented by the AMP system, with respect to early brain damage. There were 82 cases (4.26%). For each patient with early brain damage a control case matched for age, sex, and diagnosis was selected. The highest frequency for early brain damage was found in the diagnostic group which also contained the psychic disturbances in epilepsy. Among neuroses and schizophrenia the item was found with the average frequency in the total psychiatric population. It was underrepresented among affective psychoses and involutional diseases. Hypotheses concerning the uneven distribution over the diagnostic spectrum are discussed with emphasis on the fact that hypoxic perinatal disturbances do not lead to diffuse and unspecific consequences, but predominantly to a sensory impairment and possibly to a deficit in the aminergic system. Early brain damage is also discussed as one mode of the transmission of psychic diseases. (37 ref)—English abstract.

12453. Wetzel, Richard D. (Washington U. Medical School, St Louis) Ratings of life and death and suicide intent. *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 879-885.—48 suicide attempters, 56 suicide threateners, and 50 nonsuicidal controls, all White psychiatric patients, rated the concepts life and death with the semantic differential and also completed the Self-Rating Depression Scale and the Beck Optimism-Pessimism Scale. Ratings of life and life minus death significantly

discriminated between suicidal and nonsuicidal Ss and between more and less suicidal Ss. Changes in evaluation of life were significantly associated with changes in self-rated suicide intent. Evaluation of life was more sensitive than other life factor scores to suicide behavior and suicide intent.—*Journal abstract.*

Behavior Disorders & Antisocial Behavior

12454. ———. [Case studies of socioeconomic and personality characteristics of juvenile delinquent users of volatile substances.] (Span) *CEMEF Informa*, 1975(Apr), Vol 3(4), 12-17.—Examines the personality of 6 drug users and the social context in which their personality developed. Data were obtained via specially constructed questionnaires and a battery of psychological tests on the Ss' socioeconomic background, personality traits, and pattern of drug use. Results show poor education, low social status, unstable family conditions, intellectual deficiency, and frequent depressions. Drug use was begun between the ages of 13-15, out of curiosity and instigated by friends. Infractions like theft and intoxication on the street led to detentions.—*E. T. Czeschlik.*

12455. Appelbaum, Ann W. & Klemmer, Herbert. *Shoplifting. Menninger Perspective*, 1974(Fal), Vol 5(3), 16-19.—Surveys some social and psychological factors involved in shoplifting. Social causes include societal emphasis on competition, poverty, and rebellion against societal norms. Psychologically, shoplifting is discussed as a symptom of sociopathic, neurotic, and, to a lesser degree, more severe mental disorders. Treatment procedures vary with the individual case. Children need to be dealt with through their parents, while teenagers often respond better to their peers. More disturbed individuals may require outpatient or inpatient treatment. Fear of punishment is often an effective deterrent. —*D. H. Lamb.*

12456. Bak, Robert C. (Montefiore Hosp & Medical Ctr. New York, NY) *Distortions of the concept of fetishism. Psychoanalytic Study of the Child*, 1974, Vol 29, 191-214.—Reviews the literature on fetishism and examines the role inanimate things play in the maturation of infant, child, adolescent, and adult perversions. Discrepancies in the use of key concepts are noted. The differentiation between the phase-specific quality of fetishes and the use of inanimate things and their changing functions are also discussed. (37 ref)

12457. Baldwin, J. A. & Oliver, J. E. (U Oxford, Unit of Clinical Epidemiology, England) *Epidemiology and family characteristics of severely-abused children. British Journal of Preventive & Social Medicine*, 1975(Dec), Vol 29(4), 205-221.—Studied severe child abuse in north-east Wiltshire retrospectively during 1965-1971 and prospectively for 18 mo from January 1972, after a period of consultative activity with those actively involved to increase awareness of the phenomenon. Severe abuse was strictly defined. A rate of 1/1,000 children under 4 yrs old was obtained, together with a death rate of 0.1/1,000. The 34 families of the retrospective series of 38 abused children were studied in detail, and identifying characteristics of large family size, youthfulness, low social-class, instability, and gross psychiatric, medical, and social pathology are described. Implications of the ascertainment and death rates are

discussed in relation to data from some other studies, and the need is emphasized for detailed studies of the apparent clustering of disorder in the families, using linked record systems. (53 ref)—*Journal abstract.*

12458. Batta, I. D.; McCulloch, J. W. & Smith, N. J. A study of juvenile delinquency amongst Asians and half-Asians. *British Journal of Criminology*, 1975(Jan), Vol 15(1), 32-42.—Examined the relation between delinquency and ethnicity in Bradford, England. Despite flaws inherent in studies based on official crime statistics, results show that half-Asians have a delinquency rate 5 times that of the Asian group and twice that of the rest of the population. Lack of cultural stability and confused personal identity may account for the findings. (21 ref)—*A. K. Hess.*

12459. Beckman, Linda & Bishop, Barbara R. (U California, Los Angeles) *Cooperation of acting-out adolescents: Reactions to the "lapsed saint" and "reformed sinner" strategies. Journal of Clinical Psychology*, 1973(Jul), Vol 29(3), 322-325.—43 hospitalized acting-out and 56 normal 15-18 yr olds participated in a 30-trial prisoner's dilemma bargaining game in 1 of 2 feedback conditions. In the lapsed saint (LS) strategy, the other player assumed an unconditionally cooperative manner and then switched to a more competitive stance. The reformed sinner (RS) assumed a competitive strategy and then became cooperative. While both groups were similar in their choices on initial trials, differences in game-playing behavior occurred on later trials. As predicted, the normal Ss showed significantly higher levels of cooperation in the RS condition than in the LS condition, while the hospitalized Ss did not. The hospitalized Ss tended to be higher in suspicion in the RS condition and higher in risk-taking in the LS condition than normals. Moreover, the acting-out Ss showed less overall exploitation than normals. Sex differences revealed a complex pattern of interaction with population and strategy; however, females cooperated more than males on later trials.—*Journal summary.*

12460. Birchmore, Doreen F. & Walderman, Rodeen L. (Donwood Inst Day Clinic, Toronto, Canada) *The woman alcoholic: A review. Ontario Psychologist*, 1975(Oct), Vol 7(4), 10-16.—Reviews the literature on female alcoholism and concludes that there has been a lack of research directed specifically at this subject. Several areas warranting further study are delineated. —*A. Krichew.*

12461. Blackburn, R. (U Aberdeen, Scotland) *An empirical classification of psychopathic personality. British Journal of Psychiatry*, 1975(Nov), Vol 127, 456-460. Personality profiles (as measured by the WAIS and MMPI) of 79 nonpsychotic male offenders admitted to a security hospital were subjected to a cluster analysis. 4 profile types were generated, classifying % of the sample, and differences were found between the types in previous antisocial behavior. 2 of the types were identifiable as primary and secondary psychopaths, while the remaining 2 showed little resemblance to the concept of the psychopathic personality. The primary psychopaths were extraverted but not neurotic, while the secondary psychopaths were neurotic, but not extraverted. Both were highly impulsive but distinguished by a dimension of sociability-withdrawal.—*Journal abstract*

12466. Dengerink, H. A. & Bertilson, H. S. (Washington State U) Psychopathy and physiological arousal in an aggressive task. *Psychophysiology*, 1975(Nov), Vol 12(6), 682-684.—Measured heart-rate level (HRL) and both dorsal and palmar skin conductance level (SCL) of 92 male psychopathic, mixed diagnosis, and nonpsychopathic prison inmates while Ss were engaged in the Buss aggression task. The mixed and psychopathic groups evidenced HRLs which were significantly higher than those of the nonpsychopathic group during the later trial blocks. The nonpsychopathic group increased palmar SCLs across trial blocks, while no such changes were observed for mixed and psychopathic groups. No differences between groups were observed in the dorsal SCL measures. It is suggested that this pattern of low SCL together with elevated HRL, reported previously for psychopaths in conditioning or "count-down" situations with electric shock, may also appear in psychopaths engaged in a mildly stressful social interaction.—*Journal abstract*.

Lexington, KY) **The use of the Personality Research Form with alcoholics: Effects of age and IQ**. *Journal of Clinical Psychology*, 1973(Jul), Vol 29(3), 378-379.—Reevaluated the effects of age on the Personality Research Form (PRF) scale scores of alcoholics reported by H. Hoffman (see PA, Vol 45:6613). A multivariate analysis of variance yielded no significant age effects among the PRF scores of 104 White inpatient male alcoholics when they were divided into the 4 Hoffman age groups (under 34, 35-44, 45-55, and over 55). There were, however, 3 significant correlates between alcoholics' Shipley-Institute for Living Scale for Measuring Intellectual Impairment IQ scores and the PRF Understanding, Aggression, and Abasement scales.—*Journal summary*.
12473. Guze, Samuel B. (Washington U Medical School) **Criminality and psychiatric disorders**. New York, NY: Oxford U Press, 1976. \$9.50.—Reviews the findings of a long-term study of 233 male and 66 female felons, and details the investigative techniques used to define and diagnose psychiatric disorders among them. Sociopathy, alcoholism, and drug dependence are identified as being associated with major crime. (104 ref)
12474. Hasenpusch, Burkhard & Hommers, Wilfried. [A contribution to the measurement of tension tolerance of juvenile delinquents.] (Germ) *Zeitschrift für Experimentelle und Angewandte Psychologie*, 1975. Vol 22(4), 600-612.—Adapted the checklist, originally developed by J. S. Stumphauer, to evaluate tension tolerance in 234 juvenile delinquents 14-21 yrs old. Tension tolerance is operationally defined as postponement of immediate gratification in exchange for higher rewards at a later time. The recorded savings behavior of Ss in a hypothetical situation was taken as criterion for the validity of their responses to the checklist. Responses showed no relation to the criterion measure or to the age of Ss. The use of such checklists as a basis for forensic decisions cannot be recommended unless further investigations yield more positive results. (English & French summaries)—*W. J. Koppitz*.

12477. Holland, Terrill R. & Holt, Norman. (California Inst for Men, Chino) **Personality patterns among short-term prisoners undergoing presentence evaluations**. *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 827-836.—The MMPI profiles of 295 male short-term prisoners were cluster-analyzed, resulting in 4 distinct groups. These groups differed in IQ, on recidivism-related characteristics reflected in California Base Expectancy Scale (Form 61A) score, and an estimate of extensiveness of arrest record, and on type of psychiatric-psychological recommendation made to the referring courts. However, they did not differ on age, educational level, or the severity of their offenses. In comparing these results with those of other typological investigations of

offender groups, it is tentatively concluded that short-term prisoners being considered for probation seem less emotionally disturbed than those serving sentences for custodial or other purposes. (39 ref)—*Journal abstract.*

12480. Jones, Barbara P.; Moskowitz, H. R.; Butters, N. & Glosser, G. (VA Hosp. Psychology Service, Boston, MA) **Psychophysical scaling of olfactory, visual, and auditory stimuli by alcoholic Korsakoff patients.** *Neuropsychologia*, 1975(Oct), Vol 13(4), 387-393.—10 male alcoholics with Korsakoff's psychosis, 10 alcoholic controls, and 10 nonalcoholic controls (mean ages, 57, 56.7, and 56.4 yrs, respectively) performed psychophysical scaling of the intensity of stimuli in the visual, auditory, and olfactory modalities. Whereas the Korsakoff patients displayed normal scaling judgments in all 3 visual tasks and in 2 out of 3 auditory tasks, they evidenced a severe deficit in their scaling of olfactory stimuli; Korsakoff Ss had elevated thresholds for the perception of olfactory stimuli. Results are consistent with previous findings of an olfactory sensory impairment in alcoholic Korsakoff patients and may be attributable to damage to diencephalic and limbic brain structures in this disease. (French & German summaries)—*Journal abstract.*

12481. Knight, B. J. & West, D. J. (Cambridge U, Inst of Criminology, England) **Temporary and continuing delinquency.** *British Journal of Criminology*, 1975(Jan), Vol 15(1), 43-50.—Studied data from interviews with 81 18-19 yr old males, classified in 2 groups. 33 were "temporary delinquents," who had had no criminal convictions since age 17 and did not admit to having committed any of 6 types of theft. 48 "continuing delinquents" had had 1 or more convictions since age 17 and admitted committing 1 or more of the 6 offenses. Analysis of interviews indicated factors distinguishing the 2 groups. Continuing delinquents had had more serious records as juvenile offenders than temporary delinquents, less often committed crimes for "fun" or excitement, committed offenses alone rather than in company, maintained more contact with peer groups, had more criminal family members, and were more often from a low-income stratum. "The consequences of being caught" was often the reason given by the temporary delinquents for becoming law-abiding. Continuing delinquents saw no benefit in the experience of conviction and custody.—A. K. Hess.

12483. Lukianowicz, N. **Suicidal behaviour: An attempt to modify the environment: IV.** *Psychiatra Clinica*, 1975, Vol 8(3), 140-154. Performed a study with 76 male patients (following suicidal attempts)

admitted in 1962 and 1963 to a psychiatric hospital in Northern Ireland. Personal and social factors of Ss were reviewed, and the findings were compared with the findings in (a) 100 suicidal females treated in the same hospital for the same reason during the same period, (b) a group of 45 suicidal males admitted to the same hospital in 1971, and (c) a group of 91 suicidal female Ss treated in the hospital in 1971. The aim of the inquiry was to determine whether (a) there were any sex-linked differences between these groups, (b) there were any changes in methods used in suicidal attempts in the last decade, and (c) the hypothesis on gain-motivation in many suicidal attempts was correct. Results show that (a) sex and all personal and social factors reviewed were of little significance in the incidence of suicidal attempts and in the methods employed in their execution; (b) in both 1971 groups there was a shift from violent to nonviolent means; and (c) $\frac{1}{2}$ of all patients, irrespective of sex, social class, religion and similar factors not only claimed having tried to achieve some personal gains, but apparently did achieve them by their suicidal behavior. This seems to support the hypothesis that in many cases suicidal behavior is in fact an attempt to modify the environment to the patient's benefit.—*Journal abstract.*

12486. Neviano, Vincent J. & Gross, William F. (VA Hosp, Lexington, KY) **A multivariate delineation of two alcoholic profile types on the 16 PF.** *Journal of Clinical Psychology*, 1973(Jul), Vol 29(3), 371-374.—Applied the M. Lorr multivariate typing technique to the 16 PF profile data of 2 samples of 200 chronic alcoholic males (mean age, 24 yrs). Two replicated and highly discriminable types were derived that accounted for 26% and 5% of the total population, respectively. The 1st type was best described in terms of high anxiety and introversion, whereas the 2nd seemed characterized by dependence and conformity.—*Journal summary.*

12487. Okulitch, Peter V. (U Wisconsin) **A comparison of response perseveration in alcoholics, heroin addicts and normals.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5202-5203.

12488. Ono, Naohiro; Kataoka, Gito & Shindo, Hitomi. (Osaka Juvenile Detention & Classification Home) **[A basic research for MMPI-profile interpretation: Normative data for the juvenile sample.]** (Japn) *Japanese Journal of Criminal Psychology*, 1969(Sep), Vol 6(2), 60-66. Attempted to isolate basic structural factors in interpreting MMPI profiles of juvenile delinquents. Normative data of 533 male and 139 female delinquents were compared with those of 340 male and 216 female high school students. Data were studied according to reliability scales, clinical scales, and profile codes. In terms of reliability, by using the F and L subscales an approximately equal number of delinquents and nondelinquents were screened as the final sample.

Results question the *F* subscale as a measure of reliability, since a high *F* score was related not only to low reliability but also to greater delinquency, lower IQ, and lower CA. Among the clinical subscales, statistically significant differences were observed between the mean scores of delinquent and nondelinquent groups on *Hs*, *D*, *Pd*, *Pa*, *Pr*, *Sc*, and *Si* for males, and on *D*, *Pd*, *Mf*, *Pa*, *Sc*, and *Si* for females. Comparison of profile codes revealed that 40% of the delinquent group, males and females, had a strong *Pd* pattern, while among the general group the *Ma* pattern was prominent for boys and the *Si* pattern for girls.

12489. Osterhoff, William E. (U Alabama) **MMPI changes in the youthful offender during incarceration.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5173.

(U California, Ctr for the Health Sciences, Los Angeles) **Child trauma intervention: A community response to family violence.** *Journal of Clinical Child Psychology*, 1975(Fal), Vol 4(3), 26-29. —Briefly reviews child abuse, including history, theory, family concomitants, and a statement of the community's role in dealing with this problem.—W. V. Adams.

12491. Rodin, Judith. (Yale U) **Effects of obesity and set point on taste responsiveness and ingestion in humans.** *Journal of Comparative & Physiological Psychology*, 1975(Nov), Vol 89(9), 1003-1009.—Two experiments, with a total of 120 undergraduates, investigated the relationships among degree of obesity, nearness to set point for adipose tissue mass, and responsiveness to taste. In Exp I, Ss rated milkshakes varying in sweetness intensity. Overweight and normal weight Ss did not have significantly different detection thresholds or preference ratings. However, overweight Ss worked longer than normals to obtain their most preferred substance. Exp II varied the ease of tasting the milkshake. Preference and food intake of moderately overweight Ss were significantly more influenced by tastes that they found positive and negative than was the preference of normal weight or obese Ss. The ease of ingesting the taste substance also significantly influenced preference and food intake of the moderately obese only. Nearness to set point, operationally defined as weight stability for 2 yrs, had no significant effects. (27 ref)—*Journal abstract*.

12492. Schneer, Henry I.; Perlstein, Abraham & Brozovsky, Morris. (State U New York, Downstate Medical Ctr, Brooklyn) **Hospitalized suicidal adolescents: Two generations.** *Journal of the American Academy of Child Psychiatry*, 1975(Spr), Vol 14(2), 268-280. —Between 1960 and 1970 the rate of hospital admissions for suicidal behavior among adolescents of lower socioeconomic status in Brooklyn doubled. Among the 2nd-generation ethnic subgroups the Black girls, the Puerto Rican boys, and the White boys all showed a statistically significant increase in rate of admissions for suicidal behavior. These adolescents tended to be more malignantly disturbed emotionally, drug-abusing, truant, and suicidally repetitious than the 1st-generation group. Under the survey method employed, extrinsic sociological factors could not be isolated from intrinsic psychodynamic factors which interact during adolescence to provoke suicidal behavior. (22 ref)—*Journal summary*.

12496. Tooley, Kay. (U Michigan, Medical Ctr) **The small assassins: Clinical notes on a subgroup of murderous children.** *Journal of the American Academy of Child Psychiatry*, 1975(Spr), Vol 14(2), 306-318.—Presents 3 cases which suggest the motive and method of the assault might have been well understood by these children although the biological reality of the results of their actions was not. All shared a wish to be rid of the younger sibling, assaulted. Parents were startlingly complacent and unconcerned with the dangerous extremes of their children's behavior.—R. M. Cohen.

12497. Vinson, T. & Homel, R. (New South Wales Bureau of Crime Statistics & Research, Sydney, Australia) **Crime and disadvantage: The coincidence of medical and social problems in an Australian city.** *British Journal of Criminology*, 1975(Jan), Vol 15(1), 21-31. —Explored social problems in minor suburbs in Newcastle, Australia, and how these problems are related to health and the incidence of delinquency. Nine medico-social indices were computed: contact with social agencies, premature births, perinatal mortality, "notifiable" diseases, mental hospital admissions, truancy, school exemptions, unemployment, and divorce separation. Statistical analysis showed that 3 of these variables—contact with social agencies, truancy, and unemployment—constituted in combination a "high risk factor" which might identify neighborhoods in special danger of developing medico-social pathology. Of the 15 suburbs that ranked highest in this general risk factor, 12 were also among the 15 suburbs with the highest delinquency rate. These and other comparisons show that delinquency is a central feature of the structure of social disadvantage. (19 ref)—A. K. Hess.

12498. Werner, Eric. (California Youth Authority, Div of Research & Development, Community Treatment Project, Sacramento) **Psychological and ethnic correlates of interpersonal maturity among delinquents.** *British Journal of Criminology*, 1975(Jan), Vol 15(1), 51-68.—Explored how closely the diagnosis of interpersonal maturity level (I-level) is related to ethnicity, personality patterns, and intelligence. The California Psychological Inventory (CPI) and the nonverbal scale of the California Test of Mental Maturity (CTMM) were administered to 934 males participating in California's Community Treatment Program between 1961 and 1971. Cluster analysis of CPI scores showed solutions for White and Black Ss to match. Three clusters were produced: Adult-Role Socialization; Ascendant Extraversion; and Personal Maturity. Combinations of the 3 clusters yielded 6 personality types. Two basic patterns

can depict the 6 types, with Ascendant Extraversion (interpersonal development) appearing critical in determining I-level. Proportionately more Whites were I, and Blacks I, than expected. The correlation .27 between I-level and intelligence indicates some relationship, the dynamics of which are not clear.—A. K. Hess.

12499. Wheeler, Charles A. (Florida State U) **The relationship between psychopathy and the weak automatization cognitive style.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5214-5215.

Learning Disorders & Mental Retardation

12501. Bender, Lauretta. **A fifty-year review of experiences with dyslexia.** *Bulletin of the Orton Society*, 1975, Vol 25, 5-23.—Discusses the author's sustained interest in brain-behavior relationships, the development of the Bender-Gestalt test, and the relationship between maturational development and reading disabilities. (2 p ref)—G. Alley.

12502. Birchard, Miriam L. & Crowl, Thomas K. (Richmond Coll, City U New York) **Attention in performance of a complex skill by retarded children.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 860-862.—Used "Try" materials to train 9 5-7 yr old retarded children to attend to differences in colors and shapes of objects. Frostig worksheets were used to train the Ss to attend to left-to-right directionality. Evidence suggests Ss' ability to attend to these characteristics was generalized to a complex bead-stringing task. On the latter, significant gains in performance were found immediately after 15 days of practice with training materials and after a 6-mo interval of no further training or practice.—*Journal abstract.*

12503. Danwitz, M. Winifred. (Coll of New Rochelle, Special Education Graduate School) **Early speech and language problems.** *Bulletin of the Orton Society*, 1975, Vol 25, 86-90. Briefly describes the normal development of language and associative factors of language development. An outline is suggested for the comprehensive evaluation of speech and language problems which can lead to later cognitive and affective disorders.—G. Alley.

12504. Doyle, Robert B.; Anderson, Robert P. & Halcomb, Charles G. (VA Hosp, Day Hosp & Treatment Ctr, North Little Rock, AR) **Attention deficits and the effects of visual distraction.** *Journal of Learning Disabilities*, 1976(Jan), Vol 9(1), 48-54.—Examined the effects of a visual distractor on vigilance task performance in 35 learning disabled (LD) and 35 normal 8-12 yr olds. The vigilance task provides quantitative measures of the attentional deficit which is characteristic of many LD children. Results support previous findings that LDs tend to have a lower correct detection rate and higher false alarm, or random response, rate than normals. Detailed analysis supported the idea that most of the differences between these 2 broad groupings of children could be attributed to the hyperactive LDs. Results provide further support for the notion that the param-

eters of constructs such as learning disability can be investigated and brought under experimental control. (15 ref)—*Journal abstract.*

12505. Evans, P. L. & Hogg, J. H. (U Manchester, Hester Adrian Research Ctr, England) **Individual differences in the severely retarded child in acquisition, stimulus generalization, and extinction in go-no-go discrimination learning.** *Journal of Experimental Child Psychology*, 1975(Dec), Vol 20(3), 377-390.—Individual differences in 27 institutionalized and noninstitutionalized severely retarded children (mean verbal age, 4.5 yrs) as measured by a questionnaire were related to dependent variables measured in a discrete trial successive go-no-go intradimensional discrimination learning study, followed by stimulus generalization tests on a hue continuum and extinction trials. Significant correlations were found between the number of intersignal responses in learning, responding to and around the nonreinforced stimulus (S-), types of errors in extinction, and the S's position on an excitation-inhibition dimension based on clinical descriptions of the behavior of the retarded given by A. R. Luria (1963). (24 ref)—*Journal abstract.*

(Columbia Presbyterian Hosp, Robinson Reading Clinic, New York, NY) **The marginally ready child.** *Bulletin of the Orton Society*, 1975, Vol 25, 69-85.—Discusses the need to identify the immature primary-age child who has marginal language disabilities. The characteristics of this type of child in the 1st grade and in intermediate grades are discussed.—G. Alley.

12511. Kertesz, Andrew & McCabe, Patricia. (U Western Ontario, London, Canada) **Intelligence and aphasia: Performance of aphasics on Raven's Coloured Progressive Matrices (RCPM).** *Brain & Language*, 1975(Oct), Vol 2(4), 387-395.—Explored intellectual impairment in aphasia and investigated the role of language in the performance of Raven's Coloured Progressive Matrices (RCPM). Nonverbal intelligence was measured by the RCPM in 111 aphasics and 52 controls, whose language function was scored by the Western Aphasia Battery (WAB). Ss were classified according to taxonomic criteria, based on the WAB scores. Results indicate that Global, Wernicke's, and Transcortical Sensory aphasics performed poorly on the

RCPM. Common to all these was poor comprehension. Broca's Transcortical Motor, Conduction, and Anomic aphasia do as well as nonaphasic controls with diffuse brain damage or nondominant hemisphere lesions. The RCPM performance does not seem to be related directly to the severity of aphasia. In addition to comprehension, drawing scores appeared to correlate best with RCPM scores. Data suggest that "nonverbal" intelligence is also impaired in aphasia to a variable extent, but 42% of aphasia performed as well as the controls without brain damage on the RCPM.—*Journal abstract.*

12514. Leong, C. K. (U Saskatchewan, Inst of Child Guidance & Development, Saskatoon, Canada) **Dichotic listening with related tasks for dyslexics: Differential use of strategies.** *Bulletin of the Orton Society*, 1975, Vol 25, 111-126.—58 dyslexic children were equated on CA, sex, and nonverbal ability to 58 nondisabled readers to compare the efficiency of the 2 groups in using preinstructed strategies in reporting dichotic materials. Two major dichotic listening experiments used a combination of alphabetic letters and digits. In Exp I, Ss were to report information heard in 1 ear and then in the other. Exp II required the Ss to report either all digits and then all letters, or visa versa. Two methods of scoring were used: (a) serial position and (b) free scoring of all correct elements irrespective of ear, type of material, or serial position. Results showed a significant difference between the groups when serial position scoring was used, irrespective of which ear or type of material was used. It is concluded that dyslexic children are inefficient in using strategies to process dichotic materials. A subsidiary experiment, using the Figure Copying Test and an auditory-visual coding task to determine the effects of perceptual and memory processes, found perceptual processing deviations in the dyslexic group. Notes that parent counseling and parent education procedures are increasingly being recognized as important interventive mental health strategies. A parent education group which focuses on the learning disabled (LD) child and provides parents with a survey of specific

learning disabilities is described. Factual information and emotional support are provided in the program in a series of 6-8 group sessions. The content areas include LD definitions, laterality and directionality, visual perceptual difficulties, auditory perception problems, and perceptual-motor issues. Parents are involved in experiential activities designed to help them experience the world of LD persons. Time is provided for open-ended discussion of specific problems. Feedback from parents has indicated a very positive response. (16 ref)—*Journal abstract.*

Rosen) on the following aspects of mental retardation: (a) research laboratories and clinics, (b) institutional changes, (c) the impact of genetics, (d) light on the horizon, and (e) the 1960's and 1970's.

12523. Satz, Paul; Friel, Janette & Goebel, Ron A. (U Florida) **Some predictive antecedents of specific reading disability: A three-year follow-up.** *Bulletin of the Orton Society*, 1975, Vol 25, 91-110. Reports the 3rd-yr criterion follow-up of 497 boys who had been tested at the beginning of kindergarten in 1970 on a battery of developmental and neuropsychological measures designed to forecast later reading achievement at the end of Grade 2 (1973). The purpose of the 3-yr study was to evaluate a theory of developmental dyslexia which purports to identify the early (prereading) precursors of dyslexia. Results, based on linear discriminant function analyses, revealed a highly predictive classification of children especially those destined to reach both extremes of the reading distribution in year 3. The results, which were compatible with the underlying theory, were converted to utility tables to demonstrate their applica-

tion for early intervention decisions by educators. (15 ref)—*Journal abstract.*

Johnstone Training & Research Ctr, Bordentown, NJ) **Development of the formation of categories by normal and retarded persons.** *Developmental Psychology*, 1976(Mar), Vol 12(2), 125-131.—Investigated the development and fragmentation of categories over CA and MA without the requisite of free recall. 26 kindergartners, 26 4th-graders, and 21 9th-graders, and 24 noninstitutionalized retarded pupils (CA, 11.89 yrs; MA, 8.46 yrs) labeled and categorized 480 chromatic slides of picturable objects. As age increased (a) more categories and superordinates congruent with adult criteria were elicited, (b) more superordinates were formed with more items per superordinate, (c) fragmentation of categories increased, and (d) normal Ss were more efficient in the formation of reliable categories than retarded Ss. Results are compared with other developmental and comparative studies in clustering, emphasizing the importance of the availability and accessibility of superordinates in the development of clustering ability. 12530. Horii, Yoshiyuki & Weinberg, Bernd. (Purdue U) **Intelligibility characteristics of superior esophageal speech presented under various levels of masking noise.** *Journal of Speech & Hearing Research*, 1975(Sep), Vol 18(3), 413-419.—Used broad-band masking of speech to assess the effects that broad-band masking noise had upon the recognition of consonants and vowels produced by esophageal speakers. 2 superior esophageal speakers, 1 man and 1 woman, provided the speech materials. Listeners were 16 college students. Procedures were developed to compare the articulation functions of

superior esophageal speech with those of normal speech under comparable levels of masking noise. Articulation functions for vowels were essentially the same for esophageal and normal talkers (4%/db). For consonants, the intelligibility scores for esophageal speech were 12-14% lower than for normal speech under adverse noise conditions. Gains in the consonant articulation functions were 2.5%/db and 4%/db for normal and esophageal talkers, respectively. For adverse noise conditions, the lowered consonant scores for esophageal speakers were the result of poorer than normal intelligibility for liquid-glides and nasal and, secondarily, for stop consonants. Additional differences between the intelligibility characteristics of esophageal and normal speech were found in word-position and voicing features.—*Journal abstract.*

12537. Sommers, Ronald K.; Brady, William A. & Moore, W. H. (Kent State U, Speech & Hearing Clinic) **Dichotic ear preferences of stuttering children and adults.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 931-938.—39 stuttering and 39 normal speaking 4-48 yr olds indicated their ear preferences for dichotically presented words and digits. A single response mode for both dichotic words and digits was selected to study speech perception. Stutterers showed significantly less of the normal right-ear preference for dichotic words and digits. The proportion of stutterers who failed to demonstrate a right-ear preference for dichotic words was significantly greater than for nonstutterers. 18% of the stutterers and none of the nonstutterers showed reversed or a left-ear preference for dichotic digits. Although nonstuttering children and adults performed alike on the dichotic tasks, the right-ear dichotic-words scores of stuttering children were significantly smaller than those of adult stutterers. Results are related to an early notion that stuttering may be related to mixed

dominance, and to recent evidence showing that large percentages of older stuttering children show spontaneous remission of stuttering. (22 ref)—*Journal abstract.*

12538. Stanley, Gordon. (U Melbourne, Parkville, Australia) **Two-part stimulus integration and specific reading disability.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 873-874.—29 8-12 yr old dyslexics and 21 age-matched controls were presented with 2 halves of a black cross, one-half being presented at varying interstimulus intervals after the other half. Both dichoptic and binocular presentations were used, and separation thresholds were at greater interstimulus intervals for the dichoptic condition. Dyslexics had thresholds at greater intervals than controls. These differences were significant, and there was no significant interaction of group by dichoptic condition. The relative magnitudes of difference between dyslexics and controls were as previously reported by G. Stanley and R. Hall (see PA, Vol 52:12741) and support the notion that dyslexics have longer visual persistence than controls.—*Journal abstract.*

12539. Young, Martin A. (Illinois State U) **Observer agreement for marking moments of stuttering.** *Journal of Speech & Hearing Research*, 1975(Sep), Vol 18(3), 530-540.—Asked 4 observers to mark moments of stuttering on transcripts of tape-recorded speaking performances. Instructions to observers were varied in an attempt to maximize agreement. An index of agreement was developed to reflect word-by-word agreement for more than 2 observers. Results show less word-by-word agreement than might have been expected, although intercorrelations among observers for total number of words marked as stuttering was high, as is usually found.—*Journal abstract.*

Physical & Psychosomatic Disorders

12540. Alliez, J. & Audon, S. (Psychiatric Clinic, Hosp de la Timone, Marseilles, France) [Gilles de la Tourette's disease.] (Fren) *Annales Médico-Psychologiques*, 1975(Oct), Vol 2(3), 489-522.—Reviews the history of this rare but well-defined syndrome, which falls midway between neurology and psychiatry. The principal findings from the world's literature to date are summarized on clinical features, neurological examination, psychological test findings, and etiologic factors, and a modal description is provided of the course of the disease. Data pertaining to both psychogenetic and organogenetic hypotheses of origin are reviewed, and a final section on treatment synthesizes a combined pharmacologic and psychotherapeutic approach to case management. 12541. Balkay, Sarolta B. & Engelmayer, Ágnes L. (Gyógypedagógiai Tanárképző Főiskola, Budapest, Hungary) [The application of Raven's Coloured Matrices Test in examining the hearing defective.] (Hung) *Magyar Pszichológiai Szemle*, 1974, Vol 31(2), 202-216.—Tested 100 normal children and 121 with a hearing defect (Grades 1-8, ages 6.6-14 yrs) with Raven's Coloured Progressive Matrices, and 71 hearing-impaired children with the Snijders-Oomen Non-verbal Intelligence Test. For the hearing-impaired group, correlation between the 2 tests was .73 ($p < .001$). Deaf children did not attain the average scores of normal children until

they were several years older than normals. Faults deriving from deficient perception were more frequent with the deaf. The Raven test was particularly sensitive for the examination of abstract thinking ability and for the detection of allogical thinking and perceptual handicap. (Russian & English summaries) (27 ref)—*F. Mester.*

12542. Boller, François et al. (VA Hosp, Neurobehavior Unit, Cleveland, OH) **Optic ataxia: Clinical-radiological correlations with the EMiscan.** *Journal of Neurology, Neurosurgery, & Psychiatry*, 1975(Oct), Vol 38(10), 954-958.—Presents the case history of a 47-yr-old right-handed male who, after coronary by-pass surgery, developed a Gerstmann's syndrome, a visual-spatial perceptual deficit, and a gross impairment of movement under visual guidance (optic ataxia). Visual fields and extraocular movements were intact; he had a left hemiparesis. The EMiscan (computerized axial tomography of the head) showed 3 lesions: a left parietal-occipital lesion, a posterior callosal lesion, and a right frontal lesion. It is hypothesized that optic ataxia in both visual fields requires bilateral lesions which, in the present case, were strategically placed so as to effectively disconnect motor cortex from visual input.

12543. Cavazzuti, Valeria. (U Bologna, Inst di Psicologia, Italy) [Effects of massive and distributed practice after monolateral temporal lobectomy in man.] (Ital) *Archivio di Psicologia Neurologia e Psichiatria*, 1975(Apr-Jun), Vol 36(2), 167-175.—Used B. J. Underwood's technique of paired associate learning by massive or distributed practice with 2 groups of patients after left or right temporal lobectomy. Results indicate that quantitative differences exist between the 2 groups and that a conspicuous deficit in long-term memory is characteristic of left temporal lobectomy. Distributed practice improved learning equally in both groups.—*L. L'Abate.*

12544. Cels, J. P.; Holthaus, C. & Sunier, A. (Sinai Centrum, Amersfoort, Netherlands) [A study of how old people with degenerative dementia handle temporal patterns.] (Fren) *Archives de Psychologie*, 1975(Spr), Vol 43(169), 1-18.—Studied the succession of taps performed by elderly individuals suffering from severe forms of mental deterioration as a result of cerebral arteriosclerosis of dementia senilis; controls were mentally healthy elderly individuals. Results show that controls assimilated the patterns offered to their mental schemes of rhythmic activity, and in a certain sense comprehended them as a structured totality. The blurring of part of the pattern brought about only a momentary disequilibrium, easily precorrected by a mental reconstruction finding its source in distinctive marks, which became integrated by regularity processes. For pathologic Ss, the distinctive marks of the pattern induced neither a corrective nor a precorrective autoregulation. (French & German summaries)—*English summary.*

12545. Charlton, Maurice H. (U Rochester, School of Medicine & Dentistry) **Presenile dementia.** *New York State Journal of Medicine*, 1975(Aug), Vol 75(9), 1493-1495. Describes the clinical picture of presenile dementia as an organic mental syndrome, symptoms of which include (a) defects of recent memory, (b) disorientation, (c) nocturnal confusion, (d) withdrawal from social contact, and (e) defects of speech and calculation.

The causes must be identified from among (a) heredo-degenerative factors; (b) trauma; (c) infection; (d) metabolic factors; (e) intoxication; (f) neoplasms; (g) vascular factors; or (h) normal pressure hydrocephalus. The neurologist must seek the appropriate cause, while primarily looking for remediable causes. Although the latter occur in only a few cases, the cost of exhaustive workups must be balanced by humanitarian considerations and economic savings of chronic institutionalization. For nonremediable causes, the neurologist can help in many ways, from biochemical investigation to social counseling.—P. R. Sweet.

12546. Chiu, Edmond; Mac Kay, Ian R. & Bhathal, P. B. (U Melbourne, Australia) **Hepatic morphology in Huntington's chorea.** *Journal of Neurology, Neurosurgery, & Psychiatry*, 1975(Oct), Vol 38(10), 1000-1002.—Liver biopsy specimens from 6 patients with Huntington's chorea were examined by 4 histopathologists, 3 of whom were unaware of the diagnoses or any clinical details on the patients. The minor and inconsistent abnormalities reported were of a nonspecific character. The suggested interrelation between damage to cerebral neurones and hepatocytes in Huntington's chorea was not substantiated.

12547. Cruickshank, William M. (U Michigan) **Cerebral palsy: A developmental disability.** (3rd rev ed). Syracuse, NY: Syracuse U Press, 1975. xvii, 623 p. \$24.

Presents 17 papers by clinicians, educators, pediatricians, and other specialists on medical and psychological aspects of cerebral palsy; therapeutic measures; education and vocational guidance; and assistance to families.

12548. Davis, Carole J. (Bryn Mawr Coll) **Comparison of House-Tree-Person drawings of deaf and hearing children ages seven through ten years.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5186.

(U Heidelberg, Neurologische Klinik, W Germany) [Dichloroethane poisoning with myoclonic syndrome, seizures and irreversible cerebral defects.] (Germ) *Archiv für Psychiatrie und Nervenkrankheiten*, 1975, Vol 220(4), 373-379.—Describes the case of a 48-yr-old male who inadvertently took a sip of an ointment containing dichloroethane, survived, and showed a 2 phase course of toxic symptoms. After an initial narcosis and an interval with few pathological symptoms, seizures, myoclonia, and somnolence occurred. Irreversible final disturbances were lasting mental defects, cerebellar dysarthria, ataxia, and hydrocephalus. Concomitant diseases were acute liver dystrophy, nephropathy, and anemia. The clinical picture of dichloroethane poisoning is outlined, the pathogenesis of this particular cerebral lesion described, and the therapy discussed (35 ref)—English abstract.

12550. Drewe, E. A. (Inst of Psychiatry, London, England) **An experimental investigation of Luria's theory on the effects of frontal lobe lesions in man.** *Neuropsychologia*, 1975(Oct), Vol 13(4), 421-429.—Tasks on which A. R. Luria (1966) has predicted patients with lesions of the frontal lobes would be impaired were given to 48 patients with unilateral localized lesions. Deficits were found, although the nature of impairments and their relationship to specific locus of lesion were not as predicted. In patients with frontal lobe damage, relative-

ly unimpaired verbal responses were found in association with defective motor responses on only 1 task. The inability to use overt verbalization to regulate motor performance was not as general as Luria has hypothesized. The deficits are discussed in relation to known effects of frontal lesions in man and non-human primates. (French & German summaries) (19 ref)—Journal abstract.

12551. Drunkenmölle, C. (Martin Luther U, Radiologische Klinik, Halle-Wittenberg, E Germany) [Psychological investigations of patients with breast carcinoma: A pilot study.] (Germ) *Psychiatria Clinica*, 1975, Vol 8(3), 127-139.—Studied patients with breast carcinoma to establish guidelines for improvements in patient care and health education. Ss were asked to complete the following: a complaints inventory questionnaire according to Hess, Raven's Progressive Matrices, the MMPI, the 16-PF, and a questionnaire regarding attitudes to the illness. The connections between fear and length of delay were discussed. It appears possible to distinguish neurotic from nonneurotic patients with carcinoma. Working hypotheses were developed which could be tested on a larger number of patients. (47 ref)—English abstract.

12553. Fields, Francis R. & Fields, Barbra. (VA Hosp. East Orange, NJ) **The accuracy of human figure drawings among subjects with predominantly right vs. predominantly left cerebral insult.** *Newsletter for Research in Mental Health & Behavioral Sciences*, 1975(Feb), Vol 17(1), 20-24.—Patients with right cerebral damage did not manifest greater deficiencies in visual construction and spatial integration, as measured by human figure drawings, than patients with left cerebral damage.—S. M. Levin.

12554. Fraiberg, Selma. (Child Development Project, Ann Arbor, MI) **The development of human attachments in infants blind from birth.** *Merrill-Palmer Quarterly*, 1975(Oct), Vol 21(4), 315-334. Normative data on the development of social and motor responses of blind infants was provided by home observations of 5 male and 5 female children 1-24 mo old. The social behaviors studied were (a) tactile discrimination of familiar and unfamiliar faces, (b) smiling to a familiar voice, (c) separation protest, (d) stranger avoidance, and (e) person permanence. Methods for studying these behaviors in blind children are explained, with discussion of their equivalents in sighted children. Norms for 10 gross motor behaviors are presented and compared with the identical behaviors in sighted children. Examples from observational protocols illustrate the methods and criteria employed. (36 ref)—W. R. Street.

12555. Friedman, Ronald. (Ontario Inst for Studies in Education, Toronto, Canada) **Some characteristics of families of children with psychogenic pain.** *Journal of Clinical Child Psychology*, 1975(Fall), Vol 4(3), 21-23.—Describes social psychological characteristics of children referred with diagnoses consistent with functional or psychogenic complaints. Incidence of complaints and

results of therapeutic outcome are included.—W. V. Adams.

12556. Fukushima, Takanori. (Freie U Berlin, Neurochirurgische Klinik, W Germany) Application of EEG-interval-spectrum-analysis (EISA) to the study of photic driving responses: A preliminary report. *Archiv für Psychiatrie und Nervenkrankheiten*, 1975, Vol 220(2), 99-105.—Used the EISA method to analyze photic driving responses in 65 normal Ss, 20 patients with brain tumor, and 4 cases of severe head injury. The response patterns in normals were classified into 5 types. Each response pattern was compared with the resting EEG activities, with no significant relationship found between them. The responses of patients with brain tumor or severe head injury were considerably reduced. The reduction of the photic driving responses in brain tumor cases was not specific to the localization of the tumor. It appeared to represent the diminution of the general cerebral reactivity corresponding to the severity of the brain damage. Results confirm that EISA is a simple and practical method for the frequency analysis of long duration and suitable for routine clinical examination. (German summary)—*Journal abstract*.

12557. Gainotti, Guido. (Catholic U, Clinic for Nervous & Mental Diseases, Rome, Italy) Confabulation of denial in senile dementia: An experimental design. *Psichiatria Clinica*, 1975, Vol 8(3), 99-108.—Some forms of confabulation ("confabulation of denial") seem due to the need to deny demential dissolution by replacing information pointing to illness with expressions suggesting normal health and efficiency. 76 unselected patients affected by senile dementia were investigated in order to study the relationships between confabulation of denial and (a) stage attained by the demential process, (b) degree of memory loss, and (c) personality features and cultural models of the patients. Confabulations of denial were absent in the initial and the most advanced stages of dementia, whereas they frequently occurred in the stages of state and of evolution of illness. Memory loss did not seem to be directly responsible for the symptom, while personality features and social cultural models seemed to have a definite valence in the development of confabulation of denial. (33 ref)—*Journal abstract*.

12558. Giménez Camarasa, J. M. (U Autónoma Barcelona, Spain) [Dermatology and psychosomatic medicine.] (Span) *Revista de Psiquiatria y Psicología Médica*, 1974(Apr-Jun), Vol 11(6), 381-388.—Classifies various dermatoses as (a) of purely emotional origin, (b) influenced by emotional factors, or (c) occasionally perpetuated by emotional factors.—E. T. Czeschlik.

12559. Gocka, E. F.; Conner, L. E.; Freeman, K. & Wilson, D. (VA Hosp, Sepulveda, CA) Alcoholism as a predictive index of elapsed time between grand mal seizures. *Journal of Clinical Psychology*, 1973(Jul), Vol 29(3), 306-312.—Used 6 statistical methods to analyze clinical judgment data that would predict the relationship between the extent of alcoholism and the frequency of grand mal seizures in 55 nonalcoholic and 23 alcoholic epilepsy patients. Four of the methods depended on a cumulative probability distribution calculated by life table methods, one was a strict nonparametric procedure, and one used a maximum likelihood regression estimation procedure. Results were compared with those

of a study by L. E. Connor and E. F. Gocka (1972) which depended on a concurrent and quantitative definition of alcoholism: the present study investigated the predictive value of the initial yes/no clinical judgment of whether alcoholism precipitated the seizure. Results show that all of the methods based on the life table procedure that used the "% rule" to make adjustments for censored observations were nonsignificant. Limitations were also found for the other 2 procedures. It is concluded that, although the data concur with those of the previous study in that a correlation was obtained between initial impression of alcoholic effects and subsequent elapsed time between grand mal seizures, the statistical data are borderline and dependent on the analysis used. (26 ref)—L. Gorsey.

12560. Grundvig, John L.; Ajax, Ernest T. & Needham, Walter E. (VA Hosp, Knoxville, IA) Screening organic brain impairment with the Memory-for-Designs Test: Validation of comparison of different scoring. *Journal of Clinical Psychology*, 1973(Jul), Vol 29(3), 350-354. Administered the Memory-for-Designs Test to 2 groups of non-brain-damaged and 2 groups of brain-damaged patients (50 Ss in each group; mean age of all Ss, 45.8 yrs) in a Veteran's Administration hospital. Comparisons employed a 3-factor ANOVA design: brain-damaged (BD) vs normal (N), .5- vs 5-sec exposure of designs, and 3 scoring systems for all designs. N performance was superior to BD under all conditions. The 5-sec exposure of designs provided greatest N vs BD differences. Scoring system differences, while small, favored the more inclusive modified Taylor system. Only the Impairment-Scoring System interaction was significant. While not significant, there was a clear trend toward greater N group differential performance as a function of exposure time. Significant age correlations with performance were obtained for 10 of 12 score system-exposure time-impairment comparisons. (16 ref)—*Journal summary*.

12561. Ilučev, D. & Kukladžiev, B. (I. P. Pawlow Lehrstuhl für Pathophysiologie, Medizinische Fakultät, Plovdiv, Bulgaria) [Acid-base and electrolyte correlations in blood and fluid in alcoholic delirium.] (Germ) *Archiv für Psychiatrie und Nervenkrankheiten*, 1975, Vol 220(4), 393-403.—Studied the gas and electrolyte homeostatic changes in arterialized capillary blood in 51 patients with acute alcoholic psychosis. In 29 Ss the blood and fluid data were correlated. It was established that acute alcohol delirium was accompanied by alkalosis of metabolic, respiratory, or mixed origin. Irrespective of the approximate uniformity of blood and fluid changes, there was a distinctly expressed imbalance between the different parameters. After psychotic symptoms subsided (7-10 days after admittance), fluid acid-base fluctuations were to some extent still observable. They manifested greater resistance in comparison with blood. (30 ref)—*English abstract*.

12562. Jakumelt-Morgott, Ulrike; Woelk, Helmut & Kanig, Karl. (U Homburg, Nervenlinik, W Germany) On the activity of brain phospholipase A₂ towards specifically labelled glycerophospholipids during subacute sclerosing panencephalitis. *Archiv für Psychiatrie und Nervenkrankheiten*, 1975, Vol 220(2), 131-137.—1,2-Diacyl-sn-glycero-3-phosphorylcholine, -ethanolamine,

and -serine, specifically labeled with different fatty acids at either the 1- or 2-position, were prepared enzymatically using the acyltransferase system of rat liver microsomes. The substrates were subjected to hydrolysis by phospholipase A₂ obtained from brain tissue of a normal 14-yr-old and a 15-yr-old patient with subacute sclerosing panencephalitis (SSPE). In the pathological tissue an increase of 50% in phospholipase A₂ activity was observed in comparison to that from the control brain. Experiments with phosphatidylethanolamines revealed that the phospholipase A₂ activity of the SSPE brain tissue was enhanced by about 50% when compared to the control brain. (33 ref)—*Journal abstract*.

12563. Jasnos, Theodore M. & Hakmiller, Karl L. (Elmcrest Psychiatric Inst, Portland, CT) **Some effects of lesion level, and emotional cues on affective expression in spinal cord patients.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 859-870.—Examined the effect of peripheral change on emotional expression in 24 17-58 yr old males with functionally complete transections of the spinal cord. The higher the level of lesion, the greater was the assumed restriction of afferent return from manipulated peripheral change. Consistent with expectations based on S. Schachter and J. Singer's (see PA, Vol 37:6064) theory of emotion, less intense feelings of arousal were expressed by Ss with higher (cervical) lesions than by Ss with lower (thoracic and lumbar) lesions. Also, expressed arousal to high and low emotion-relevant situations was similar among Ss with cervical lesions but differentiated those with lower lesions. Possible artifactual effects of several individual differences of expressed emotion were examined. None were significantly related to either lesion level of rated arousal. (15 ref)—*Journal abstract*.

12564. Kalićanin, Predrag; Nikoliš, Jovanka & Marković, Vjerica. (Institute for Mental Health, Belgrade, Yugoslavia) **[Inherited D/G translocation.]** (Srce) *Anali Zavoda za Mentalno Zdravlje*, 1973, Vol 5(4), 117-124.—Cytogenetic analysis was performed on 424 patients with Down's syndrome. D/G and G/G translocations were established in 7 and 9 cases respectively. Of these, 3 cases and 1 case respectively were inherited translocations.—*English summary*.

12566. LeVere, T. E. (North Carolina State U) **Neural stability, sparing, and behavioral recovery following brain damage.** *Psychological Review*, 1975(Sep), Vol 82(5), 344-358.—Discusses the possibility that behavioral recovery following brain damage is not dependent on the functional reorganization of neural tissue but is rather the result of the continued normal operation of spared neural mechanisms. In support of this position, data are reviewed which indicate that the nervous system, like other biological systems, is quite stable and incapable of the plasticity required to mediate functional reorganization. Within this frame of neural stability, representative research concerned with recovery of function is reviewed, and it is suggested that the phenomenon of behavioral restitution following brain damage is not only compatible with neural stability and

sparing, it is in direct support of it. Several possible mechanisms capable of mediating behavioral recovery under the aegis of neural stability and sparing are discussed. (17 ref)—*Journal abstract*.

12568. Lison, Michel P. & Speciali, José G. (Ribeirão Preto, Faculdade de Medicina, São Paulo, Brazil) **[Status epilepticus in Lennox-Gastaut syndrome: Electrophysiological aspects.]** (Port) *Arquivos de Neuro-Psiquiatria*, 1974(Dec), Vol 32(4), 284-293.—EEG results from convulsive and nonconvulsive status epilepticus in 11 patients with Lennox-Gastaut syndrome revealed all conceivable forms partly due to the variability of observed clinical modes. Paradoxical findings were found in the lack of epileptic recruiting rhythm or desynchronization during tonic status epilepticus, and in the lack of rapid activity frequently observed during epileptic drop attacks. Atypical findings included the persistence of focal abnormalities or asymmetrical critic discharges. The various forms of chronic absence status and paradoxical benzodiazepine action are related to previous data.—*English summary*.

12569. Mass, M. & De-Nour, A. Kaplan. (Hebrew U, Paul Baerwald School of Social Work, Jerusalem, Israel) **Reactions of families to chronic hemodialysis.** *Psychotherapy & Psychosomatics*, 1975, Vol 26(1), 20-26.—Presents characteristics of 13 families of patients on chronic hemodialysis (with young children at home) who were contacted by a social worker. 7 of them agreed to a family interview, which took place at the patient's home. Although the interviews were unstructured, some topics were brought up by all families, and similar behavior was observed. Most noted was the lack of empathy as well as of hostility between the parents, while a lot of hostility against all human environment was expressed, and children's attempts at expressing empathy were suppressed.—*Journal abstract*.

12571. Moore, Walter H. (Kent State U) **The right cerebral hemisphere: Its role in linguistic processing in aphasia.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 2), 6156.

12572. Nordman, Janine. (Hôpital de jour Aide à l'Épileptique, Créteil, France) **[The psychotherapeutic approach to epileptic patients in a day hospital.]** (Fren) *Annales Médico-Psychologiques*, 1975(Jun), Vol 2(1), 1-30.—Describes the operations of a day hospital for epileptics and discusses the role assumed by the psychotherapist in that institution. Attention is focused on that fraction of the total patient group (30-40%) whose problem is neither readily managed by anticonvulsants nor so extreme and resistant to medical management as to require a highly protective environment, either in their homes or in specialized psychiatric centers. The impact of emotional tensions on seizure thresholds or frequency is well attested, and the way in

which a psychological approach can supplement biological (anticonvulsive) therapy is outlined. Basic to the success of this combination is a recognition of the patient's typically immature level of affective regulation. The lack of associative suppleness and affective volatility, based on the organic substrate, complicates the psychotherapist's task. Much can be achieved in assisting the self-regulation of such patients, while working with individual problems of shame, guilt, and anger. Epilepsy can be summarized as a psychosomatic problem, combining a cerebral immaturity with a maturational deficiency of the personality; in psychoanalytic terms, it is a state of regression to points of fixation.—*H. E. King.*

12573. Oscar-Berman, Marlene; Sahakian, Barbara J. & Wikmark, Gunilla. **Spatial probability learning by alcoholic Korsakoff patients.** *Journal of Experimental Psychology: Human Learning & Memory*, 1976(Mar), Vol 2(2), 215-222.—Compared performance of 10 44-72 yr old male alcoholic Korsakoff patients with a maturational deficiency of the personality; in psychoanalytic terms, it is a state of regression to points of fixation.—*H. E. King.*

12574. Reason, J. T. & Brand, J. J. (U Leicester, England) **Motion sickness.** London, England: Academic Press, 1975. vii, 310 p. \$24.25.—Offers a conceptual framework for the research thus far done on motion sickness. The "sensory rearrangement theory" attempts to identify the commonest characteristics of situations producing motion sickness, to describe the mechanisms underlying the acquisition of adaptation, and to determine why some individuals are consistently more susceptible than others.

12575. Richardson, J. T. (Churchill Hosp, Neuropsychology Unit, Oxford, England) **Differential rates of cerebral maturation between sexes.** *Nature*, 1975(Mar), Vol 254(5496), 140.—Studied the medical records of 33 male and 15 female children referred during a 20-yr period to a department of neurosurgery and diagnosed as suffering from congenital hydrocephalus (CH). The median age was 26 wks for males, 7 wks for females. Females were more likely to require surgical intervention; spontaneous arrest occurred with 52% of the males, 40% of the females. These figures support the hypotheses that CH occurs later but more often in boys than in girls; they are more susceptible than girls but are susceptible later. Research into developmental disorders may increase understanding of the nature of sex differences and the processes of cerebral maturation.—*I. Davis.*

12576. Rosa, Eugene & Mazur, Allan. (Syracuse U) **Validity test of the relation between self-esteem and psychosomatic symptoms.** *Humboldt Journal of Social*

Relations, 1974(Spr-Sum), Vol 1(2), 144-145.—Replicated the Rosenberg's 1965 finding that self-esteem and psychosomatic symptoms are related. Explaining this result as an artifact of an affirmative response bias was ruled out by requiring a control group to express disagreement with an item in order to indicate a symptom.—*P. Babarik.*

12577. Schachter, M. [Severe psychomotor instabilities in child psychiatry: The study of hyperkinetic states.] (Fren) *Annales Medico-Psychologiques*, 1975(Oct), Vol 2(3), 523-539.—Focuses on the problem presented by hyperkinesia in the young child: conditions classified as "psychomotor incontinence." An extensive literature exists on the origin of these states, much of which is of questionable relevance. The essential syndrome is defined (i.e., a true locomotor instability, with ceaseless "storms" of voluntary activity), the history of its recognition is traced, and a summary is given of the most pertinent writings drawn from the world literature. Personal observations on 20 cases are included. The typical motor agitation is almost incessant during waking hours, but is completely absent in sleep. Interpersonal difficulties within the family are nearly universal, either resulting from the patient's difficult-to-manage behavior, or linked to the same CNS disorganization which gives rise to the diffuse motor agitation. Most problems become evident before age 6. Distinct neurological abnormalities do not appear, although "soft-signs" are evident, and the patients are notably difficult to examine. EEG tracings show manifest disorder, reflecting a significant pathological history pre-, para- or postnatally. Clinical evidence indicates that the condition can only be ameliorated by current therapies (in approximately 40% of cases), and full recoveries are not to be expected. (30 ref)—*H. E. King.*

12578. Schenck, E. & Dietz, V. (Albert-Ludwigs-U Freiburg, Psychiatrische und Nervenlinik, W Germany) [Alcoholic polyneuropathy: Electrophysiological and clinical findings in 87 patients.] (Germ) *Archiv für Psychiatrie und Nervenkrankheiten*, 1975, Vol 220(2), 159-170.—Studied maximum motor and sensory nerve conduction velocities, amplitudes of muscle action potentials and sensory nerve action potentials, and needle EMGs in 80 patients with alcoholic neuropathy and in 5 chronic alcoholics without clinical signs of neuropathy. The electrophysiological results were compared to the clinical findings. Neurographic criteria compatible with the diagnosis "alcoholic neuropathy" were defined. Neurographic findings contrary to a diagnosis of alcoholic etiology were demonstrated in 3 patients. Only in a smaller group of patients could a reduction of conduction velocity be found, especially in regions of peripheral nerve entrapment. A decrease in conduction velocity outside of the entrapment sites can be explained in some cases by segmental demyelination in chronic hepatitis or cirrhosis of the liver. (20 ref) —*English summary.*

12579. Seffinger, Daniel J. (California School of Professional Psychology, Los Angeles) **Deviance: A study in the perpetuation of stigmatization using persons with a hearing impairment.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5209.

12580. **Selters, Weldon A.** (U Southern California) **Masked thresholds in normal and impaired ears.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5242.

12581. **Sherwin, Duane & Mead, Beverley.** (Creighton U, Medical School) **Delirium tremens in a nine-year-old child.** *American Journal of Psychiatry*, 1975(Nov), Vol 132(11), 1210-1212.—Reports a case of an American Indian boy who was found to have been drinking steadily for 3 yrs prior to his emergency admission. It is suggested that the use of alcohol by children is an activity that may be more common than most physicians realize.

12582. **Solonevich, Ruth & Cobb, Edward S.** **Relationship between pulse pressure, arteriosclerosis, and a visual reversal phenomenon.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 939-949.—42 hospital patients and 63 hospital staff controls were studied on a task producing a perceived reversal in the direction of rotating objects. Ss were required to indicate when reversal in the direction of rotation of the percept occurred for the 1st time. Low initial reversal time coincided with high pulse pressure, which is an indicator of arteriosclerotic processes. The relationship of initial reversal time and pulse pressure existed for all Ss with histories of cerebro-vascular accident, amputees secondary to diabetes mellitus, and many control Ss who had a poor health history regarding high blood pressure and/or diabetes mellitus. In contrast, control Ss with no cardiovascular or diabetic problems had high initial reversal times or no reversal at all. Initial reversal time was stable over a short as well as longer periods of time. It is concluded that initial reversal time may be useful as an adjunct in the prognosis of arteriosclerotic pathology. —*Journal abstract.*

12583. **Speciali, José G. & Lison, Michel P.** (Ribeirao Preto, Faculdade de Medicina, Sao Paulo, Brazil) **[Status epilepticus in Lennox-Gastaut syndrome: Clinical aspects.]** (Port) *Arquivos de Neuro Psiquiatria*, 1974(Dec), Vol 32(4), 275-283.—Observed convulsive and nonconvulsive status epilepticus in 14 of 27 patients with Lennox-Gastaut syndrome, who were clinically examined for qualities and sequences of phenomena conforming to the terminology of the Clinical and Electroencephalographical Classification of Epileptic Seizures. The incidence and prognostic significance of the phenomena suggested classification according to the complex forms of status epilepticus. (36 ref) *English summary.*

The S lost sight 12-14 mo after her birth (due to leukoma of the cornea) and received the operation for

opacity of the cornea (corneal transplantation) at the age of 11 yrs. Results are presented of a 10-yr followup of the S's postoperative 2- and 3-dimensional form perception based on the newly gained sight and their tactual form perception. (33 ref)—*Journal abstract.*

12586. **Voigt, K.; Kendel, K.; Bidingen, H. J. & Freund, H.-J.** (Albert-Ludwigs-U Freiburg, Neurologische Klinik mit Abteilung für Neurophysiologie, W Germany) **[Two-dimensional ultrasonic diagnosis of brain tumors and subdural hematomas by electronic sector scanning.]** (Germ) *Archiv für Psychiatrie und Nervenkrankheiten*, 1975, Vol 220(4), 307-323.—Electronic sector scanning (ESS) is a new technique which provides continuous and instantaneous cross-sections of intracranial structures through the intact skull, including the ventricles and large cerebral arteries, by means of a stationary probe. The efficiency of ESS in the diagnosis of brain tumors and extracerebral hematomas in 295 neuroradiologically controlled cases is described. Supratentorial brain tumors could be detected directly with ESS by abnormal reflections of the tumors and indirectly by displacement of intracranial reference structures, mainly the ventricular borders. In 239 cases of suspected brain tumor, 126 were neuroradiologically confirmed as supratentorial brain tumors. Among these 126, correct localization was determined by ESS in 86.5%. The highest reliability of ESS proved to be the direct demonstration of frontal tumors (93%). Subdural hematomas (56 patients) could be lateralized correctly in 93%. However, direct demonstration of the border of the hematomas could be achieved only in 48.2%. Chronic subdural hematomas in children were easier to recognize, and the border could be demonstrated in 18 out of 19 cases. The clinical applicability and diagnostic value of ESS as a nontraumatic investigation procedure are discussed in comparison to cerebral angiography, pneumoencephalography, brain scintigraphy, and CAT scan. 12587. **Walden, Brain E. & Montgomery, Allen A.** (Walter Reed Army Medical Ctr, Audiology & Speech Ctr, Washington, DC) **Dimensions of consonant perception in normal and hearing-impaired listeners.** *Journal of Speech & Hearing Research*, 1975(Sep), Vol 18(3), 444-455.—Obtained judgments of consonant similarity from 18 adults who had normal hearing, high frequency sensorineural hearing loss, or relatively flat sensorineural hearing loss. The individual differences model through computer program INDSCAL was used to derive a set of perceptual features empirically from the similarity judgments and to group Ss on the basis of strength of feature usage. Analysis revealed that sonorance was the dominant dimension in the similarity judgments of Ss with high frequency hearing losses, while sibilance tended to dominate the judgments of Ss with flat audiometric configurations. Normal hearing Ss tended to weight these 2 dimensions approximately equally. These differences in similarity judgments were observed based upon audiometric configuration, despite the fact that the 2 hearing-impaired groups were not unique in word-recognition ability. 12591. Adams, David B. (U Alabama) **The function of psychological data in the induction of perceptual set.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5179-5180.

12592. Cervantes Gimeno, F. (U Barcelona, Medical Faculty, Spain) **The structuralist approach in psychiatry.** *Human Context*, 1973(Spring), Vol 5(1), 114-137.—Presents structuralist concepts in linguistics and discusses the relationships between language on the one hand and personality, mental illness, psychotherapy, and the Freudian unconscious on the other. These relationships are described as structures analogous to those postulated in linguistic theory.

12593. Cole Jonathan O. (McLean Hosp, Belmont, MA) **What's in a word? or Guilt by definition.** *Massachusetts Journal of Mental Health*, 1975(Win), Vol 5(2), 4-13.

Discusses unfavorable reports in the press regarding behavior modification and psychotropic drugs. Personal observation of behavior modification indicates that society, especially parents, educational systems, therapeutic communities, and prisons all use behavioral modification. The issue is whether or not the treatment works and is acceptable to the patient, which raises the issue of informed consent. With appropriate consent of the S and appropriate review of the components, behavior modification programs can be sensible, reasonable, and effective. Psychotropic drugs must all be reviewed in relation to symptomatology and pharmaceutical action of the drug. Both behavior modification and psychotropic drug use should be evaluated on the basis of efficacy, not reputation.—P. R. Sweet.

12594. Fisher, Joseph V.; Mason, Robert L. & Fisher, Joseph C. (Medical U of South Carolina) **Emotional illness and the family physician: II. Management and treatment.** *Psychosomatics*, 1975, Vol 16(3), 107-111.—Presents detailed information on the referral and prescribing practices of physicians. Recent advances in psychiatry have not altered the treatment of mental illness by practicing physicians. However, the use of sedatives has declined, and younger doctors appear to be more self-reliant. Identification and diagnosis of emotional disease has been improved and psychiatric principles are more often applied.—A. S. Kulkarni.

12595. Henderson, Peter B.; Magnussen, Max G.; Snyderman, Barbara B. & Homann, Juergen. (U Pittsburgh, Medical School) **A clinical decision-making model for child psychiatric intervention selection.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 923-934.—Describes a 4-component procedure of clinical decision making, developed by a group of senior child clinicians in an urban child mental health center. The major goal of the paper is to impart a basic understanding of the theory underlying the formulation of the disposition-oriented clinical decision making system, that can be eventually translated into questionnaire format and made useful and usable in general clinical application. The procedure is described in stepwise fashion and then linked to clinical dispositional options to be chosen from the clinical services available in a clinic. A child mental health data system will ultimately be developed. (19 ref)—*Journal abstract.*

12596. Houillon, P. [Psychosocial factors in the appearance and waning of an atypical depressive state.] (Fren) *Annales Médico-Psychologiques*, 1975(Jun), Vol 2(1), 189-197.—Asserts that overdevotion to theoretical concepts about the origin of behavior disorder, whether organogenetic or psychogenetic, can impair the balanced clinical management of a patient, which should remain the psychiatrist's primary concern as a physician. A concrete illustration is provided by the case of an atypical depressive state in an adolescent girl, first diagnosed as schizophrenia. Resistant to standard psychopharmacologic treatment and worsened by it, a spectacular restitution later was achieved by a therapy which combined minor anxiolytic medication with a social approach. Peer and family pressures had acted on this individual in such a way as to produce a decompensation differing little from those produced by the more dramatic dislocations of war, famine, or economically forced cultural displacement.—H. E. King.

New York, NY: Columbia U Press, 1975. ix, 375 p. \$15.—Presents multidisciplinary papers dealing with general concepts regarding bereavement and with specific aspects such as physical manifestations, the bereaved family, bereaved children, older persons, and survivors of suicide cases. A group of papers deals with the professional roles of nurses, student nurses, and social workers in thanatology.

12603. Thompson, Larry W.; Davis, Glenn C.; Obrist, Walter D. & Heyman, Albert. (U Southern California, Andrus Gerontology Ctr) Effects of hyperbaric oxygen on behavioral and physiological measures in elderly demented patients. *Journal of Gerontology*, 1976(Jan), Vol 31(1), 23-28.—Tested the effects of repeated exposures to hyperbaric oxygen (HBO) on psychological, EEG, and cerebral blood flow measures in 8 patients with cerebrovascular disease and 13 with cortical atrophy. Ss were 50-80 yrs old. They were exposed to 100% oxygen at 2.5 atmospheres absolute twice daily for 90 min for 15 days. No significant changes were observed in any of the measures. Level of initial functioning was not associated with change due to treatment. Results suggest that HBO has no therapeutic effect in patients with moderate to severe dementia. (17 ref)—*Journal abstract*.

12604. Vender, Simone & Caverzani, Edgardo. (U degli Studi, Padova, Italy) [The relevancy of computerized

socio-psychiatric data: Methodological considerations and the presentation of a biannual estimation of recoveries.] (Ital) *Rivista di Psichiatria*, 1975(May-Jun), Vol 10(3), 268-285.—The results of codifying sociological and psychiatric symptoms by means of Item Cards at the Psychiatric Institute of the University of Pavia, Italy, during the Institute's 2 yrs of existence are related to research and Group—*N. De Palma*.

12605. Wallace, Edwin R. & Rothstein, William. (William S. Hall Psychiatric Inst, Columbia, SC) Symptom substitution in a male hysteric. *American Journal of Psychoanalysis*, 1975(Win), Vol 35(4), 355-357.—Describes symptom substitution involving illusion and paralysis in the case of a 35-yr-old male hysteric treated with hypnosis and insight-oriented psychotherapy.—*J. Adams-Webber*.

12606. Zapotoczky, H. G. [Organic basis of so-called psychogenetic illness.] (Fren) *Annales Médico-Psychologiques*, 1975(Jun), Vol 2(1), 176-181.—Describes the changes in symptoms reported by 50 ambulatory patients undergoing a combined psychiatric treatment program, psychopharmacologic therapy (neuroleptic and thymoleptic), and behavior therapy (desensitization, operant conditioning, and "flooding"), before and after a marked improvement in clinical condition. Self-reported symptoms tended to show that the problems most often experienced by those with secondary education related to difficulties in thinking and in concentration, while anergias and neurovegetative disorders were more evident among patients with primary schooling only. The characteristic types of symptoms, and changes produced in them by an effective psychiatric therapy, are interpreted as lending support to Berner's hypothesis that problems often called "neurotic" rest instead on a disturbed biological substrate, called the "axial syndrome." The altered biological state results in modified learning capacities (in the sense of state-dependent learning), which can have as a consequence the accentuation and fixation of behaviors termed "neurotic."—*H. E. King*.

Psychotherapy & Psychotherapeutic Counseling

12607. Ack, Marvin; Beale, Estela & Ware, Lucile. (Children's Health Ctr & Hosp, Minneapolis, MN) Parent guidance: Psychotherapy of the young child via the parent. *Bulletin of the Menninger Clinic*, 1975(Sep), Vol 39(5), 436-447.—Attempts a systematic presentation of the philosophy and methodology of psychotherapy with the young child via the parent. The therapist, skilled in analytically oriented psychotherapy and in child development, forms an alliance with the parent to help the child. The major therapeutic tool is to make the parent (a) aware of the unconscious factors contributing to the child's problem behavior and (b) able to use the new awareness in interpreting these difficulties.—*J. Z. Elias*.

12608. Anderson, John E. (California School of Professional Psychology, Los Angeles) Cultural democracy in psychotherapy: Mexican American client, Anglo American therapist. *Journal of the American Academy of Psychotherapy*, 1974(Apr), Vol 34(10-B), 5180.

12609. Andrews, Miriam. Poetry programs in mental hospitals. *Perspectives in Psychiatric Care*.

1975(Jan-Mar), Vol 8(1), 17-18.—Proposes the use of poetry in mental hospitals, as music, dance, painting, and crafts are already used. The specific benefits of reading, writing, and discussing poetry are mentioned, and some necessary attitudes and methods of the poetry therapist are indicated.—*M. L. Hogan.*

12610. **Badura, H. O.** (Rheinisch-Westfälische Technische Hochschule Aachen, Abteilung Psychiatrie, W Germany) [Assessment of affliction pressure and conscious motivation for psychotherapy resulting from the initial interview.] (Germ) *Psychotherapie und Medizinische Psychologie*, 1975(Nov), Vol 25(6), 198-202.—After the initial interview, 20 neurotics were asked to make a self-assessment by means of items. The interviewing psychiatrist classified these items. In the area of "conscious motivation for psychotherapy," a significant correlation was established between auto- and heteroassessment, while judgments differed concerning "affliction pressure." It appears that the discrepancy between these 2 dimensions of judgment is derived from the interactional structure of the different initial interviews.—*S. D. Babcock.*

12611. **Bane, J. Donald; Kutscher, Austin H.; Neale, Robert E. & Reeves, Robert B.** (Eds). *Death and ministry: Pastoral care of the dying and the bereaved.* New York, NY: Seabury Press, 1975. ix, 278 p. \$10.95.—Presents contributions from members of various professions concerned with death and bereavement. Medical, philosophical, and religious aspects of thanatology are considered.

12612. **Benoit, J.-C.** (Hôpital Psychiatrique, Villejuif, France) [Objective research in psychotherapy: Recent data from the English-language literature.] (Fren) *Annales Médico-Psychologiques*, 1975(Jul), Vol 2(2), 267-312.—Reviews progress made during the past 10 yrs on empirical research in psychotherapy, much of which was accomplished by American or English workers and is reported in that language. Approximately 100 studies are summarized, grouped under (a) general trends, (b) theoretical positions (psychoanalytic, behavior therapy, etc), (c) main factors in the therapeutic situation, and (d) special therapeutic fields or methods (brief or group psychotherapy). The continuing extension of the field of psychological care provides legitimacy for an eclectic position. Myths of patient or therapist uniformity are effectively dispelled by the modern comparative investigational approach to patient variables, therapist variables, treatment outcome, patient or therapist selection, and so on. (91 ref)—*H. E. King.*

12613. **Bergantino, Len.** *Human relationships are destined to failure.* *Psychotherapy: Theory, Research & Practice*, 1975(Spr), Vol 12(1), 42-43.—Proposes that the therapist should shatter the client's expectation of a perfect, all-caring, and accepting relationship from himself and others, in order to make possible realistic interpersonal intimacy.—*C. McCreary.*

12614. **Bhatia, R. P.** *A case of manifest homosexuality with acute paranoid trends accompanied by depression and suicidal tendencies.* *Samiksa*, 1974. Vol 28(3), 94-125.—Presents a case study of a 27-yr-old man with manifest homosexuality with acute paranoid trends accompanied by depression and suicidal tendencies with its psychoanalytical psychotherapy treatment.

The psychoanalytic process and the doctor-patient relationship are discussed in relation to inherent problems of guilt.

12615. **Feigelson, Charles I.** (New York Psychoanalytic Inst & Society, NY) *Play in child analysis.* *Psychoanalytic Study of the Child*, 1974, Vol 29, 21-26.—Examines the emphasis placed by B. Bornstein on the central role of play in the psychoanalysis of children and as a more general natural vehicle for knowledge about a child. Differences between the use of play in analysis and in play therapy are noted. Case examples from Bornstein and from the author are provided.

12616. **Friedman, Maurice.** (San Diego State U) *Healing through meeting: A dialogical approach to psychotherapy: II.* *American Journal of Psychoanalysis*, 1975(Win), Vol 35(4), 343-354.—Discusses the concept of healing through meeting in relation to individual and family therapy. The distinction between an objective understanding of something and a transjective understanding of someone is emphasized. It is concluded, on the basis of a review of the literature, that the relationship between doctor and patient is an important part of the healing process. This relationship is described as involving dialogue, mutuality, trust and comradeship.—*J. Adams-Webber.*

12617. **Goepfert, S.** (Albert-Ludwigs-U Freiburg, Medizinischen Fakultät, W Germany) [The psychoanalytic doctor-patient relationship as a tool for adaptation or emancipation of the individual.] (Germ) *Psychotherapie und Medizinische Psychologie*, 1975(Nov), Vol 25(6), 175-187.—Whether the psychoanalytic doctor-patient relationship serves to adapt or emancipate the individual is linked to a description of the psychoanalytic situation and a sketch of the ideal development of the psychoanalytic process. This is clarified by discussion of the psychoanalytic concept of disease and an outline of the preconditions of contact between analyst and patient. It is asserted that the relationship between doctor and patient as an instrument for adaptation or emancipation cannot be established in advance but has to be reviewed frequently from the therapeutic object relationship established.—*S. D. Babcock.*

12618. **Grant, Thomas M.** (California School of Professional Psychology, Los Angeles) *Matching of therapist and client: A consideration for outcome in psychotherapy.* *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5191.

It was further found that many counselors resisted confronting such students with their academic inadequacies.

12629. **Langen, D.** (Johannes Gutenberg-U Mainz, Klinik und Poliklinik für Psychotherapie, W Germany) **[Spontaneous recovery or successful therapy: A diagnostic and catamnestic problem.]** (Germ) *Archiv für Psychiatrie und Nervenkrankheiten*, 1975, Vol 220(4), 289-293.—Examines the problematic assertion, made very emphatically and predominantly by laymen, that analytic psychotherapy does not help the patient. Consideration is given to the control group, the diagnosis, the percentage of follow-up examinations in relation to original case material, additional therapeutic components effective during psychotherapy, and various factors promoting spontaneous recovery. (15 ref)—*English abstract.*

12630. **Lasky, Robert G.** (Syracuse U) **The effects of client-counselor age congruency and counselor status on interpersonal attraction in the dyadic rehabilitation**

counseling interview. *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 6979-6980.

12631. **Lopez, Thomas.** (Ctr for Preventive Psychiatry, White Plains, NY) **Psychotherapeutic assistance to a blind boy with limited intelligence.** *Psychoanalytic Study of the Child*, 1974, Vol 29, 277-300.—Presents the case study of psychoanalytically-based psychotherapy with a preschool age blind male of generally delayed intellectual functioning. Five terms of treatment are described. The case is discussed in terms of a massive developmental arrest. (18 ref)

12632. **McClanahan, Lowell D.** (Ohio U) **A comparison of professed counselor techniques and attitudes with client evaluations of the counseling relationship.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5637.

12633. **Moore, William T.** (U Pennsylvania) **Promiscuity in a 13-year-old girl.** *Psychoanalytic Study of the Child*, 1974, Vol 29, 301-318.—Describes the psychoanalytic treatment of a 13-yr-old female with a 1-1/2 yr history of sexual promiscuity. A follow-up report obtained 4 yrs after the termination of analysis is also included.

12634. **Moser, Adolph J.** (Indiana Youth Ctr, Plainfield) **Implications of the theory of attribution for psychotherapy.** *Corrective & Social Psychiatry & Journal of Behavior Technology Methods & Therapy*, 1975, Vol 21(3), 10-12.—Describes the social-psychological concepts of attributions and relates them to the treatment disciplines. Two questions are discussed: (a) What is the usefulness of attribution theory? and (b) How are therapists able to make attributions? Various studies are mentioned to illustrate what causes the therapist to make inaccurate attributions. Suggestions are presented to enable him to increase the accuracy of his perceptions and hence to make correct attributions (e.g., be aware of assumptions that lead to inaccurate attributions, get to know yourself, etc). Patients also make inaccurate attributions about themselves and need opportunities of increasing the accuracy of their self-perceptions and perceptions of others. The therapist can often serve as a source of information, particularly with regard to concerns about deviance. The therapist can give the concerned individual an opportunity to check out these concerns, either in an individual treatment session or a group session.—*J. Sorokac.*

12635. **Moustakas, Clark.** (Merrill-Palmer Inst, Detroit, MI) **Who will listen? Children & parents in therapy.** New York, NY: Ballantine, 1975. xii, 147 p. \$1.75.—Describes many case histories which illustrate the vital need of children to be listened to with honesty and sensitivity, and the calamitous results in adult life when such communication is not established between parents and children.

12636. **Muti, Matteo R.** (California School of Professional Psychology, Los Angeles) **The effects of initial favorable information on perception of a therapist's negative evaluation.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5202.

12637. **Novick, Kerry K.** **Issues in the analysis of a preschool age girl.** *Psychoanalytic Study of the Child*, 1974, Vol 29, 319-340.—Provides an account of the 1st yr of psychoanalysis of a 4-yr-old female who refused to attend nursery school and who was unable to tolerate

separations from her mother. She presented a complicated mixture of age-adequate functioning and severe symptoms that interfered with her progress. Changes after 1 yr are examined.

12638. Oelschlaeger, Mary L. (Southern Illinois U) **The effect of response-contingent positive stimulation on the part-word repetitions of four stutterers.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4738.

12639. Overbeck, G. & Brähler, E. (Justus Liebig-U Giessen, Psychosomatische Klinik, W Germany) **[The Therapeutic Session Report (TSR) as an instrument of psychotherapy control.]** (Germ) *Psychotherapie und Medizinische Psychologie*, 1975(Nov), Vol 25(6), 189-197. —Used K. I. Howard and J. A. Delensky's TSR to gain insight into the structure of 2 individual analytically oriented psychotherapies. One case concerns treatment of a psychosomatic patient and the other a psychoneurotic patient. After each session, patient and therapist assessed problems and results of the hour, formulated the expectations for therapy, and judged the partner's behavior and personal feelings. The significantly different assessments between the 2 therapies are discussed. Obvious differences reflect the ego-structural characteristics and peculiarities of the object relationship which are characteristic of patients with psychosomatic disturbances.—S. D. Babcock.

12640. Paluszny, Maria & McNabb, Marie. (U Michigan Medical School) **Therapy of a 6-year-old who committed fratricide.** *Journal of the American Academy of Child Psychiatry*, 1975(Spr), Vol 14(2), 319-336.—Describes the case history and therapy of a 6-yr-old girl who killed her 4-yr-old brother. One focus of the therapy was to enable the patient to recall the murderous act.—R. M. Cohen.

12641. Pérez, Augusto. (U Nacional, Bogotá, Colombia) **[The evaluation of psychotherapies.]** (Span) *Revista Latinoamericana de Psicología*, 1975, Vol 7(3), 357-380. —Discusses the problem of judging the effects of various psychotherapies, which for this purpose should be viewed as technologies and not as science. The psychotherapies and science have different goals, and the assumptions of science cannot be satisfied in psychotherapeutic situations. It is concluded that the experimental approach is not the best way to evaluate the psychotherapies. However, the experimental study of individual cases can be useful. (45 ref)—English summary.

12642. Reiner, Charles A. (U Florida) **Multiple and individual therapy: A comparative study of client outcome, attitudes, and discussion in two treatment modalities.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5206-5207.

12643. Repko, Glenn R. (California School of Professional Psychology, Los Angeles) **A study of the initial dream in therapy using two methods of dream collection.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5207.

12645. Rizzola, Nobarino F. (U Genova, Istituto de Psichiatria, Italy) **[The humanist approach to psychotherapy for difficulty in self-affirmation: Study of two cases of visual obsession.]** (Ital) *Medicina Psicosomatica*, 1974(Jul-Sep), Vol 19(3), 275-288.—Humanistic psychotherapy emphasizes the importance of clarity and spontaneity in interpersonal contact and of the patient's experiences and prospects in the situation. The approach is illustrated by the cases of 2 young men with a visual obsession. (English & French summaries) (33 ref)—F. Mester.

12646. Robinson, Warren H. (U Waterloo, Canada) **The differential effects of relational immediacy and intrapersonal immediacy workshops on field dependent and field independent participants.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5174.

12647. Rowland, S. James. (New York Medical Coll, Grasslands Hosp, Valhalla) **Ego-directive psychotherapy in limited treatment.** *Social Casework*, 1975(Nov), Vol 56(9), 543-553.—Suggests that ego-directive therapy works primarily to clarify issues on the level of ego and reality and aims at progress in ego development and at client growth in coping and adaptation. The evidence suggests that persons of lower socioeconomic status often expect and resent short-term treatment. However, illustrations abound to indicate that therapy of limited duration has a fairly wide utility, and hence its concepts should be developed and applied across all socioeconomic groups. A case history illustrates short-term therapy and how it differs from a traditional model.—M. W. Linn.

12648. Saccuzzo, Dennis P. (San Diego State U) **Naturalistic analysis of verbal behavior in psychotherapy.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 911-919.—A parallel-response questionnaire, the Therapy Session Report, was administered to the 57 patients and 19 therapists of a university psychological clinic immediately following each intake session. The purpose of the study was to provide normative data on the content of dialog in psychotherapy and to extend the generalizability of previous results. Data analysis focused on the frequency, structure, and patient-therapist agreement of the topics discussed. Items most frequently endorsed by both patients and therapists were "Relations with the opposite sex," "Mother," and "Hopes or fears about the future." Factor analysis resulted in 7 factors for therapists and 7 for patients, 5 of which were highly similar. Results are interpreted as underscoring the necessity of specificity in process research. A proposal for conducting process research is presented. (26 ref)—Journal abstract.

12649. Schafer, Roy. **A new language for psychoanalysis.** New Haven, CT: Yale U Press, 1976. xii, 394 p. \$20.—Critiques the original terminology of psychoanalysis as based on the concepts of mechanistic science prevalent in Freud's time, and offers a new "action language," said to be better suited to metapsychology and the psychoanalytic vision of reality, which is based on the concept of the person as creator of his own situations, experiences, and activities.

12650. Seay, Thomas A. (Southern Illinois U) **Relationship of counselor verbal and nonverbal behaviors to conditions of the counseling relationship and counselor**

effectiveness. *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5644.

12651. Smith, J. Otis. (Temple U) **The effect of a physical barrier and three levels of counselor greeting responses on the interpersonal trust of Black male college students from low income families during their initial interview.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5645.

12652. Stone, Walter N. et al. (U Cincinnati, Medical Coll) **Impact of psychosocial factors on the conduct of combined drug and psychotherapy research.** *British Journal of Psychiatry*, 1975(Nov), Vol 127, 432-439. —The effect of attitudes of therapists, patients, and researchers on the conduct and outcome of combined drug and psychotherapy research was examined in a brief crisis-oriented psychotherapy clinic. 77 consecutive patients were given 1 of 2 anti-anxiety drugs ("minor tranquilizers") or a placebo in conjunction with the typical psychoanalytically-oriented treatment used in the clinic. The therapists' attitudes favoring psychotherapy over drug therapy (and psychotherapy research) were clearly conveyed to the patients. Indicative of this are the following: (a) 82% of Ss dropped out of drug-taking, although a similar percentage remained in treatment; (b) only 1/3 of the Ss perceived it as being important to their therapists that they should take medication; (c) 87% were rated as improved; and (d) 75% of Ss completing forms considered that most or all of their improvement was attributable to talking. It is pointed out that while E's diligently collected outcome data, they did not enforce drug-related portions of the protocol. Overall, patients remained in therapy, improved and participated in completing forms, so that only the research goals of combined therapy were thwarted, while traditional clinic service and training goals proceeded as usual.—*Journal abstract*.

12653. Wenger, Homer D. (U Missouri, Columbia) **The effects of client dependency, counselor nurturance, and sex of counselor and client on counselor-offered facilitative conditions: An analogue study.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 6991.

12654. Zappella, Michele. (Hosp Regionale St Maria della Scala, Servizio di Neuropsichiatria Infantile, Siena, Italy) **[The ethological theory of infantile autism.]** (Ital) *Archivio di Psicologia Neurologia e Psichiatria*, 1975(Apr Jun), Vol 36(2), 119-143. Describes how N. Tinbergen's theory of the ethological origin of childhood autism is supported by data from its application to these children in their homes and schools. Treatment consists of a progressive enlargement of the relational space of the child. The therapist's background and imagination in creating stimulating new situations is fundamental to this process.—*L. L'Abate*.

Group & Family Therapy

12655. Avesar, Abraham. (U Massachusetts) **Towards a more humanistic approach to family therapy.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5181.

12656. Bojanin, Svetomir. (Institute for Mental Health, Belgrade, Yugoslavia) **[A mental-hygiene ap-**

proach to adolescence.] (Ser) *Anali Zavoda za Mentalno Zdravlje*, 1973, Vol 5(4), 105-116.

12657. Brown, Tallon H. (Southern Illinois U) **Change of self-concept with an intact group by a transactional analysis approach.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5705-5706.

12658. Cahn, Raymond; Weill, Denise & Dion, Yvonne. (Hôpital de jour du C.E.R.E.P., Paris, France) **[Understanding the parents of psychotic children by means of the countertransference process.]** (Fren) *Psychiatrie de l'Enfant*, 1974, Vol 17(2), 413-478. Discusses the role of the family, especially the mother, in the genesis and development of childhood psychosis, pointing out that the evaluations of the role have been contradictory because of the different methods and ideologies and even the personal problems of those who have written on this topic. The countertransference of the observer can be either a source of distortion or a valuable instrument for understanding the problem. 27 cases, followed for 6 yrs after countertransference, confirm the importance of the family environment, but it is the mother who is chiefly responsible for the start of the pathological process. A more accurate differentiation of the factors involved is attempted, using the approach of D. W. Winnicott, and the possibilities and limitations of therapy with the family are specified. (36 ref)—*D. F. Herran*.

12659. Freeman, Arthur M. & Applegate, William R. (Stanford U, Medical School) **Psychiatric consultation to a rehabilitation program for amputees.** *Hospital & Community Psychiatry*, 1976(Jan), Vol 27(1), 40-42. —Staff on the rehabilitation unit for amputees at a US Navy regional medical center requested psychiatric consultation after a group of patients had shown destructive behavior and resistance to the rehabilitation program. An approach was adopted in which a psychiatrist functions as a training consultant in group therapy to the orthopedic staff. The primary therapists are 2 orthopedic nurses, who conduct 2 weekly therapy sessions for the amputees under the consultant's supervision. The sessions have given amputees a chance to ventilate their feelings of alienation, powerlessness, and boredom, and have been effective in halting destructive behavior and increasing self-esteem.—*Journal abstract*.

12660. Gershtman, Harry. (Karen Horney Psychoanalytic Inst & Ctr, New York, NY) **The effect of group therapy on compulsive homosexuality in men and women.** *American Journal of Psychoanalysis*, 1975(Win), Vol 35(4), 303-312. —Discusses the effectiveness of group therapy in treating homosexual problems. The main objective of this approach is not to convert the patient to heterosexuality, but rather to promote personal growth and self-acceptance through confrontation, clarification, interpretation, and working through his own feelings. It is hypothesized that compulsive homosexual behavior stems from a failure to establish a core gender identity because of distorted interpersonal relationships in early childhood. It is suggested that treatment should focus on both the evolution of the illness and current interpersonal and intrapsychic conflicts. (17 ref) —*Adam Weisber*.

12661. Glick, Ira D. & Kesler, David R. (U California, Medical School, San Francisco) **Marital and family**

therapy. New York, NY: Grune & Stratton, 1974. xxii, 181 p. \$14.00.

12662. **Goldenberg, Irene & Goldenberg, Herbert.** (U California, Neuropsychiatric Inst, Los Angeles) **A family approach to psychological services.** *American Journal of Psychoanalysis*, 1975(Win), Vol 35(4), 317-328.—Discusses the usefulness of family therapy in helping whole families, as functioning systems, to interact in more constructive and mutually facilitating ways and to avoid destructive and pathological modes of communication. In this approach, the individual with psychological symptoms is viewed as merely the "identified patient"; in fact, it is the entire family which is the unit requiring psychological services. Various theories of family pathology and some early models of family therapy practice are reviewed. Several current techniques of family therapy are described, including family behavior therapy, multiple-impact therapy, home visits, family crisis intervention, network therapy, and multiple-family group therapy. It is emphasized that family therapy is not simply treating individuals in a family context, but rather changing the disordered family process. (26 ref)—*J. Adams-Webber*.

12676. **Rose, Sheldon D.** (U Wisconsin, School of Social Work, Madison) **In pursuit of social competence.** *Social Work*, 1975(Jan), Vol 20(1), 33-39.—Students at a school of social work conducted assertiveness training for 5 groups of socially anxious persons from diverse backgrounds. A total of 24 members ranging in age from 16-45 yrs included students, housewives, secretaries, an unemployed white-collar worker, a teacher, a day care supervisor, and a school principal. Treatment methods included modeling, coaching, behavior and covert rehearsal, and contingency contracts; members met

weekly for 1½–2 hrs for 8–10 wks. The major source of data was self-reported descriptions of behavior occurring outside the group. Each member had one or more behaviors that he continually monitored until satisfactory levels were achieved or failure was ascertained. Results show that, of the behaviors targeted for improvement by members, 39 were successfully treated, and 2 were not. Average number of behaviors successfully treated per person was 1.6. It is concluded that this is an effective type of program.—*P. O'Brien.*

12683. Canter, Arthur; Kondo, Charles Y. & Knott, John R. (U Iowa, Medical Coll) **A comparison of EMG feedback and progressive muscle relaxation training in anxiety neurosis.** *British Journal of Psychiatry*, 1975(Nov), Vol 127, 470–477. 48 adult psychiatric patients in 2 equal groups with the diagnosis of anxiety neurosis were compared in their response to different methods of training in deep muscle relaxation. One group received EMG feedback and the other a modification of E. Jacobson's (1938) progressive relaxation method. The frontalis muscle was chosen as the target for feedback training and greater the measurement of tension reduction in both groups, since this muscle has been shown to reflect the general muscle tension level in anxious patients. Overall changes in the status of the anxiety symptoms, as determined by global ratings from patients and from primary therapists, were compared in the 2 groups at the end of training. Results indicate that both EMG feedback and the progressive muscle relaxation training produced significant reductions in frontalis tension levels. However, EMG feedback was found to be generally superior in producing larger reductions in muscle activity, with a concomitant relief in anxiety symptoms, for a greater number of the Ss. *Journal abstract.*

12684. Closurdo, Janette S. (St Joseph Mercy Hosp, Pontiac, MI) **Behavior modification and the nursing process.** *Perspectives in Psychiatric Care*, 1975(Jan-Mar).

Vol 8(1), 25–36.—Presents a general review of behavior modification concepts, techniques, tools, theoretical models, and ethics, as seen by well-known behavior therapists. Examples of nurse-directed behavior change programs are given. It is concluded that behavior modification can be an integral part of the expansion of the nursing process into the area of patient management. (1½ p ref)—*M. L. Hogan.*

12685. Dawley, Harold H. & Aurich, L. W. (VA Hosp, Psychology Service, New Orleans) **Case study: Elimination of smoking behavior through aversive smoking and other procedures.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 799–802.—Discusses the effectiveness of aversive smoking in a 27-yr-old female. Treatment involved 9 sessions of aversive smoking (handling cigarette litter, stale smoky air, and rapid smoking). The drinking of water was encouraged as a substitute behavior. Total cessation occurred within 2 wks. Subsequent booster aversive-smoking sessions were administered as requested by S. Follow-up sessions at 3 and 6 mo showed no relapse.—*Journal abstract.*

12686. Dawley, Harold H. & Dillenkoffer, R. L. (VA Hosp, New Orleans, LA) **Smoking cessation: Risks involved in rapid smoking with hospital subjects.** *Newsletter for Research in Mental Health & Behavioral Sciences*, 1975(Feb), Vol 17(1), 24–26.—Rapid smoking as a treatment procedure to eliminate smoking behavior appears to be promising but there are risks, particularly with individuals suffering from cardiovascular disease. Individuals who are in poor physical health, significantly overweight, and 40 yrs of age or older are not accepted. In addition, those with an abnormal EKG or who experience chest pain associated with physical exertion or emotional stress are eliminated. People who are screened out are offered a treatment involving the handling of cigarette litter while smoking at a normal rate.—*S. M. Levin.*

12687. Dawley, Harold H. (VA Hosp, New Orleans, LA) **Aversive cigarette smoking with an habitual, excessive smoker.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 1008–1010. Exposed a 39-yr-old male psychiatric outpatient to aversive cigarette smoking for 6 wks. Treatment consisted of rapid smoking, handling of cigarette litter, and warm smoky air. S reduced from a baseline of 140 cigarettes/day to less than 20 at end of treatment. Follow-ups at 1, 2, 3, 6, and 9 mo indicated a smoking rate approximately 25% of baseline.—*Journal abstract.*

12688. Dinitz, Simon; Dynes, Russell R. & Clark, Alfred C. (Eds). **Deviance: Studies in definition, management, and treatment.** (2nd ed). New York, NY: Oxford U Press, 1975. xiii, 641 p.—Presents a collection of 65 papers on deviant behavior, emphasizing the legal, ethical, and moral questions that arise from the application of behavioral technology. Labeling and conflict theories of deviance, criminal deviation, deviant statuses, willing victims and victimless acts, and innovations in management, control, and treatment are discussed.

12689. Duke, Larry A. & Epstein, Leonard H. (Moccasin Bend Psychiatric Hosp, Chattanooga, TN) **Oral overcorrection: Side effects and extended applications.** *Journal of Experimental Child Psychology*, 1975(Dec), Vol 20(3), 496–511.—Investigated the effects

of the use of overcorrection (contingent toothbrushing with an oral antiseptic) for managing the thumbsucking behavior of 2 4-yr-olds enrolled in a specialized day-care program. In Exp I, the use of oral overcorrection to control 1 S's thumbsucking during language periods suppressed the behavior of the other S who was not treated but who witnessed the target S's treatment. The main effects of oral overcorrection were replicated in Exp II. Contingent overcorrection threats (warnings), used independently, were then shown to suppress thumbsucking behavior that had returned to its baseline level. These effects were maintained 1 mo after the threats were discontinued, but they did not generalize to other activity periods, particularly nap time. In Exp III, contingent threats suppressed the persistent nap-time thumbsucking of the child from Exp II. Increments in certain other (nonoral) inappropriate behaviors were correlated with the suppression of thumbsucking. Threats to use oral overcorrection contingent upon nonoral misbehaviors at nap time were not effective. However, the actual use of oral overcorrection for these categories of nonoral misbehavior served to suppress these behaviors.—*Journal abstract.*

12694. **Grim, Paul F.** **Relaxation, meditation, and insight.** *Psychologia*, 1975(Sep), Vol 18(3), 125-133.—Discusses the author's experience of learning autogenic training and progressive relaxation. When unable to reach a state of near absolute relaxation, he experimented with desensitization therapy, and attempted to hold an image completely still. To the extent that this was successful, clarity and objectivity of perception occurred which supports W. James and C. G. Lange's (1967) theory of the emotions, and those views which see muscle tensivity as a defensive process. It is suggested that had stillness been complete, omniscience would have resulted. Passages from literature on Eastern meditation and modern commentaries which bear on this observation are quoted extensively. (19 ref)—*Journal abstract.*

12695. **Grove, D. N.; Dalke, B. A.; Fredericks, H. D. & Crowley, R. F.** (Oregon State System of Higher Education, Teaching Research Div, Monmouth) **Establishing appropriate head positioning with mentally and physically handicapped children.** *Behavioral Engineering*, 1975(Fal), Vol 3(2), 53-59.—Four 10-16 yr old multiply

handicapped children were taught to hold their heads in an extended position during either 20- or 30-min therapy sessions, respectively, in 2 experiments. A collar was placed around the neck of each child which recorded whether the head was extended or nonextended. Social approval and/or music was delivered contingent upon the designated behavior which resulted in an increase in that behavior. Removal of this contingency resulted in an abrupt reversal to pretreatment levels. Data lend support to the use of the behavioral engineering approach to the problems of motor habilitation.—*Journal abstract.*

Results showing that the noise level in the dining room dropped significantly, that food grabbing decreased, and that there was less food spillage are reported.

12702. **Maultsby, Maxie C.** (U Kentucky) **Patients' opinions of the therapeutic relationship in rational behavior psychotherapy.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 795-798.—Argues that there are few concepts in traditional psychotherapy that are as widely accepted as being important as the therapeutic relationship. Like many behavior therapists, however, rational behavior therapists neither actively pursue nor even hypothesize a therapeutic relationship. For that reason, many traditional psychotherapists look at behaviorists with suspicion and are reluctant to use behavioral techniques. This study tried to resolve this difference in professional opinions by consulting patients, the only legitimate experts on the issue. 77 outpatients (average age, 24 yrs) in rational behavior therapy completed the Taylor Manifest Anxiety Scale and described their relationship with the therapist and their perception of the influence of that relationship on their progress in therapy. Results imply (a) if a therapeutic relationship is a distinct entity, it's probably an incidental result of effective psychotherapy; and (b) friendly concern is

probably all any therapist needs to achieve therapeutic success.—*Journal abstract.*

12703. McGlynn, F. Dudley & McClaren, Harry A. (Mississippi State U) **Components of desensitization in modification of fear among genuinely fearful subjects.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 959-969.—40 female undergraduates were identified (using the Fear Survey Schedule-II) who could not pick up a snake despite an incentive to do so. All Ss were given the Snake Anxiety Questionnaire and a behavioral avoidance test, and 32 Ss were then used to study the fear-reducing capability of semi-automated desensitization and of dismantled procedural components of desensitization. For the "genuinely fearful" Ss neither desensitization nor component procedures reduced fear-avoidance more than did a behaviorally inert "treatment" for 8 controls. This result calls into question the interpretive status of much previous research and suggests guidelines for the methodology of future research. (37 ref)—*Journal abstract.*

12704. Muzekari, Louis H. & Kamis, Edna. (Philadelphia State Hosp. PA) **The effects of videotape feedback and modeling on the behavior of chronic schizophrenics.** *Journal of Clinical Psychology*, 1973(Jul), Vol 29(3), 313-316. Investigated the effects of videotape feedback and videotaped modeling on the verbal and performance behavior of 80 chronic psychotics (mean age, 52.6 yrs). Videotape feedback was effective in increasing task-oriented verbal behavior with no effect noted for performance behavior. The lack of change in patients who viewed models only suggested the use of models who demonstrate levels of behavior commensurate with the patients' potential ability and with whom they might identify more readily. The utilization of videotape feedback to facilitate interaction and teaching patients functional behavior is suggested.—*Journal summary.*

12705. Orr, Fred E.; Mitchell, Kenneth R. & Hall, Ralph F. (U New South Wales, Student Counselling & Research Unit, Kensington, Australia) **Effects of reductions in social anxiety on behaviour in heterosexual situations.** *Australian Psychologist*, 1975(Jul), Vol 10(2), 139-148. Investigated the effects of desensitization and relaxation training in reducing anxiety specific to heterosexual situations. 10 such situations had been developed during a 3-yr longitudinal survey of 988 students. Ss were 31 males who reported difficulties in social situations involving the opposite sex. Both traditional and short-term desensitization were effective but relaxation training failed to reduce heterosexual anxiety. (22 ref) —J. C. Figuerelli

12706. Pratt, Sandra J. & Fischer, Joel. (U Hawaii) **Behavior modification: Changing hyperactive behavior in a children's group.** *Perspectives in Psychiatric Care*, 1975(Jan-Mar), Vol 8(1), 37-42. Describes an operant reinforcement approach used by a psychiatric nurse in an activity group on a child psychiatric unit to reduce the hyperactivity of one child. It is concluded that behavior modification can be an effective tool for psychiatric nurses when working with emotionally disturbed children.—M. L. Hogan.

12707. Rawlings, Dennis A. (Oklahoma State U) **The effects of three versions of covert sensitization on the reduction of the maladaptive behavior of smoking.**

Drug Therapy

12715. Abe, Kazuhiko. (Osaka City U, Medical School, Japan) **Sulpiride in school phobia.** *Psychiatra Clinica*, 1975, Vol 8(3), 95-98. Administered sulpiride to 21 9-17 yr olds with school phobia. All had shown some depressive symptoms and had been treated by nonpharmacological measures. 13 of them returned to school within a few days and depressive symptoms disappeared eventually (the recovered group). In 3 behavior at home returned to their premorbid status, but school refusal persisted (the improved group). In the remaining 8, no improvement was observed. It is noted that, in comparison to previous experience with imipramine and benzodiazepines, the response to sulpiride in school-phobic children was more rapid and remarkable.—*Journal abstract.*

12716. Akreu Titton, Joao; Boazetti, Antonio C.; de Almeida Luiz, Albano M. & Rachid, Acr. (Federal U of Parana, Brazil) **Therapy of anxiety in patients with**

rheumatic disease: Crossover double-blind study comparing lorazepam with placebo. *Psychosomatics*, 1975, Vol 16(3), 120-123.—Conducted a double-blind crossover study in which 27 patients with rheumatic disorders and other clinical conditions received, besides specific therapy, either lorazepam or placebo. Lorazepam, at a dose of 2 mg/day in divided doses, adequately controlled anxiety and was well tolerated. Placebo had much less effect, and the patients' status deteriorated when placebo was substituted for lorazepam in the 2nd 2-wk phase (the crossover period). Somnolence occurred in 8 Ss, including 6 in the lorazepam and 2 in the placebo phase of the treatment.—*Journal summary*.

12717. **Ananth, J.** (McGill U, Montreal, Canada) **Psychopharmacology and psychosomatic illness.** *Psychosomatics*, 1975, Vol 16(3), 124-128.—Reviews principles, models, and therapeutic applications of psychopharmacology in the psychosomatic illness. (60 ref)—*A. S. Kulkarni*.

12718. **Ballinger, Brian R.; Ramsay, Anna C. & Stewart, Michael J.** (Royal Dundee Liff Hosp, Scotland) **Methods of assessment of drug administration in a psychiatric hospital.** *British Journal of Psychiatry*, 1975(Nov), Vol 127, 494-498.—Attempted to determine whether the discrepancy rates in drug administration obtained by observation would be lower than that detected by urine testing when both methods were applied to the same population simultaneously. Two wards in a psychiatric hospital and 1 ward in a mental subnormality hospital were studied. Urine specimens were tested for psychotropic drugs, and ward drug rounds were observed to detect discrepancies in administration. Of the 266 instances of drug administration tested for in urine specimens, prescribed drugs were not detected in 7.9% of cases and nonprescribed drugs were found in another 29 instances. Observation was made of 3,689 instances of drug administration, and in 1.7% of these the drug was not given or taken as prescribed, whereas no instances of ingestion of nonprescribed drugs were observed. Reasons for the discrepancies and the different results obtained by the 2 methods are discussed.

Journal abstract.

12719. **Cunningham, Constance P.** (U Texas, Austin) **An exploratory study of the long term effects of drug use in hyperkinesis.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5752.

12720. **Doyle, Larry N.** (Yankton State Hosp, S Dakota Human Services Ctr) **Imipramine pamoate in depression.** *Psychosomatics*, 1975, Vol 16(3), 129-131.—In a double-blind study, 20 patients with depression received 1 dose/day (150 mg) of imipramine pamoate and 20 received 3 doses day (50 mg each) of imipramine hydrochloride. Both drugs were effective in reducing depressive symptoms. The advantages of once-a-day dosage (which are well tolerated) are enumerated, especially the fact that such dosage is known to result in much better patient compliance.—*A. S. Kulkarni*.

12721. **Evenson, Richard C.; Altman, Harold; Sletten, Ivan W. & Cho, Dong Wong.** (Missouri Inst of Psychiatry, St Louis) **Clinical judgment vs. multivariate formulas in assignment of psychotropic drugs.** *Journal of Clinical Psychology*, 1973(Jul), Vol 29(3), 332-337. 500 psychiatric ratings that utilized a mental status checklist

(Missouri automated mental status examination by I. W. Sletten et al) were collected based on 20 videotaped interviews with 20 19-69 yr old hospitalized psychiatric patients. Drug group assignment (major tranquilizer, minor tranquilizer, and antidepressant) made by clinicians was compared with computer assignments based on multivariate formulae utilizing mental status items as a means to validate formulas derived earlier from prototype and videotape data. These comparisons resulted in computer agreement with clinical consensus for assigned drug group that ranged from 67% to 80%. Critical items that discriminated best across groups are discussed.—*Journal summary*.

12722. **Everett, Henry C.** (Private practice, Andover, MA) **The use of bethanechol chloride with tricyclic antidepressants.** *American Journal of Psychiatry*, 1975(Nov), Vol 132(11), 1202-1204.—Describes the use of bethanechol chloride to relieve side effects which result from the anticholinergic action of tricyclic antidepressants. It is suggested that cholinergic medication during antidepressant therapy may extend the use of the tricyclics to patients who find anticholinergic side effects especially troublesome.

12723. **Falck, Ingeborg.** (Städtisches Krankenhaus für Chronische und Alterskrankheiten, Berlin, W Germany) **[Voice-alteration by anabolic agents in geriatrics.]** (Germ) *Zeitschrift für Gerontologie*, 1975(Sep-Oct), Vol 8(5), 355-357.—Observed approximately 3,500 geriatric patients who were treated with anabolic hormones during a 10-yr period. In 116 patients under the age of 71 yrs there were 4 cases of voice masculinization after treatment with metholone but not after nandrolone or nortestosterone. However, the adverse effects may have been related to the dosage.—*E. Furchtgott*.

12724. **Hopkinson, G. & Kenny, F.** (Memorial U of Newfoundland, St John's, Canada) **Treatment with reserpine of patients resistant to tricyclic antidepressants: A double-blind trial.** *Psychiatra Clinica*, 1975, Vol 8(3), 109-114.—Examined the literature concerning the therapeutic effects of the administration of reserpine to patients who fail to respond satisfactorily and conducted a double-blind study with 14 female patients. Eight were given 5 mg reserpine intramuscularly and 6 were given 2 ml normal saline on 2 successive days. The administration of the tricyclic antidepressants the patients had been taking, was continued. The Hamilton Depressive Rating Scale was administered on the day before treatment was commenced, and repeated on the 4th day. Statistical analysis revealed that the patients who received reserpine showed a highly significant improvement of a good quality. The mean fall in the Hamilton rating for the placebo group was 6 points, and in the reserpine group it was 18.87. The therapeutic significance of the findings is discussed.—*Journal abstract*.

12725. **Jacobson, Ruth S.** (Boston U, School of Education) **A comparison of the relative efficacy of special class education and drug therapy for children with selected learning disabilities.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1530-1531.

12726. **Ketel, Richard.** (U Michigan Hosp, Neuropsychiatric Inst) **High-dosage and versatile drug therapy with treatment-resistant psychotic patients.** *Hospital & Community Psychiatry*, 1976(Jan), Vol 27(1), 37-39.—Ar-

gues that many of the chronic patients in psychiatric institutions and mental health facilities could be helped if physicians were more willing to try different combinations and higher dosages of psychotropic drugs than are commonly used. Case studies of 2 chronic patients who were helped by innovative use of drugs are presented, and factors to be considered in complementing high-dosage and versatile drug therapy are discussed. —*Journal abstract.*

12727. **Krakowski, Adam J.** (Champlain Valley-Physicians Hosp. Medical Ctr, Plattsburgh, NY) **Non-specific factors in psychopharmacotherapy.** *Psychosomatics*, 1975, Vol 16(3), 132-134. Discusses the psychosomatic model of treatment of mental illness which is based on the principle that the causes of mental illness are multiple, and that biological and psychosocial approaches to treatment are required. The nonspecific factors in psychopharmacology relate to the psychosocial components of illness. These factors, especially the placebo effects, are as important as the pharmacological influences. All should be well understood before any chemotherapy of mental illness is undertaken. *Journal summary.*

12728. **Martin, A. et al.** [Electrogastric and enterographic studies of the digestive-motor effects of extended psychotropic treatment.] (Fren) *Annales Médico-Psychologiques*, 1975(Jul), Vol 2(2), 323-335. Functional digestive complaints are frequent among psychiatric patients: common constipation, occlusions and occasional hemorrhages, and a delayed but significant increase in the occurrence of dolichomegacolon. To understand better the pathophysiology of such digestive-motor disorder, diurnal recordings were made by the electrogastricenterograph (EGEG), which uses skin electrodes placed on the abdomen and extremities, on 160 female psychiatric patients 18-27 yrs old. A hypoactive EGEG was observed in 12 of 18 psychotic depressive patients and in 27 of 36 schizophrenics. A noxious effect was associated with the administration of sedative phenothiazine and antiparkinsonian drugs (trihexyphenidyl or ethylbenzotropine), while non-sedative phenothiazine and clothiapine in small doses had no such effect. Noncoordinated digestive-motor activity (digestive dyskinesias) were observed in over half of 30 Ss under treatment for a character disorder, coincident with a high frequency of EFG dysrhythmias among these patients. Normal EGEG tracings were found in 8 hysterical Ss, confirming at a physiological level the clinical view that hysterical and psychosomatic symptoms may succeed each other, but rarely appear at the same time. 12729. **Pactz, D.; Krüskemper, G. & Gillich, K. H.** (U Dusseldorf, Medizinische Klinik, W Germany) [Psychological test performance in hospitalized climacteric patients during treatment of internal disorders, with special emphasis on the effects of estrogens and progesterone.] (Germ) *Zeitschrift für Gerontologie*, 1975(Sep-Oct), Vol 8(5), 358-364. Administered personality questionnaires to 45 patients with various somatic diseases every 2nd day after admission to hospital. The results clearly show that patients' well-being was influenced in a negative way in the hospital, although their scores did not reach the pathologic values

found in patients under psychiatric care. Patients' well-being was clearly reflected by changes in scores parallel to somatic alterations due to the process of disease. No statistically significant difference in well-being between 15 women given placebo and 2 groups of 15 women given estrogen or progesterone, respectively, could be established. In general, however, results confirmed expectations that women receiving hormone treatment tended to feel better than women in the placebo group. —*Journal summary.*

Speech Therapy

12736. Martin, Richard; St Louis, Kenneth; Haroldson, Samuel & Hasbrouck, Jon. (U Minnesota, Minneapolis) **Punishment and negative reinforcement of stuttering using electric shock.** *Journal of Speech & Hearing Research*, 1975(Sep), Vol 18(3), 478-490.—Subjcted 5 adult male stutterers to electric shock under 3 conditions. After stuttering frequency was stable in base rate, 3 Ss were (a) presented electric shock continuously, but the shock was terminated for 5 sec contingent on each stuttering (escape); (b) not presented electric shock continuously, but were given a burst of shock contingent on each stuttering (punish); and (c) allowed to choose the shock condition they preferred. 2 other Ss followed the same procedure, except that the order of the escape and punish conditions was reversed. The 5 Ss behaved differently in the various experimental conditions. For 3 Ss, the percentage of words stuttered changed very little in the escape condition, whereas 2 Ss' stuttering increased in escape. In the punish condition, the percentage of words stuttered changed very little for 1 S, increased for 2 Ss and decreased for 2 Ss. Little change in stuttering behavior occurred in the preferred choice condition.—*Journal abstract.*

12737. Ramirez, Luis H. (Clinica de la Conducta, Cali, Colombia) **[Treatment of stuttering by self-control procedures.]** (Span) *Revista Latinoamericana de Psicologica*, 1975, Vol 7(3), 421-434.—Describes behavioral self-control techniques and their application to a case of stuttering, which is considered to originate, by a process of classical conditioning, as an emotional conditioned response. In the present case delayed feedback and behavioral self-control were used with good results. Follow-up of the case indicated continued improvement a year after the end of treatment. 12738. Rawson, Margaret B. **I am me.** *Bulletin of the Orton Society*, 1975, Vol 25, 185-199.—Presents 2 letters written by a university student, one before and one after language therapy, and her autobiography describing her past successes and failures.—*G. R. Alley.*

12739. Small, Maurice M. (New Hampshire Hosp, Concord) **Treatment of stuttering: A case history.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 812.—Describes successful treatment of a 19-yr-old Black male which involved (a) behavioral analysis, (b) regulated breathing, (c) progress through a hierarchy of successive approximations of fluent speech with verbal reinforcement and punishment for fluency and dysfluency, and (d) initiation of conversations in increasingly difficult social situations outside the treatment room.

12740. Williams, Gail C. & McReynolds, Leija V. (U Kansas, Medical Ctr, Kansas City) **The relationship between discrimination and articulation training in children with misarticulations.** *Journal of Speech & Hearing Research*, 1975(Sep), Vol 18(3), 401-412.—Investigated, in the context of a training study, the functional relationship between discrimination and production. Ss were 4 5 7 yr olds. For 2 Ss, Condition I consisted of production training followed by a discrimination probe, and Condition II consisted of discrimination training followed by a production probe. For the other 2 Ss, conditions were reversed. In production

training, Ss were trained to articulate correctly 3 consonant-vowel (CV) syllables in response to nonsense pictures. In discrimination training Ss were trained to find nonsense pictures in response to 3 CV syllables. Probe measures were administered to determine if changes occurred in one modality after training the other modality. Results indicate that production training was effective in changing both articulation and discrimination; however, discrimination training was effective in changing only discrimination. Health Care Services

12741. Borreca, Frank A. (U Houston) **An historical and developmental perspective of community contingencies that affect the thrust toward selected services for the mentally retarded.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 7073.

12742. Bourgeois, M. (U Bordeaux II, France) **[Psychiatric aspects of adoption.]** (Fren) *Annales Médico-Psychologiques*, 1975(Jun), Vol 2(1), 73-103.—Adoption is of interest to psychiatry for reasons both theoretical (e.g., genetic and psychopathologic study) and clinical (e.g., selection for adoption). Although it is too simplistic to explain pathology entirely by adoption, there does appear to be a fairly common psychopathology among adoptees, characterized by a history of maternal deprivation and abandonment, and by certain aspects of the adoptive situation itself. There is statistical evidence that adopted children receive more pediatric and psychiatric examinations than other children. Adoptive parents show hyperconcern with the influence of heredity; adoptees are overly concerned with fantasy about their natural parents. The main hypotheses advanced for a pathogenesis of adoption are persistence of the good-bad child cleavage, reinforced by reality and fantasy (having 2 sets of parents), and the insecurity of adoptive parents about their role. Recommendations are offered for psychiatric aid in the selection of either adoptive child or parents and for guidance following adoption. (39 ref)—*H. E. King.*

12743. Christensen, Vagn. **[Problems of optimal growth and disease reactions in children of preschool age.]** (Danh) *Skolepsykiologi*, 1975, Vol 12(2), 143-159.

Reports findings of a county-wide survey conducted 1966-1973 by the medical health service concerning health problems of preschool children. In districts with a health visitor, 15% of the children (3,000) were referred for health service. The major problems were premature birth, growth and developmental difficulties, retardation, and congenital deformations. Study of social conditions revealed a larger number of "insufficient" parents and poor housing conditions. It is urged that the medical health service should be able to influence political action, since pathological conditions in high risk groups are difficult to prevent or counteract without changes in living conditions. The public health service is extensively debated, especially the role of the health visitor and her cooperation with other professions. *Journal abstract.*

12744. Feldman, Saul. (NIMH, Staff Coll, Rockville, MD) **Mental health under the umbrella.** *Hospital & Community Psychiatry*, 1976(Jan), Vol 27(1), 25-29.—Discusses the reorganization of state human-service programs into comprehensive or umbrella agencies.

Mental health staffs should not view these agencies as a threat but as a chance to develop new linkages and allies and new sources of funding. The mental health field can exercise some leadership in the agencies' development because of its experiences in coordinating diverse and autonomous mental health services into comprehensive community mental health networks. Principles learned from this type of reorganization that are applicable to all human services are discussed, including the need for common goals, written agreements, designated liaison staff, and a commitment to coordination.—*Journal abstract.*

12745. Fischer, Linda A. (Duke U) **Medical care utilization: An attempt to integrate theories and survey results.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 7341-7342.

(U Oregon Medical School, Portland) **Psychological factors in the management of juvenile diabetes.** *Journal of Clinical Child Psychology*, 1975(Fal), Vol 4(3), 43-45.—Summarizes results of research with 9-18 yr old diabetics and their families. Overall, information about diabetes and its management was not related to the level of diabetic control.—*W. V. Adams.*

12747. Greenblatt, Milton & Glazier, Elizabeth. (VA Hosp, Sepulveda, CA) **The phasing out of mental hospitals in the United States.** *American Journal of Psychiatry*, 1975(Nov), Vol 132(11), 1135-1140.—Views the current wave of closing state mental hospitals against the background of trends in mental health services during the past 20 yrs. Although a few hospitals have been totally closed, the overall number of institutions has remained stable due to the opening of new ones, and many states will be forced to consider phasing out additional hospitals. It is concluded that the state hospital is now qualitatively different from what it was 2 decades ago and is fast going into the community care business. The closing of hospitals is a social phenomenon that involves the lives and welfare of patients, personnel, families, and the community and poses a substantial political and logistical challenge. Suggestions are made for those who are contemplating closing hospitals in the future. (24 ref)—*Journal abstract.*

(U Oklahoma, Health Sciences Ctr, Oklahoma City) **Preparation of the patient and family for renal transplantation from a related donor.** *Journal of Clinical Child Psychology*, 1975(Fal), Vol 4(3), 41-43. Suggests ways in which the psychologist can prepare the patient and family when a child is suffering renal disease and is on dialysis, or is to be put on dialysis, while waiting for a kidney transplant from a related donor.—*W. V. Adams.*

Community Services & Mental Health Programs

12755. Andrulla, Dennis P. (U Texas, Austin) **Ethnicity as a variable in the utilization and referral patterns of a comprehensive mental health center.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 7034

12756. Bolin, David C. & Kivens, Laurence. (Minneapolis Medical Research Foundation, Program Evaluation Resource Ctr, MN) **Evaluation in a community mental health center: Hennepin County Mental Health Service.** *Evaluation*, 1975, Vol 2(2), 60-63. Describes a 4-yr evaluation project which tested the feasibility, validity, and reliability of goal attainment scaling. It is concluded that this project not only accomplished these goals, but also stimulated permanent interest in evaluation among staff and contributed to changes in the management and evaluation of services.—*J. R. Adams-Webber.*

12757. **Borus, Jonathan F. et al.** (Harvard U. Medical School, Boston) **The coordination of mental health services at the neighborhood level.** *American Journal of Psychiatry*, 1975(Nov), Vol 132(11), 1177-1181.—Notes that the neighborhood health center is becoming a major locus of mental health care delivery. Because of their strategic position at the neighborhood level, mental health care systems in the comprehensive health center locus have been able to develop linkages with both general health and community mental health systems to provide a broad continuum of coordinated health and mental health care. 4 models identified in a survey of 19 neighborhood mental health programs are described. It is suggested that persistent problems in coordination of care between neighborhood mental health and other caregiving systems would be considerably alleviated by a fiscal reimbursement scheme that rewarded integration rather than fragmentation of care. *Journal abstract*
12758. **Brown, Steven D.** **Self-control skills training.** *Professional Psychology*, 1975(Aug), Vol 6(3), 319-330.—Describes a 10-wk, 30-hr training course developed to provide clients seeking help through community mental health facilities with skills to control anxiety and increase self-confidence, assertiveness, and control over the actions of others in their environment. Instruction is given in the behavioral techniques of relaxation, anxiety management training, idealized self-image, assertiveness, and operant reinforcement. 70 people have participated in training since 1974. Results support the viability of the educational model and behavior self-control skill training in a community mental health setting, and illustrate the potential of training the client to be a change agent and social system modifier. (34 ref)—*Author abstract.*
12759. **Cohen, Mark; Zitter, Susan; Savarese, Ronald & Kern, Joseph.** (South Nassau Communities Hosp, Oceanside, NY) **Community drug abuse agencies: An effective approach to the drug abuse problem?** *Journal of Community Psychology*, 1976(Jan), Vol 4(1), 74-80.—Notes that community-based drug agencies (CBDA) were established as a means for confronting the drug abuse dilemma. However, due to the traditional guidelines that were followed in developing CBDA programs, the unique aspects of the problem were overlooked—the ability of the drug culture to satisfy basic human needs. To be effective, CBDA must be able to satisfy the same needs that clients previously met through participation in the drug culture. This article examines 3 areas of weakness which limit the effectiveness of CBDA: (a) fragmented delivery of services; (b) perpetuation of minimal client involvement, commitment, and responsibility; and (c) motivational considerations of board members. The alternative family structure is described as an innovative CBDA approach that directly relates to the uniqueness of the drug abuse problem. —*Journal abstract.*
12760. **Deasy, Lella C. & Steele, Carolyn I.** (Florida State U. School of Social Work) **An analysis of a state hospital population subject to release under Florida law.** *Hospital & Community Psychiatry*, 1976(Jan), Vol 27(1), 42-44.—Staff from the Florida State University School of Social Work analyzed 369 patients at Florida State Hospital from 1 catchment area and detailed their demographic characteristics, treatment needs, and inter-personal and financial resources. The researchers found that the area's 1 mental health center and 4 nursing homes would not be adequate community resources for meeting the patients' needs. They conclude that the release of many patients would create hardships both for the patient and for the service personnel in the community, and might be considered a violation of the intent of the Florida Mental Health Act.—*Journal abstract.*
12761. **Dincin, Jerry.** (The Thresholds, Chicago, IL) **Psychiatric rehabilitation.** *Schizophrenia Bulletin*, 1975(Sum), No 13, 131-147.—Traces the history of the psychiatric rehabilitation movement in the US and discusses the approach used in a Chicago rehabilitation center. Some of the components of rehabilitation programs are discussed, including vocational and social rehabilitation, residential programs, prevention of rehospitalization, and academic programs. Psychiatric consultation in psychiatric rehabilitation programs is also examined.—*M. E. Pounsel.*

The consumer model of assessing community mental health needs.** *Evaluation*, 1975, Vol 2(2), 71-73.—Describes a model of program planning in which the consumer serves as the major source of input in assessing mental health needs. This approach yields information about the priorities of needs for additional services by target problem, age group, and geographic area.—*J. R. Adams-Webber.*

12779. Windle, Charles & Ochberg, Frank M. (NIMH, Mental Health Services Development Branch, Bethesda, MD) **Enhancing program evaluation in the community mental health centers program.** *Evaluation*, 1975, Vol 2(2), 31-36.—Describes methods of self-evaluation, quality assurance, and external evaluation developed by

the National Institutes of Mental Health to aid community mental health services delivery and accountability.—J. R. Adams-Webber.

12780. Windle, Charles; Rosen, Beatrice M.; Goldsmith, Harold F. & Shambaugh, J. Philip. (NIMH, Mental Health Services Development Branch, Bethesda, MD) **Needs assessment methods for the community mental health center: IV. A demographic system for comparative assessment of "needs" for mental health services.** *Evaluation*, 1975, Vol 2(2), 73-76.—Describes a mental health demographic profile system for integrating demographic data, geographic descriptions of service areas, and types of services available. This system provides comparative demographic and service data for all community mental health center areas in the country.—J. R. Adams-Webber.

Hospital Programs & Institutionalization

12781. Beavers, Beverly C. (U Southern California) **An exploratory study of the psychological sequelae of surgery and hospitalization in male children.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5160.

12782. Bottinelli, Susan B. (Genesee County Community Mental Health Service, Child & Adolescent Inpatient Unit, Flint MI) **Establishment of an outpatient psychology screening clinic: Preliminary considerations.** *Journal of Clinical Child Psychology*, 1975(Fal), Vol 4(3), 30-31.—Relates the prerequisites and advantages to parents and house staff of an outpatient psychology screening clinic in a pediatric hospital.—W. V. Adams.

12783. Carrington, Harcourt A. (Fordham U) **A comparison of actual self-concept and ideal self-concept of psychiatric patients of two ethnic groups with implications for vocational rehabilitation.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1492.

12784. Cramer, Barbara J. (Southern Illinois U) **An analysis of the responses of residents from selective sheltered care facilities in Southern Illinois to the Community-Oriented Programs Environment Scales instrument.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5708.

12785. Croft, Roxanne G.; Johnson, William G. & Fox, Steven H. (VA Outpatient Service, Rochester, NY) **Locus of control in psychiatric patients.** *Newsletter for Research in Mental Health & Behavioral Sciences*, 1975(Feb), Vol 17(1), 17-20.—Studied internal vs external control of reinforcement in schizophrenic patients. 21 patients on the unlocked unit and 15 patients from the locked unit completed Rotter's Internal-External (I-E) Control Scale and were also rated by 2 nurses and a psychologist on 10-point scales of pathology and manageability. External locus of control was significantly correlated with pathology ($r = .35, p < .02$). I-E score was not significantly related to manageability or location of residence. S. M. Levin.

12786. Draper, W. (Virginia Treatment Ctr for Children, Richmond) **Introduction of the problem-oriented record into a child psychiatric hospital.** *Journal of*

the American Academy of Child Psychiatry, 1975(Win), Vol 14(1), 125-131.

12787. Eisenbach, Allan R. (United States International U) **The relationship between selected psychiatric treatment modalities and changes in behavior ratings and self-concept.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5186-5187.

12788. Kirksey, Judith A. (U Houston) **Evaluation of a residential environment for the severely physically disabled.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5197.

12789. la Roche, Christian & Ernst, K. (Kantonsspital Winterthur, Fraunklinik, Switzerland) **[The attitude of 200 hospitalized psychiatric patients and their doctors toward treatment.]** (Germ) *Archiv für Psychiatrie und Nervenkrankheiten*, 1975, Vol 220(2), 107-116.—One week after their admission to a psychiatric clinic, a representative sample of 200 patients were interviewed about their attitudes toward hospitalization and their opinion of the doctors, nursing personnel, psychopharmacology, and the industrial and creative occupational therapy they underwent. The 15 assistants treating them were asked their opinion of the attitudes of their patients toward some of these points. The patients answered less favorably with regard to their wards and to the hospitalization in general, but they reacted more positively to their doctors and nurses than to the various methods of treatment. There was no difference in the patients' attitude toward occupational therapy, and females were more critical than males. The opinions of the patients were in good agreement with those of the doctors.—English summary.

12790. Levy, Edwin Z. **Understanding sexual behavior in a therapeutic setting.** *Menninger Perspective*, 1974(Fal), Vol 5(3), 20-26.—Discusses how the professional staff can deal with the sexual behavior of adolescent patients in a hospital. Staff reaction to such behavior ranges from denial or severe punishment to viewing sexual behavior as a symptom of a disturbance. It is important to establish consistent guidelines for acceptable sexual behavior in the hospital, with patients participating in discussions and decisions. Patient violation of guidelines needs to be understood in the context of the type of violation, with whom it occurred, and the discomfort of the staff member in dealing with the incident.—D. H. Lamb.

12791. Liseno, Elizabeth M. & Kennedy, James L. (Worcester State Hosp, MA) **Measuring changes in the level of functioning of severely impaired geriatric patients.** *Massachusetts Journal of Mental Health*, 1975(Win), Vol 5(2), 18-29.—Investigated the effect of intervention intended to improve the care of geriatric patients, in a pilot study of 24 male residents of 1 ward of severely impaired patients (mean age 71.7 yrs, range 56-90 yrs). Ss were nonrandomly assigned to experimental and control groups. The Stockton Geriatric Rating Scale (SGRS) and the Minimal Social Behavior Scale (MSBS) were used to measure change. Pre- and posttests were taken by 2 raters. Pretest interrater reliability was .993 (MSBS) and .922 (SGRS). Posttest reliability was .994 (MSBS) and .785 (SGRS). The treatment group had 4 1-hr Sunday socials which included music and beer. Analysis of covariance for each measure indicated

significantly improved level of functioning on the more sensitive MSBS ($p = .001$). t -tests for correlated means showed a significant gain in functioning for the experimental group, but no significant difference from pre- to posttest for controls. Possible confounding effects and implications are discussed.—*P. R. Sweet.*

12792. Peshel, Margaret. (United States International U) **Relationship of adolescent history to psychiatric hospitalization and outcome.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5204.

12793. Prien, Robert F. (VA Hosp, Perry Point, MD) **Treatments administered to elderly psychiatric patients at seven Veterans Administration nursing home care units.** *Newsletter for Research in Mental Health & Behavioral Sciences*, 1975(Feb), Vol 17(1), 26-31.—Surveyed treatments administered to 475 patients and found that 67% received at least 1 psychoactive drug. Antipsychotic agents were the most frequently prescribed drugs, thioridazine being the drug most often administered. Nursing and rehabilitation programs were the most frequent nondrug therapies. Behavior modification was employed in 2 units. No patients with mental disorders had any therapeutic contact with a psychologist.—*S. M. Levin.*

12794. Riscalla, Louise M. (New Jersey State Diagnostic Ctr, Edison) **Staff relationships: Implications for effective service.** *Corrective & Social Psychiatry & Journal of Behavior Technology Methods & Therapy*, 1975, Vol 21(3), 20-22.—Contends that personality problems underlie all staff conflict, and perpetuate the pathology of patients in various ways. A staff member often tends to unconsciously identify with the patient to such an extent that he acts out the patient's pathology. Competitiveness leads to power struggles and jealousies which alienate staff from one another. Rivalry within and between departments hampers institutional efficiency and therapeutic efforts. Staff members in therapy are more concerned with bolstering their own self-esteem than with genuine caring for patients. Many staff members have arbitrary, negativistic attitudes toward institutional rules and regulations, and these attitudes convey permission to patients to act out antisocially. Staff delinquency is a problem frequently encountered. Racial and cultural prejudices contribute to increased tension. An institution may serve as a "home" for staff members without families, and possessiveness often results. In the final analysis, a facility's ability to function adequately depends to a great extent on the harmonious interaction between administrators, staff, and patients. Suggestions to facilitate staff relationships are offered. *J. Sorokac.*

Rehabilitation & Penology

12796. Baer, Daniel J.; Jacobs, Peter J. & Carr, Frances E. (Boston Coll) **Instructors' ratings of delinquents after Outward Bound survival training and their subsequent recidivism.** *Psychological Reports*, 1975(Apr), Vol 36(2), 547-553.—After participating in an Outward Bound survival training course, 60 male 15-17 yr old

delinquents were evaluated by patrol leaders. Successful students were awarded a certificate and all Ss were then paroled. A significant association was found between nonrecidivism within a 5-yr period and the awarding of a certificate. Principal components analysis of Kelly and Baer's 40-item Instructor Rating Scale, completed by the patrol leaders, yielded 6 factors. Significant correlations were found between nonrecidivism and the factor scores of Maturity, Leadership, and Effort. Results suggest that a rating based on Outward Bound performance can provide a long-term prediction of recidivism.—*Journal abstract.*

12797. Bennight, Katherine C. (Maryland State Employment Service, Baltimore) **A model program for counseling and placement of offenders.** *Journal of Employment Counseling*, (Dec), Vol 12(4), 168-173.—Describes the Maryland Comprehensive Offender Model Program, designed to deliver manpower services to offenders while they are incarcerated and until they are placed in training or employment. Counseling was based on the reality therapy model with a highly structured format for group sessions. The General Aptitude test battery and the Nonreading Aptitude Test Battery were used for vocational planning; Holland's Self-Directed Search was the most effective instrument. Supportive services were minimal and consisted mainly of arranging housing and temporary public assistance grants. Over half of the placements stemmed from individual job development, and this resulted in a placement rate higher than that usually achieved with applicants who do not have multiple barriers to employment. Results show that in a 2-yr period 2,795 clients were taken into the program. Of this number, 2,170 were released from institutions and available to work. Job placements were made for 941.—*Journal abstract.*

12798. Bernstein, Samuel. (Southern Illinois U) **The relationship of antecedent variables and process variables to differential outcome in a stress-challenge program.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5615.

12799. Cottrell, Jack D. (U Oklahoma) **A study of the personality differences between participators and non-participators in adult education programs in the prison system of Oklahoma.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1414.

12800. Duffee, David E. (State U New York, Albany) **Correctional policy, managerial style, and their relationship to the organizational climate in a minimum security prison.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 7356.

12801. Gillham, James & Bersani, Carl A. (U Akron) **Time and correctional workers' interaction techniques.** *Corrective & Social Psychiatry & Journal of Behavior Technology Methods & Therapy*, 1975, Vol 21(3), 13-19.—Analyzes answers by 54 staff members of a juvenile court to a questionnaire asking them to assess the time requirements of 6 different techniques employed in discussions with youths on avoiding past mistakes: (a) becoming openly upset with the youth; (b) discussing alternative courses of action open to the youth; (c) encouraging the youth to talk; (d) specifically following up on matters discussed at prior conferences and the effects of previous treatment; (e) describing the experi-

ences of others; and (f) reinforcing the youth's own efforts. Responses indicated that the most time-consuming technique was discussing alternative courses of action. The next most time-consuming technique was getting upset with the youth; telling him about the experiences of others was also time consuming. These findings suggest that a court worker's options can be evaluated in terms of the amount of time likely to be required to achieve the desired results. The findings may also serve to guide workers, particularly those still forming habits for dealing with youths. Juvenile court administrators may wish to encourage their staffs to use the more time-effective methods. These findings may also offer a more precise way to assign caseloads. (17 ref)

12808. Nellessen, Lothar. (U Bonn, Psychological Inst. W Germany) [Institutional requirements of social therapy in penal settings: An attempt to simulate models and methods in sociodrama.] (Germ) *Gruppensystemik: Forschung und Praxis*, 1975(Feb), Vol 6(1), 50-72.

—Reports a seminar held August 27-31, 1973, in Bonn-Venusberg, with 32 participants from legal, sociological, and psychological fields. Two days of sociodrama gave the participants an opportunity for emotional and cognitive learning; in the 2nd part of the seminar concepts of social therapy were clarified and professional questions were discussed. For the sociodrama, participants were divided into groups representing inmates of penal institutions, guards, and therapeutic, medical, supervisory, or administrative personnel. Their simulation of the working out of conflict situations was observed by psychologists and discussed within and among groups. The success of social therapy in penal settings is thought to depend on (a) the selection and modification of appropriate therapeutic techniques, (b) viewing the institutions as a therapeutic setting, and (c) accepting new ideas concerning personnel functions in the light of the therapeutic goals. (16 ref)—M. J. Stanford.

12809. Pereira, Francisco. (U deLos Andes, Bogotá, Colombia) [Applications of psychology of learning to the rehabilitation of the "gamin."] (Span) *Revista Latinoamericana de Psicologica*, 1975, Vol 7(3), 391-399.—The principles of the psychology of learning can be applied to the problem of the "gamin," the abandoned child of the Colombian cities. Several points in which psychology can contribute to understanding and solving this important social problem are described.—English summary.

12811. Prasad, R. (All India Inst of Medical Sciences, New Delhi) **Guidance services for the physically handicapped.** *Journal of Vocational & Educational Guidance*, 1974(Jun-Dec), Vol 16(1-2), 67-72.—Outlines the present status of occupational guidance and counseling services available in India for the physically handicapped and suggests how these services can be improved. Statistics on vocational rehabilitation services are presented and the structure of the rehabilitation process within the usual medical context is described. Ten reasons are given why vocational rehabilitation services in India are considered unsatisfactory, and suggestions for improvement are offered.—F. P. Stetz.

12812. Schnorr, Richard M. & Younkins, Ronald P. **Educating the uneducable: Working with adolescent offenders in a probation setting.** *Corrective & Social Psychiatry & Journal of Behavior Technology Methods & Therapy*, 1975, Vol 21(3), 7-9.—Describes the Alternative to Detention Program, comprised of 5 nonresidential, community-based day centers, each staffed by 2 teachers, a probation officer, 3 community workers, and various consultants. At the Jamaica Day Center the success of the educational program is based on the staff's contention that the students are capable of achieving and that their history of failure can be reversed if they are given the proper opportunities and guidance. The educational environment is the open plan classroom and the specific instructional techniques are peer-mediated instruction, in which a more advanced student tutors another student in need of remedial work, and pupil

teaching, which encourages students to undertake independent research projects and to report their findings to the class. The Center's flexible open education approach with its emphasis on the individual differs greatly from the rigidly controlled and highly structured classroom. The control technique employed at the Center is a form of behavior modification based on a system of rewards for desired social behavior and for the achievement of certain goals. The ultimate objective of behavior modification is to create permanent, responsible, and productive behavior patterns rather than to merely control a specific situation.—*J. Sorokac.*

12813. **Schultz, Christine G.** (Ohio State U) **Sociopathic and non-sociopathic female felons.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 7357.

12814. **Shah, J. H.** (Gujarat U, School of Psychology, Education & Philosophy, Ahmedabad, India) **Guidance for the physically handicapped.** *Journal of Vocational & Educational Guidance*, 1974(Jun-Dec), Vol 16(1-2), 58-63.—Defines the term "physically handicapped" and divides handicapped persons into 3 groups: (a) the sensorily impaired, (b) the orthopedically impaired, and (c) those impaired by physical illness. Rehabilitation programs should take into account both the rights and the responsibilities of the handicapped. The 4 component parts of vocational rehabilitation are counseling, training, placement, and follow-up. The guidance counselor should combine knowledge of the capacities of persons having various handicaps with a competence to assess their attitudes and interests, and should then match their ability patterns with the patterns of performance requirements of jobs. Four barriers to placing the physically handicapped are discussed.—*F. P. Stetz.*

12815. **Stewart, Garvin K.** (E Texas State U) **Rehabilitation gain and adjustment: Halfway house residency v. nonresidency.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5646.

12816. **Stokes, Jim D.** (E Texas State U) **An investigation of attitudinal and motivational changes occurring in the paroled inmate during a pre-release center program.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5646.

Individual follow-up interviews were conducted, and statistical analysis of the data attempted to determine what had happened to the boys who had been cared for, and how their stay at the halfway house had been helpful to them. (17 ref)—*D. F. Herran.*

12818. **Trahair, R. C.** (La Trobe U, Bundoora, Australia) **Structural role theory and the total institution.** *Australian Journal of Psychology*, 1975(Apr), Vol 27(1), 31-40.—Notes that in a description of total institutions, E. Goffman (1961) stated that his classification was not neat, exhaustive, or of immediate analytic use. The present paper uses the terms of structural role theory to overcome these problems. When Goffman's 3

criteria are used simultaneously, there emerge 8 instead of 5 categories of total institutions. The structure of the inmate role is analyzed by using the categories of a structural role theory and relating them to F. H. Allport's (1933, 1962) idea of partial inclusion. The analysis is presented in the form of propositions for empirical research, and comments are made on the practical value of the analysis. (18 ref)—*Journal abstract.*

Drug & Alcohol Rehabilitation

12821. **Annis, Helen M. & Smart, Reginald G.** (Alcoholism & Drug Addiction Research Foundation of Ontario, Toronto, Canada) **The Ontario detoxification system: Influence on drunkenness arrests in Toronto.** *Ontario Psychologist*, 1975(Oct), Vol 7(4), 19-24.—Describes Ontario's 12 detoxification centers (DCs) to which police can bring public inebriates without laying a criminal charge. Each DC is attached to a local hospital but is in a separate location. Staff are nonmedical but have been trained to identify cases requiring immediate medical treatment. The staff initiate referrals of residents to various local treatment programs. Statistics indicate that the DCs have had no effect on the number of arrests for public inebriation. This may be because they have too few beds and too long an average stay.—*A. Krichev.*

12822. **Blake, B. George & Grey, Pauline M.** (Oshawa General Hosp, Pinewood Ctr, Toronto, Canada) **Electrical aversion therapy: Some considerations.** *Ontario Psychologist*, 1975(Oct), Vol 7(4), 30-35.—Re-examines the use of electric shock as the noxious stimuli in aversion therapy with alcoholics. Mixed results have been obtained in a variety of situations with a lack of uniformity in conditions and controls. It is concluded that conditioned aversion techniques are as much influenced as other learning processes by interaction between the organism and its environment and the cognitive processes at work.—*A. Krichev.*

12823. **Brown, Barry S.; Glendinning, Sara T. & DuPont, Robert L.** (Narcotics Treatment Administration, Washington, DC) **Instances of treatment for opiate and nonopiate drugs in one urban community.** *International Journal of the Addictions*, 1975(Oct), Vol 10(5), 801-813.—Conducted a study to learn the extent of drug abuse coming to the attention of treatment personnel in private and public facilities within 1 urban community during a 1-mo period. Reports from 105 facilities indicated alcohol was the major drug of abuse with heroin and nonopiate drugs running a distant 2nd and 3rd, respectively. Of 8,784 requests for treatment in which the use of drugs was seen as a factor, 83% involved alcohol, 9% opiates, 6% nonopiate, nonalcoholic drugs, and 2% unknown drugs.—*Journal summary.*

12824. Clayton, Alfred R. (E Texas State U) **The ability of selected variables to predict sobriety.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 6971.

12825. Copemann, Chester D. (State U New York, Stony Brook) **Drug addiction: I. A theoretical framework for behavior therapy.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 947-958.—Literature on drug treatment efficacy consistently shows a disappointing 10-20% recovery rate which may suggest a Hawthorne-like effect. Contrary to the pessimism resulting from poor treatment outcomes, however, are the findings reported from animal morphine addiction experimentation. A learning theory framework of drug addiction is presented, and findings from animal addiction studies are used to demonstrate the possible usefulness of learning theory in accounting for development of tolerance, abstinence, and relapse and are suggestive of the overall value of learning theory as an alternative explanation of drug addiction. Such a sociopsychological formulation of drug addiction would have significant implications in terms of more systematic and individualized treatment intervention procedures. Additionally, treatment procedures would be directly related to theory and demonstrated laboratory results and thus have a higher probability of success and accountability. (38 ref)—*Journal abstract*.

12833. Head, Viloet B. (Donwood Inst, Toronto, Canada) **Experiences with art therapy in short term groups of day clinic addicted patients.** *Ontario Psychologist*, 1975(Oct), Vol 7(4), 42-49.—Suggests that art therapy with verbal psychotherapy can increase the progress of a short-term group and the depth of personal exploration. Art can free the nonvocal person to communicate about himself and can add structure to the group. Distancing through the art media permits a more objective view of one's conflicts which are thus experienced as less threatening. Since addiction to a depressant chemical can lead to years of physical and psychological anesthetizing, art adds variety and stimulation, affords some physical movement, and leads to self-searching.—*A. Krichew*.

12834. Huberty, David J. (Central Minnesota Mental Health Ctr, Detoxification & Halfway House Services, St Cloud) **Treating the adolescent drug abuser: A family affair.** *Contemporary Drug Problems*, 1975(Sum), Vol 4(2), 179-194.—Examines the critical influence of the family in the development and maintenance of drug dependence during the adolescence (13-17 yrs old) of the drug abuser. If this is not recognized, and if the family is not included in the treatment program, every member may in some way sabotage the program. Circular causality, or mutually interacting relationships, rather than a unidirectional cause-effect relationship, best describe the family problems in addiction. Seven interacting problem areas are identified: (a) ignorance of chemical dependency, resulting in attributing too much or too little effect to the drug; (b) denial of chemical dependency; (c) failure to accept responsibility; (d) avoidance of the expression of strong emotions; (e) ambivalence of emotions; (f) lack of honesty; and (g) parental drug abuse. Family-directed treatment serves to prepare the adolescent for independence and better family communication.—*A. K. Hess*.

12835. Kastel, Pavle & Sedmak, Tomislav. (Institute for Mental Health, Belgrade, Yugoslavia) **[Mortality rate in treated alcoholics.]** (Ssrc) *Anali Zavoda za Mentalno Zdravlje*, 1973, Vol 5(4), 49-54.—In a sample of 365 male alcoholic patients 20-25 yrs old, who were treated as inpatients in a psychiatric hospital, the mortality rate was 4.11% within 3 yrs after their discharge. This is significantly higher than the 0.26% rate in the general male population.—*English summary*.

12836. Lowe, Warren C. & Thomas, Sam D. (VA Hosp, Shreveport, LA) **Selection of alcoholic patients for rehabilitation.** *Newsletter for Research in Mental Health & Behavioral Sciences*, 1975(Feb), Vol 17(1), 11-13.—Demographic data obtained at an intake inter-

view were found to be better predictors of posttreatment adjustment than measures derived from psychological tests.—S. M. Levin.

12837. **McLachlan, John F.** (Donwood Inst, Toronto, Canada) **Evaluation of addiction treatment programs.** *Ontario Psychologist*, 1975(Oct), Vol 7(4), 50-53.—Proposes that attention should be given to the selection of goal-related outcome variables and techniques for assessment of addiction treatment programs as is done with other types of treatment programs. The measurement battery may need to undergo continuous revision from study to study as more reliable and valid measures are evolved and as innovative treatments are introduced. Careful quantification of chemical intake is needed.—*Journal summary.*

12838. **Ottomanelli, Gennaro A.** (New York U) **The MMPI as a predictor of outcome in a methadone maintenance program.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7539.

12839. **Piorkowski, Geraldine K. & Mann, Edward T.** (Illinois State Psychiatric Inst, Chicago) **Issues in treatment efficacy research with alcoholics.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 695-700.—Notes that behavioral techniques have been widely used with varying degrees of effectiveness in the treatment of alcoholics. The present paper explores theoretically 2 widely used behavioral therapeutic methods, systematic desensitization and covert sensitization, along with traditional insight-oriented therapy. These techniques were used with 1 female and 13 male patients who completed the treatment program (out of 3 females and 27 males who started). At a 6-mo follow-up, only 3 Ss reported being totally abstinent from alcohol. There was no evidence of specific treatment effects, since each of the 3 Ss was in a different treatment condition. Merits and limitations of applying these treatment approaches to alcoholic patients are explored.—*Journal abstract.*

12840. **Quirk, Douglas A.** (Private practice, Toronto, Canada) **Treatment for epileptic alcoholism.** *Ontario Psychologist*, 1975(Oct), Vol 7(4), 36-41.—Formulates a possible model to account for those cases in which alcohol ingestion is frequently followed by epileptiform behavior. The model assumes that a particular substance in the type of alcoholic beverage ingested is an allergen producing an inflammatory response in nervous system tissue. This leads to deionization across as well as along fibers and then to the epileptiform behavior. If the formulation obtains in some cases, then interference with the epileptic behavior should serve to interfere with the alcoholism. Three cases are presented to indicate that the use of sensorimotor rhythm and skin temperature training can sometimes modify the epileptic element and that, in turn, the alcoholism will be modified.—A. Krichew.

12841. **Rice, David P.** (Florida State U) **The role of cognitive mediators in aversive conditioning of alcoholics.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5207-5208.

12842. **Sanchez-Craig, Martha.** (Addiction Research Foundation, Toronto, Canada) **A self-control strategy for drinking tendencies.** *Ontario Psychologist*, 1975(Oct), Vol 7(4), 25-29.—Describes a strategy which involves the following steps: (a) The client identifies drinking

episodes which resulted in negative consequences, situations in which he was able to cope effectively with drinking tendencies, and the feelings and events associated with each. (b) For each episode the client generates self-statements to counteract his thoughts, feelings, and rationalizations. (c) The client is introduced to cognitive rehearsal strategies and learns to verbalize the self-statements effectively. (d) A full range of coping mechanisms using self-statements is generated. This program is being currently used in a halfway house and appears to be effective, but formal evaluative data are not yet available.—A. Krichew.

12843. **Schneider, Katherine S.** (Central Louisiana State Hosp, Pineville) **Helpfulness of treatment and alcoholic characteristics.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 690.—Results of obtaining alcoholic inpatients' perceptions of treatment methods show that they rated group therapy, the program in general, and being away from drinking most positively. In general, ratings of helpfulness were unrelated to such variables as age, number of previous hospitalizations, level of education, and score on Rotter's Internal-External Control Scale.

12844. **Sedmak, Tomislav & Djordjević-Banković, Vera.** (Institute for Mental Health, Belgrade, Yugoslavia) **[The role of the therapeutic community council in treating alcoholics.]** (Srcr) *Anali Zavoda za Mentalno Zdravlje*, 1973, Vol 5(4), 41-47.—In a 30-bed ward for treatment of alcoholics, the therapeutic community council was established in order to increase the communication between the staff and patients. In addition to 7 patients elected by their peers every 2 mo, members of the council were the staff psychiatrist, nurse supervisor, and occupational therapist. Meetings were held once a week and dealt with new admissions, conflicts among patients or conflicts between patients and staff, and after-hours activities. The council is credited with improving the therapeutic environment of the ward.—*English summary.*

12845. **Silverstein, Stanley J.** (Rutgers State U) **Training drinking alcoholics in self-control: Drinking decisions based on blood alcohol level estimations.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5211.

12846. **Spensley, James.** (U California, Medical School, Davis) **The adjunctive use of tricyclics in a methadone program.** *Journal of Psychedelic Drugs*, 1974(Oct-Dec), Vol 6(4), 421-423.—Tested doxepin and amitriptyline to reduce withdrawal symptoms during methadone maintenance treatment. The drugs had beneficial effects in 25 of 27 patients. (20 ref)—S. Nakajima.

12848. **Surgarman, Barry.** (Providence Coll, Dayton, OH) **Drop-out patterns in a therapeutic community: Behavior that does not correlate with social background and some implications for motivation.** *Corrective & Social Psychiatry & Journal of Behavior Technology Methods & Therapy*, 1975, Vol 21(3), 2-6.—Studied 209

clients admitted to Marathon House, a New England based agency operating residential therapeutic community (TC) drug programs. Of 16 variables, only ethnic group produced a significant chi square ($p < .01$). During the 1st mo in treatment Afro-American, Irish-American, and Italian-American clients all dropped out with greater frequency than other ethnic groups. In the period between 1 and 6 mo this was reversed. Blacks showed the highest rate of persistence in treatment and Italian-Americans the lowest rate of survival. A discussion of data from another TC drug program, Daytop Village in New York City, showed different dropout patterns. Some speculative discussion of fear-oriented and hope-oriented approaches to treatment in TC drug programs is offered to interpret the difference in direction of dropout patterns between the 2 TCs. The dropout in the 1st mo at Marathon House was 27% among court-related Ss and 43% among volunteers. After 1 mo, this pattern disappeared: the difference was barely perceptible and in the opposite direction. It is likely that the finding of this study—no correlation between social background variables and program dropout—is more typical of heavily hope-oriented than highly fear-oriented programs.—*J. Sorokac.*

12849. Uecker, Albert E. & Boutilier, Lynn R. (VA Hosp, Fort Meade, SD) **Knowledge of alcoholism, initial attitudes and attitude change: Indian vs. White alcoholics.** *Newsletter for Research in Mental Health & Behavioral Sciences*, 1975(Feb), Vol 17(1), 13-16.—Compared Indian and White alcoholics on (a) pretreatment attitudes toward alcoholism and related areas, (b) changes in attitudes due to treatment, and (c) the relationship between attitude changes and gains in knowledge. 27 matched pairs of Indian and White alcoholics were given the Passey and Pennington attitude scales and the Knowledge of Alcoholism Test (KAT) before treatment. Data from 16 pairs were available for analysis of treatment effects. The Indians had a significantly lower pretreatment score on the Education Concerning Alcoholism attitude scale but their variability was more than twice that of Whites. The 32 Ss who completed posttreatment testing showed significant gains in knowledge on 4 of the 5 KAT scales. White Ss increased significantly on the Attitudes Toward Treatment scale.—*S. M. Levin.*

12850. Ungerer, James C.; Harford, Robert J. & Coloni, Randall S. (Yale U Medical School) **Identification of dropouts at the initial stage of drug abuse treatment.** *Psychological Reports*, 1978(Dec), Vol 37(3, Pt 1), 945-946. Results of administering the Rotter Level of Aspiration Board task to drug-abuse treatment applicants indicate that, relative to applicants who actually entered treatment programs, applicants who failed to enter were significantly less realistic and less cautious in terms of their achievement aspiration.

PROFESSIONAL PERSONNEL AND PROFESSIONAL ISSUES

12852. ———. **Labor relations in mental health: A look at what's happening.** *Hospital & Community Psychiatry*, 1976(Jan), Vol 27(1), 45-52.—Reports on union activities, employee work actions, and problems in delivering proper mental health care, based on interviews with hospital superintendents, state and federal officials, union leaders, physicians involved in work actions, and lawyers. The union's main political focus of deinstitutionalization is discussed and criticized, and the efforts of professionals to air their problems and demands through collective action are cited.

12853. ———. **Report of the task force on sex bias and sex-role stereotyping in psychotherapeutic practice.** *American Psychologist*, 1975(Dec), Vol 30(12), 1169-1175.—Surveyed sex bias among psychotherapists in treating women patients, and found that both male and female therapists showed sexist attitudes. Task force recommendations for altering this situation are presented. (26 ref)

12854. ———. **Role of the employment counselor.** *Journal of Employment Counseling*, (Dec), Vol 12(4), 148-153.—Presents the officially adopted position paper of the National Employment Counselors Association. Included are the rationale for and definition of employment counseling; descriptions of the counselor's responsibilities to the applicant, the employing agency, the community, and the profession; and a listing of the basic competencies expected of the counselor.

12855. Abramson, Edward E. (California State U, Chico) **The counselor as a Machiavellian.** *Journal of Clinical Psychology*, 1973(Jul), Vol 29(3), 348-349.—Investigated the role of Machiavellianism in counseling. As predicted, 18 psychology graduate students who were specializing in counseling obtained higher scores on a Mach V Scale than 12 similar students in educational and general-experimental psychology. The relationships between Machiavellianism and 5 measures of counselor effectiveness were also tested. Results reveal a significant negative correlation between Machiavellian tactics and empathy. It is suggested that the findings warrant replication with a larger sample.—*Journal summary.*

12856. Adams, Paul L. (U Louisville) **The ideal training program in child psychiatry.** *Journal of the American Academy of Child Psychiatry*, 1975(Spr), Vol 14(2), 228-243. Contends that in programs for training child psychologists less emphasis should be placed on curriculum content and more on the character of those who give the training (instructors, residents, and related professionals) and on how they might react with students more helpfully. Among the topics discussed are motivation for teaching and the place of personal therapy.—*R. M. Cohen.*

12860. Anderson, Philip W. (U Maryland) **Accuracy in person perception in relation to training and experience in rehabilitation counseling.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7530.

12861. Atthowe, John M. (Rutgers Medical School, Coll of Medicine & Dentistry) **Legal and ethical accountability in everyday practice.** *Behavioral Engineering*, 1975(Fal), Vol 3(2), 35-38.—With increasing demands for greater professional responsibility and accountability, ethical and legal considerations are becoming part of everyday practice. This paper presents some of the issues involved and a suggested format, the goal-oriented treatment contract, in order to deal with the ethical issues that are now the subject of judicial and legislative review. It is suggested that behavioral engineers, by their concern for objectivity and evaluation, can play a prominent role in this quest to develop better methods of patient care and more effective treatment procedures.—*Journal abstract*.

12862. Balch, Philip & McWilliams, Spencer A. (U Arizona) **Community-based program evaluation through a graduate practicum in community psychology.** *Professional Psychology*, 1975(Aug), Vol 6(3), 331-336.—Discusses a model that provides training in the use of research skills to directly evaluate social programs. A training program, conducted as a practicum component to a community psychology course for doctoral students in clinical psychology, and based on the model, is described. The 4 components of the model are agency familiarization, goal development, data collection, and submission of results. The importance of evaluation to measure social agency accountability is stressed.—*Author abstract*.

12863. Barrows, Howard S. & Tamblyn, Robyn M. (McMaster U, Project for Learning Resources Design, Hamilton, Canada) **An evaluation of problem-based learning in a small groups utilizing a simulated patient.** *Journal of Medical Education*, 1976(Jan), Vol 51(1), 52-54.—In a study of the problem-formulation and self-study skills of 40 medical students, it was found that experimental Ss showed greater skills in both areas; they also showed greater motivation than controls in seeking clinical experience.

12864. Bernard, J. L. (Memphis State U) **Due process in dropping the unsuitable clinical student.** *Professional Psychology*, 1975(Aug), Vol 6(3), 275-278.—Discusses the problems inherent in counseling-out the unsuitable clinical or counseling student, with particular attention to the legal issues. Recommendations are based on a survey of 49 directors of clinical psychology training programs. A 4-step series of procedural guidelines is presented as a way of avoiding legal action on the part of the student, based on failure to follow due process.—*Author abstract*.

12874. Dickel, Charles T. (Indiana U) **The present and future curricular components of prepracticum counseling techniques courses in the United States.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7534.

12875. Drotar, Dennis. (Case Western Reserve U Medical School, Rainbow Babies' & Children's Hosp) **Clinical psychology training in the pediatric hospital.** *Journal of Clinical Child Psychology*, 1975(Fal), Vol 4(3), 46-49.—Describes the general settings, roles, and specific experiences available for clinical psychologists training in a pediatric hospital.—*W. V. Adams.*

12876. Epstein, Gerald M.; Weitz, Lawrence J.; Wallston, Barbara S. & Abramowitz, Stephen I. (George Peabody Coll for Teachers) **Professionals' preferences for support systems for the bereaved family.** *Journal of Community Psychology*, 1976(Jan), Vol 4(1), 69-73.—228 health-care-related professionals (nurses, clergy, teachers, psychologists, and social workers) responded to a questionnaire on which they rated the appropriateness and preferred timing of various community intervention strategies for assisting the bereaved individual. Results indicate (a) agreement about the general need for such assistance programs, but no consensus as to which were most appropriate; (b) endorsement of the "resumption of activity" ethic; (c) belief that the most desirable period in which to intervene is within 6 mo from the death; and (d) the lesser perceived suitability of therapeutic modalities that involve social contact with nonfamily members immediately following the death. Earlier introduction of family therapy and multiple family counseling was advocated by those Ss with greater experience treating the bereaved.—*Journal abstract.*

12877. Felton, Gary S. (Children's Hosp, University Affiliated Program, Los Angeles, CA) **A new role for the psychologist: Training the pediatric paraprofessional.** *Journal of Clinical Child Psychology*, 1975(Fal), Vol 4(3), 52-55.—Describes a paraprofessional training program for persons who might provide services needed by developmentally disabled, multihandicapped, and mentally retarded individuals and their families. Both academic studies and case experiences are considered.—*W. V. Adams.*

12878. Glazner, Charles A. (Texas Tech U) **An investigation of selected factors affecting counselor trainee ability to rate client nonverbal communication.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5627-5628.

12879. Glickman, Henry & De Scipio, William J. (Bronx Psychiatric Ctr, NY) **Training the child psychologist as a scientist professional.** *Professional Psychology*, 1975(Aug), Vol 6(3), 257-260. Suggests a behavioral training model as a means of exposing students, early in their graduate training, to a cooperative academic clinical arrangement designed to harmonize school learning with "real world" experience.

12880. Grosser, George H.; Pearsall, Doris T. & Cousins, Philadelphia. **Post residency psychiatric practice: A study of residents trained in Department of Mental Health institutions 1969-1973.** *Massachusetts Journal of Mental Health*, 1975(Win), Vol 5(2), 30-45. Surveyed psychiatrists who had completed the 3rd yr of residency training on Massachusetts state stipends at any state institution during 1969-1973. Of 136 questionnaires sent out, 91 returns were used. Questionnaire items included (a) address prior to residency, (b) college and medical school attended, (c) hospital of residency, (d) community mental health component of residency,

(e) distribution of professional time since residency, (f) type of facility and percentage of time spent in each type, (g) type of activity participated in, and (h) current and past employment by Massachusetts since residency. Frequency distributions of these items are given. Over 1/2 of the respondents devoted at least 50% of their time to public facilities for at least 1 yr following residency. Over the 4 yrs after training, commitment to the public sector decreased with concomitant increase in the private sector. The greatest commitment to the public sector involved activities related to patient care plus academic and administrative duties. Among professional activities in the private sector, 1/3 were activities relating exclusively to patient care.—*P. R. Sweet.*

12881. Hayden, Brian C. (U Florida) **Verbal and therapeutic styles of experienced therapists who differ in peer-related therapist effectiveness.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5192-5193.

12888. Keenan, Harry C. (Boston U, School of Education) **A study to evaluate orientation emphasizing humanness on freshman associate degree nursing students.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5634.

12889. Kenny, Thomas J. & Bauer, Rudolph. (U Maryland Medical School, Pediatric Psychology Program, Baltimore) **Training the pediatric psychologist: A look at an internship program.** *Journal of Clinical Child Psychology*, 1975(Fal), Vol 4(3), 50-52. Describes the highly diversified, interdisciplinary internship program for pediatric psychology in the Department of Pediatrics and the Division of Child and Adolescent Services of the

Department of Psychiatry at the University of Maryland School of Medicine.—W. V. Adams.

12890. Knoff, William F.; Oken, Donald & Prevost, James A. (State U New York, Upstate Medical Ctr, Syracuse) **Meeting training needs of foreign psychiatric residents in state hospitals.** *Hospital & Community Psychiatry*, 1976(Jan), Vol 27(1), 35-37.—Discusses the shortcomings of American residency programs for foreign trainees and describes how a program was developed to meet their special needs. Foreign medical graduates entering psychiatric residency programs in the US must cope with cultural, language, educational, and status barriers during their crucial 1st yr of training. The program includes a more authoritarian form of instruction, patterned after the educational structure the students were used to in their native countries, and courses in American culture, English language, and problem-solving techniques.—*Journal abstract*.

12891. Levin, Ellen M. (U Iowa) **Effects of a structured and nonstructured small group experience on counselor candidates' self-concept, interpersonal orientation, and perceptions of the group experience.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5635-5636.

12892. Lewis, Melvin. (Yale U, Child Study Ctr) **A model for a graduate education program in child psychiatry.** *Journal of the American Academy of Child Psychiatry*, 1975(Spr), Vol 14(2), 216-227.—Describes a program to develop competence in the areas of diagnosis, normal development, psychopathology, treatment, applications, and research.—R. M. Cohen.

12893. Lorenz, Alfred L. (Pädagogische Hochschule Rheinland, Abteilung Aachen, W Germany) **[The work of the psychodiagnostician in psychiatric hospitals.]** (Germ) *Psychologische Rundschau*, 1975(Apr), Vol 26(2), 112-130.—Describes the political and economic aspects of the function of the clinical psychologist in the West German mental health system. The psychologist as a wage earner is compared with other wage earners in the capitalist system. The main difference is his relative independence of the cyclical crises in capitalist production, since the capital depends, according to K. Marx, on a continuous and crisis-independent renewal of the work force. The political and economic relationships of patient, psychologist, physician, hospital, the health insurance system, and the state are sketched and analyzed. Statistics based on 800 inpatient records of the Giessen University Clinic of Psychiatry in 1969 and 1970 are presented to illustrate these relationships. (23 ref) H. A. Euler.

12895. McDermott, John F. (U Hawaii, Medical School) **Certification of the child psychiatrist: What is special about the specialist?** *Journal of the American Academy of Child Psychiatry*, 1975(Spr), Vol 14(2), 196-203.—Offers suggestions for changes in the certification process for child psychiatrists. Specifically, it is likely that certain aspects of competence in child

psychiatry should be measured during the training experience itself. Such measurement might be in several sections. Part 1 would involve local immediate supervisors; Part 2 might consist of a regional written examination measuring essential knowledge and information. Part 3 would be national in scope and would include a smaller and less dramatic Board Certification exam and a live assessment of clinical judgment and interviewing skills. Part 4 might consist of an ongoing recertification process.—*Journal summary*.

12896. McElhose, Robert T. (Michigan State U) **Supervisor-supervisee complementarity and relational distance as related to supervisor experience level.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7538.

12897. Melnick, Rosalie R. (Syracuse U) **Counseling response as a function of type of client problem and method of problem presentation.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 6981-6982.

12898. Melizer, Malcolm L. (George Washington U) **Insurance reimbursement: A mixed blessing.** *American Psychologist*, 1975(Dec), Vol 30(12), 1150-1156.—Discusses possible undesirable effects of expanded 3rd-party insurance coverage for mental health services. It is suggested that in the absence of uniform qualification standards, the number of unqualified persons offering mental health services will increase. The distribution of services may become more and more unbalanced as practitioners seek lucrative urban locations. Services will tend to be made available to the less troubled but more affluent, and the type of treatment chosen by the practitioner will tend to be the most extensive and expensive. Fewer practitioners will want to work in public institutions, where pressure is greater and remuneration smaller than in the public sector. Suggestions for needed self-regulation in the mental health field are made. The article is followed by comments from 3 psychologists and a psychiatrist.—I. Davis.

12899. Mims, Fern H. (U Cincinnati) **An interdisciplinary course in human sexuality for medical and nursing students.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1506.

12900. Nellis, Joseph L. **Comments on "professional liability insurance and the psychologist."** *Professional Psychology*, 1975(Aug), Vol 6(3), 272-274.—Considers that the problems of the professional liability of clinical psychologists have increased in direct proportion to the recent recognition of clinical psychology as a health-providing profession.

12901. Newman, Morton B. & San Martino, Mary. (Mystic Valley Mental Health Ctr, Lexington, MA) **The challenge of community child psychiatry: The role of ambivalence.** *Journal of the American Academy of Child Psychiatry*, 1975(Spr), Vol 14(2), 281-291.—Emphasizes that community child psychiatry is influenced by the beliefs of its practitioners and by the circumstances in which it is practiced and that effective clinical and administrative performance requires professional workers to evaluate this situation and to integrate their understanding of its requirements with their beliefs about good professional work. Awareness of the ambivalence which may result from these 2 positions and of the defenses used to manage it deepens understanding of

both the implications of the reality demands and the meaning of professional attitudes.—*Journal summary.*

12902. Nottingham, Jack A. (Georgia Southwestern Coll) **Solving community entry problems: Flotsdam and jetsam.** *Professional Psychology*, 1975(Aug), Vol 6(3), 299-309.—Explores the problems of community entry experienced by many professionals and offers tentative solutions based on the author's experience in a small Southern city. Community expectations, role definition, and the attainment of power are discussed. Guidelines are presented for selecting problems and partners in the community, including ways of dealing with opposition. The nature of community meetings is described, and suggestions are offered as to strategy and tactics. General difficulties accompanying community entry are described, including requirements for a conservative life style, the continuous nature of community work, and the game quality of some social situations.—*Author abstract.*

12903. Olson, Lawrence R. (E Texas State U) **The effects of immediate and delayed feedback on counselor trainees' acquisition of two interview behaviors.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5640.

12905. Pawlik, Kurt. (Psychologisches Inst I, Hamburg, W Germany) [The state of psychology.] (Germ) *Psychologische Rundschau*, 1975(Apr), Vol 26(2), 81-111.—Presents the address of the chairman of the Deutsche Gesellschaft für Psychologie to a convention in Salzburg in September 1974. The state of psychology in Germany, Austria, and Switzerland is characterized as follows: (a) In higher education new state and local examination and study regulations have been adopted. Increased importance is given to postgraduate and high school programs, to psychology as a minor study, and to the new subject, "medical psychology." Quantitative analyses of teaching and study capacities are presented; e.g., the current student teacher ratios are 20, 45, and 25, respectively. (b) On the state of psychology as a profession, statistics (mostly estimated) on employment figures are presented. The professional structure is described qualitatively and some trends are sketched; e.g., broader working fields, licensing, increased job flexibility, and increased professionalization. (c) With reference to the study of psychology in the universities, an analysis of the allocation of professors' time is presented which reveals a great lack of research time and widespread dissatisfaction with working conditions. (d) On the state of psychology as a science, publication trends are described and questions about the relevance and representativeness of psychology are discussed. (55 ref)—*H. A. Euler.*

12906. Pentlage, V. H. (U Massachusetts, Medical School) **Psychiatry in a small town.** *Massachusetts Journal of Mental Health*, 1975(Win), Vol 5(2), 14-17.

Discusses from personal experience the nature of the psychiatric practice of the only psychiatrist in a small town. Among the problems are (a) the inability of patient and psychiatrist to employ alternatives under negative conditions, (b) the psychiatrist's personal image in the community, (c) the psychiatrist's extensive involvement

in the personal lives of the people in his patient's life, (d) overburdened facilities as more referrals within the community are made, and (e) the need to be selective in time allocations to various types of patients.—*P. R. Sweet.*

12907. Ploeger, A. & Schleicher, V. (Rheinisch-Westfälische Technische Hochschule, Abteilung Psychiatrie der Medizinischen Fakultät, Aachen, W Germany) [Medico-sociologic analyses of the effectiveness of psychiatric consultation.] (Germ) *Archiv für Psychiatrie und Nervenkrankheiten*, 1975, Vol 220(4), 295-306.—Examined the assumption that hysterical syndromes occur more frequently among those inpatients who are referred from other departments of the institution than among the psychiatric outpatients referred by private physicians. The assumption was verified in both hysterical neurotics and hysterical personality structures. Moreover, phobic neurotics and depressive as well as infantile personality structures were underrepresented among the nonpsychiatric inpatients. These findings revealed a selection in psychiatric consultation. It is posited that certain reaction patterns of staff within the close communication network in a ward are responsible for this selection pattern. Nonpsychiatric physicians deviated from the advice given by psychiatrists only in the case of psychogenic psychosyndromes. Despite specific psychiatric advice, their therapeutic measures tended to be uniform. Apparently the nonpsychiatrist does not regard psychogenic psychosyndromes as diseases because of lack of objective consideration. It is concluded that the neutral patient-clinician interaction is disturbed in the case of psychogenic psychosyndromes. This fact limits the effectiveness of "indications" and "therapy" in psychiatric consultation. (18 ref)—*English abstract.*

12908. Raft, David & Spencer, Roger F. (U North Carolina, Medical School, Chapel Hill) **A psychiatrist's experience in pediatric endocrine conference.** *Psychiatric Forum*, 1975(Win), Vol 5(1), 28-30.

12912. Routh, Donald K. (U North Carolina, Biological Sciences Research Ctr, Chapel Hill) **The short history of pediatric psychology.** *Journal of Clinical Child Psychology*, 1975(Fal), Vol 4(3), 6-8.—Enumerates significant events in the development of both pediatric and clinical child psychology, including their development after their 1967 merger as the field of pediatric psychology.—*W. V. Adams.*

12913. Sherizen, Sanford M. (Northwestern U) Professional identity development and the acceptance of license-related performance requirements: A study of all but dissertation students. *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 2), 6128.

12914. Silverman, Wade H. & Fourcher, Louis A. A developmental approach to postdoctoral training in community psychology. *Professional Psychology*, 1975(Aug), Vol 6(3), 344-349.—Describes a training program designed to serve the needs of psychologists interested in developing the field of community psychology. The special concern of the future community psychologist is viewed as the promotion of psychological well-being in social systems. Based on this perspective, training experiences are described, emphasizing the generation of new conceptions of the psychologist's role in the community. Field placements and consultation experiences teach useful technical skills and provide opportunities for role experimentation. Seminars are offered to update knowledge in areas relevant to the field, and supervision is a collaborative learning situation in which field experiences are the foci for personal and intellectual development. Brief descriptions of field experiences, consultation efforts, and seminars are included.—*Author abstract*.

12915. Simon, Gottlieb C. Psychology and the "treatment rights movement." *Professional Psychology*, 1975(Aug), Vol 6(3), 243-251.—Analyzes recent legal developments articulating the rights of residents of public mental institutions. The involvement of psychologists in right to treatment litigation (e.g., *Wyatt vs Stickney*) is examined, and attention is called to the lack of incentives for client advocacy. Implications of the "treatment rights movement" on the practice of psychology are noted in several areas, including the definition of qualified practitioners, professional accountability, and increased emphasis on service in the community. Psychologists are urged to play an active role in advancing the rights of their clients, and the "advocate-professional" model is suggested as a supplement to the scientist-professional model. It is concluded that psychologists will be greatly affected by the treatment rights movement whether or not they choose to participate in it.—*Author abstract*.

(Judge Baker Guidance Ctr & Children's Hosp Medical Ctr, Boston, MA) Training the child psychiatrist: Views from a training director. *Journal of the American Academy of Child Psychiatry*, 1975(Spr), Vol 14(2), 204-209.—Emphasizes the need for a broad background in developmental theory and clinical skills, and research competencies.—R. M. Cohen.

12922. Tolor, Alexander. (Fairfield U, Inst for Human Development) Diagnosing the state of the diagnostic function: An analysis of the literature. *Journal of Clinical Psychology*, 1973(Jul), Vol 29(3), 338-342.—An analysis of the content of 5 major psychological journals that are publication outlets for clinical psychologists revealed a definite decline over a 20-yr period (1951-1970) in the percentage of diagnostically-oriented papers. Only 1 journal failed to disclose this trend. A further diminution of assessment publications is predicted unless a concerted effort is made to effect a basic reform of the traditional diagnostic approach.—*Journal summary*.

12923. Tucker, Mary A. (U Virginia) The effects of the human potential seminar upon counselor education students' level of self-actualization and ability to discriminate facilitative conditions. *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7541.

12924. Tuckman, Gary. (Central Bergen Community Mental Health Ctr, NJ) The training of psychotherapists within a Swedish university. *Nordisk Psykologi*, 1975, Vol 27(3), 191-200.—Describes a 2-yr program for training psychotherapists, which tried to integrate self-treatment, theoretical training, and technical training. This led to problems in teacher resources, the patient referral system, and the students' final paper. The program is considered low in cost and high in benefit.—P. Mylov.

12925. Tuma, June M. (U Texas, Medical Branch, Galveston) Pediatric psychologist...? Do you mean clinical child psychologist? *Journal of Clinical Child Psychology*, 1975(Fal), Vol 4(3), 9-12.—Describes similarities and differences between the pediatric and clinical child psychologist including functional roles and training.—W. V. Adams.

12926. Wasserman, Craig W.; Messersmith, Craig E. & Ferree, Elizabeth H. (American U Counseling Ctr, PEACE Program) Professional therapists, professional helpers, and graduate students: An uneasy alliance. *Professional Psychology*, 1975(Aug), Vol 6(3), 337-343.

Discusses the implications of the emergent paraprofessional as a viable mental health manpower resource. The

paraprofessionals are considered to possess competencies that make them more effective in working with specific population groups (e.g., drug abusers, alcoholics, and welfare recipients). The relationship between the professional and paraprofessional is seen as often complicated and conflictual because of authority and salary differences. In addition, the paraprofessional is considered to have caused the professional to alter his work role through the development of more refined competencies in the areas of supervision, training, and consultation. It is suggested that graduate programs in counseling, clinical, and social work develop courses and in vivo experiences to prepare the future professional more directly in these areas. (31 ref)—*Author abstract*.

12927. White, Alvin E. & Gross, Ruth B. **Professional liability insurance and the psychologist.** *Professional Psychology*, 1975(Aug), Vol 6(3), 267-271.—Questions the extent malpractice insurance protects psychologists with regard to their current needs. The need for professional liability insurance is reviewed. Concern about the greater visibility of psychology, the increasing use of the legal process for grievance settlement, and the nature of the legal investigative process as it relates to the psychologist's practice is expressed. 3 questions for psychologists to ask about insurance coverage are suggested.—*Author abstract*.

12928. Wiener, Florence D. (Columbia U) **A training program for identification of abnormal infant cries.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 6885-6886.

12929. Wright, Logan. (U Oklahoma, Health Sciences Ctr, Oklahoma City) **Pediatric psychology and problems of physical health.** *Journal of Clinical Child Psychology*, 1975(Fal), Vol 4(3), 13-15.—Outlines a variety of areas of potential concern for the clinical child psychologist in psychiatric and nonpsychiatric medical contexts.—*W. V. Adams*.

12930. Young, Carl E.; True, John E. & Packard, Mary E. (Pennsylvania State U) **A national study of associate degree mental health and human services workers.** *Journal of Community Psychology*, 1976(Jan), Vol 4(1), 89-95.—Interviewed 138 20-55 yr old graduates of associate degree mental health and human services programs to determine their work activities, adequacy of work performance, and job satisfaction. 77% were employed in relevant human services jobs. Data from Ss and 91 of their supervisors revealed that they were performing virtually the entire range of traditional mental health service functions and performing them well. A majority were satisfied with their work, although low salary levels and restricted opportunities for future advancement were recognized as problems. Many were receiving little supervision, and the user agencies had, for the most part, not developed appropriate in-service training programs. Findings appear to support the notion that the mental health associate is a valuable new source of manpower for the mental health and human services fields.—*Journal abstract*.

12931. Young, Rosemarie G. (U New Mexico) **Perceptions of a group experience by counseling students as related to self-concept and therapeutic functioning.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1454.

EDUCATIONAL PSYCHOLOGY

12932. Anasz, Marian & Bluszkowski, Jan. [Theoretical problems of egalitarianism in education.] (Polh) *Studia Socjologiczne*, 1974, No 3(54), 217-226.—Discusses 6 types of educational systems and how each one influences social development. It is concluded that a truly egalitarian system tends to maximize individual talents so that the needs of society can be met.—*H. Kaczowski*.

12933. Anderson, Eloise M. (Wayne State U) **Student involvement at Cass Technical High School, Detroit.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 6855.

12934. Anderson, Palmer R. (Humboldt State U) **Woman's place and the educational labeling process.** *Humboldt Journal of Social Relations*, 1974(Spr-Sum), Vol 1(2), 93-101.—Surveyed books, articles, and government documents to produce evidence that the sexist labels about superiority-inferiority, success-failure, legitimacy-illegitimacy created by institutions and organizations are followed and disseminated by the schools. These labels are involved in school tracking, guidance, and other socializing practices. It is concluded that social control of women arises from the link between the institutionalization of consciousness and the ritualistic bureaucratic responses. (27 ref)—*P. Babarik*.

12935. Barbe, Walter B. & Renzulli, Joseph S. (Eds). **Psychology and education of the gifted.** (2nd ed). New York, NY: John Wiley & Sons, 1975. xii, 481 p.—Presents material on the historical development of the psychology and education of the gifted, characteristics of the gifted and creative, and issues related to identifying and providing programs for highly able students. Underdeveloped talent and the teaching of the gifted, both at elementary and high school levels, are given special attention. (557 ref)

12948. Glatthorn, Allan A. (Alternative Schools Project, Elkins Park, PA) **The student as person.** *Theory into Practice*, 1974(Dec), Vol 13(5), 366-370.—Discusses the need to see the student as Person. In extending J. Farber's polemic, *The Student as Nigger*, the author also deals with the student as "colored man" and "Black militant." A school program involving "structure of commitment" to student needs is outlined which includes (a) a weekly town meeting, (b) an administrative council,

(c) special task forces, and (d) biweekly teacher-student counseling groups with 14 students per group.—*J. Carlson.*

12949. Good, Thomas L.; Biddle, Bruce J. & Brophy, Jere E. (U Missouri) **Teachers make a difference.** New York, NY: Holt, Rinehart & Winston, 1975. xiii, 271 p.—Attempts to document the fact that teachers and schools can and do make a difference in the educational progress of students, using findings from educational research and actual experiences. Topics include problems in previous research on teachers and schools, goals for education, individualization and open education, criterion-referenced testing, and measurement of non-cognitive variables. (13½ p ref)

12950. Heyting, Ellen. (Michigan State U) **Trends in general and alternative modes of education in their economic and social-psychological settings: A case study in Sweden.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7465-7466.

12951. Hieden, Josef. [The problem of pedagogical institutions in the pedagogy of groups, based on selected literature.] (Germ) *Gruppendynamik (Forschung und Praxis)*, 1974(Dec), Vol 5(6), 455-460.—Reviews part of the pertinent European and Anglo-American literature. Although in this field group dynamics is often discussed no clear ideas exist about the meaning of pedagogy of groups. The contributions of a number of scholars are evaluated. Several aspects of the topic which appear to have been ignored or neglected are pointed out and discussed.—*M. J. Stanford.*

12952. Hinojosa, David. (U Houston) **A study of the relationships between the organizational climate, the pupil control ideology and the self-esteem and power dimensions of the students' self-concept in selected elementary schools in the Corpus Christi Independent School District.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 6901-6902.

12953. Klare, George R. (Ohio U) **Judging readability.** *Instructional Science*, 1976(Jan), Vol 5(1), 55-61.—Tested the accuracy of judgments of 56 professional writers on 5 passages of text taken from a reading test. Ss were asked to rank the 5 passages from most readable to least readable. Results show wide variability in the judgments. Only a few Ss individually put the passages in the tested order of readability, but the consensus of the group put them in exactly that order. Further examination of results suggested that a relatively small number of gross errors in judgment were made. Accuracy of judgments, it appeared, might greatly increase with selection and/or training of judges. A readability formula is suggested as an accurate and convenient way of getting readability scores and helping a judge to increase his accuracy, but human interpretation of the scores is still felt to be needed. (17 ref)—*Journal abstract.*

12954. Leventhal, Les; Abrami, Philip C.; Perry, Raymond P. & Breen, Lawrence J. (U Manitoba, Winnipeg, Canada) **Section selection in multi-section courses: Implications for the validation and use of teacher rating forms.** *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 885-895.—Notes that studies on teacher evaluation and on the validity of teacher rating forms have often assumed section to section equivalence of students assigned by customary

registration procedures. To investigate the section selection process, a questionnaire containing items on personal history, reasons for section selection, and sources of information about the instructor was administered to 1,188 undergraduates in multisection 1st-yr and advanced psychology courses. Major findings indicate that (a) students significantly differed across sections on biographical variables and on section selection reasons; (b) time at which class was scheduled relationship and teacher's reputation were the primary reasons for section choice; (c) teacher's reputation was less important than classtime for 1st-yr students but comparable to classtime for advanced students; and (d) reports from other students and published ratings were, respectively, the 1st and 2nd most frequent source of instructor reputation information.—*Journal abstract.*

12972. Alpers, Erma D. (California State U, Los Angeles) **The minority woman in academe.** *Professional Psychology*, 1975(Aug), Vol 6(3), 252-256. Discusses the hiring practices and subsequent expectations placed on minority faculty in general and on minority women

faculty in particular, with special attention given to university psychology departments. These include (a) the undue emphasis given her sex and minority status at the expense of her professional competence; (b) the expectation that she will assume the role of arbiter, without real power to enact administrative changes, in disputes that involve Anglo faculty and minority students; (c) the expectation that she will conform to the White liberal's radical chic image of a minority that denies her individuality; (d) the resentment of her minority male colleagues when she competes for the marginal positions generally reserved for minorities at these institutions; and (f) the nonrecognition of her minority status by some feminist colleagues who portray the plight of oppressed woman in this country solely in terms of the White woman's experience.—*Author abstract.*

12983. Borg, Walter R. (Utah State U) **Protocol materials as related to teacher performance and pupil**

achievement. *Journal of Educational Research*, 1975(Sep), Vol 69(1), 23-30.—Trained an experimental group of 25 inservice intermediate grade teachers using 4 protocol modules which covered 12 specific teaching behaviors. Their performance before and after training was observed and compared with the performance of 15 control group teachers. Experimental Ss made significant gains on all 12 behaviors and significantly exceeded controls on 4 of these. At the end of the study, all Ss taught a 4-hr content unit in their own classrooms, and their pupils were given 2 achievement measures that focused on the content unit. Partial correlations were computed between pupil achievement on these 2 measures and S use of each of the 12 behaviors. Pupil scholastic ability, parent's occupation, and S coverage of the unit's content were partialled out. Ss' use of defining, voice modulation, paraphrasing, and cuing was significantly related to pupil performance on both achievement measures. Ss' use of opening review and terminal structure was related to 1 achievement measure. (28 ref) —*Journal abstract.*

12984. Brenneman, Orr N.; Willower, Donald J. & Lynch, Patrick D. (Cumberland Valley School District, TN) **Teacher self-acceptance, acceptance of others, and pupil control ideology.** *Journal of Experimental Education*, 1975(Fal), Vol 44(1), 14-17.—Studied the relationships between teacher self-acceptance, acceptance of others, and pupil control ideology in 342 elementary, middle, and high school teachers using E. M. Berger's measure of self-acceptance and acceptance of others and the Pupil Control Ideology (PCI) Form. 276 teachers responded to these instruments. Pearson product-moment correlations indicated self-acceptance was not related to PCI, but that high acceptance of others was associated with humanism in PCI. Regression analysis indicated that acceptance of others, followed by teaching level and teaching experience, predicted teacher PCI. Speculations on why self-acceptance was not associated with teacher views on control are presented, and data on sex and grade level differences among the teachers are examined. 12989. Cashen, Valjean M.; Ramseyer, Gary C. & Smith, Edwin B. (Illinois State U) **Needs and press of**

- teacher-education students: A 10-year study.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 803-808.—Performed a 10-yr comparison study of needs and press scores for those students enrolled in a teacher-education program at 1 university. Responses on the Activities and College Characteristics Indexes were contrasted for the years 1961 and 1971. 425 current prospective teachers exhibited less intellectual and dependency needs but greater needs for impulse expression than 660 studied by J. Gillis (see PA, Vol 39:6001) in 1961. Correspondingly, current Ss perceived their college environment to exert less press for intellectualism and dependency. However, in apparent conflict with their needs, present day Ss perceived their environment as demanding less impulse expression. Some comparisons indicated that teacher-education students have become somewhat more like the general student population in terms of needs and press.—*Journal abstract*.

(U Illinois, Coll of Education, Chicago Circle) Increasing class appropriate behavior through feedback assisted teacher training. *Behavioral Engineering*, 1975(Fal), Vol 3(2), 43-52.—Compared 2 approaches to teacher training in which a component of classroom-based, individual feedback assistance was delivered contingently or noncontingently upon the teacher's performance. The feedback was facilitated by an electronic communications device

utilized by the instructor from an observation room. A class taught by each of 4 inner-city 6th-, 7th-, and 8th grade teachers was observed twice a week. Class behavior was coded by trained observers as appropriate, inappropriate, and "other" (no behavior specification given by the teacher). Two Ss received each treatment. Results indicate the training with instructional feedback contingent upon performance was more effective. Data also suggest that a dichotomy exists between the school-scheduled class-length-teaching-duration of a class and the actual delivered class-length-teaching-duration. In addition, the percentages of class behaviors were examined for all Ss in this dual manner by treatment. Data substantiate the superiority of training with classroom based contingent feedback from a teacher trainer. (25 ref)—*Journal abstract*.

13061. Rist, Ray C. (National Inst of Education, Washington, DC) Perceptions of institutional legitimacy in an urban Black school. *Humboldt Journal of Social Relations*, 1974(Spr-Sum), Vol 1(2), 135-139.—Attacks the "external social forces" explanation of failure to learn in schools. In the case reported, the institutionalized role of the principal as a cultural maximizer, through motivational engineering, does not represent an educational strategy but a political one dedicated to avoiding fundamental change. Instead of using students and parents as scapegoats for educational failure, educators are challenged to transform public schools into public places.—P. Babarik.

13072. Sockloff, Alan L. & Papacostas, Arthur C. (Temple U, Measurement & Research Ctr) **Uniformity of faculty attitude toward effective teaching in lecture/discussion courses.** *Journal of Educational Measurement*, 1975(Win), Vol 12(4), 281-293.—Compared faculty from various academic disciplines and professorial ranks on the basis of factor score estimates derived from their ratings of the relevance of items for describing effective teaching in lecture/discussion courses. Based on factor analyses of pooled within-group correlation matrices derived from relevance judgements about a set of teaching behavior items, a 4-factor oblique structure of faculty attitude toward effective teaching was obtained. Using factor score estimates as the dependent variables, a 6×4 multivariate analysis of variance and analyses of variance (ANOVAs) failed to reveal differences among academic disciplines and professorial ranks. Implications for the construction of faculty evaluation instruments are discussed.—*Journal abstract*.

13134. Domino, George. (Fordham U) **Let the punishment fit the crime: Teacher-student interactions.** *Journal of Educational Research*, 1975(Sep), Vol 69(1), 8-11.—Notes that a major current concern in higher education is the utilization of modes of instruction that differ from the traditional lecture or small seminar formats. Such modes of instruction have in the past been evaluated by utilizing a comparative model that seeks to assess whether one method is better than another. This paper argues that the interaction model, which seeks to determine what type of instruction is best for various types of students, is more appropriate. Four studies with a total of 232 college students on interaction effects between student characteristics and mode of presentation are outlined.—*Journal abstract.*

13165. Henderson, Ronald W.; Swanson, Rosemary & Zimmerman, Barry J. (U Arizona) **Training seriation responses in young children through televised modeling of hierarchically sequenced rule components.** *American Educational Research Journal*, 1975(Fal), Vol 12(4), 479-489.—Designed field research to test the efficacy of television programming strategies based on task analysis and social learning theory for teaching a complex conceptual behavior, seriation, to Papago Indian children. It is noted that the TV program Sesame Street has been effective in teaching associative learning skills but has not met its objectives relating to more complex cognitive skills. In the present study the effectiveness of an alternative programming approach was assessed. 41 Papago Indian 3-5 yr olds were randomly assigned to 2 conditions. Experimental Ss viewed videotapes depicting seriation concepts; control Ss viewed placebo tapes. Results show highly significant differences between groups. It is concluded that sequentially arranged instruction can be effective in teaching a complex conceptual behavior to preschool children in culturally different environments. 13183. Kernberg, Paulina F. & Ware, Lucile M. (Albert Einstein Coll of Medicine, Bronx Municipal Hosp Ctr, Yeshiva U) Understanding child development through group techniques and play. *Bulletin of the Menninger Clinic*, 1975(Sep), Vol 39(5), 409-419.—Discusses the details of sessions and the results of a workshop on empathy with children, designed as an application of the Tavistock model. The workshop served as a laboratory where the following individual differences were explored: coping mechanisms (including mechanisms of defense); aspects of socialization in different phases; and the crucial role of the teacher in a large group, as experienced by the participants in their workshop roles as "young students" under the consultant-teacher. A glimpse of what was necessary for empathic understanding of children was provided; i.e., to get in touch with the child within oneself. In the workshop climate, regressive phenomena could be expressed and the individual could risk a response. (15 ref)—J. Z. Elias.

13187. Knowles, Lyle. (Pepperdine U) The relationship between academic performance and the tutorial versus traditional teaching modes in evening classes. *Journal of Instructional Psychology*, 1975(Win), Vol 3(1), 23-25.—Compared the performance of 55 graduate students in a class using an integrated, tutorial mode of instruction with the performance of 42 graduate students in a segregated, traditional mode of instruction. All classes met 1 evening each week, and were conducted in the same way except for the teaching mode. A discriminant analysis was used to test for differences between groups on 10 background and performance variables. Although the traditional students showed an advantage in background and preparation areas, the tutorial students excelled in performance. This finding suggests that a quantitative course that is integrated with a nonquantitative course provides a dimension of verbal thinking that assists nonquantitative thinking students in the learning process.—*Journal abstract*.

13209. O'Sullivan, Maureen & Guilford, J. P. (U San Francisco) Six factors of behavioral cognition: Understanding other people. *Journal of Educational Measurement*, 1975(Win), Vol 12(4), 255-271.—It has been suggested that training in working with people as well as with ideas has been difficult, however. Although the idea of social intelligence has a long history, most tests which have been proposed to measure such ability correlate highly with tests of verbal aptitude. The present study describes 6 factors of "social intelligence" suggested by Guilford's "structure of intellect" model. These social intelligence factors are defined by 23 tests using photographs, cartoons and other drawn materials, and tape-recorded sounds. The 6 behavioral-cognition factors are shown to be distinct from factors defined by 24 tests of verbal aptitude, spatial ability, and creative thinking. The 18 reference and experimental factors hypothesized and demonstrated are described and discussed. To date no similar factors, reflecting the abilities involved in understanding the feelings and intentions of others, have been reported. (39 ref)—*Journal abstract*.

(East Texas State U) Peripheral vision training in reading speed and comprehension. *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 761-762. —An experimental and a control group of 8 college students each received 15.75 hrs of speed reading training. The experimental group was given an additional 2.25 hrs of peripheral vision training. Peripheral vision increased for both groups, but reading speed improved only in the additionally trained group. Reading comprehension scores were not affected. —*Journal abstract*.

13231. Salfinger, Helmut. [Instituting group dynamics in the English class of a secondary school.] (Germ) *Gruppendynamik (Forschung und Praxis)*, 1974(Dec), Vol 5(6), 447-453. —Describes the innovative use in 1973-1974 of group dynamics with 30 10th grade students 15-17 yrs old. It was felt that in learning a foreign language, communicative exercises provide opportunity for applying learned material, for student conversations among themselves, for motivating them to consider English as a learning challenge, and for helping minimize their resistance to learning. The method consisted of requesting 7 or 8 students to form a round table group and conduct a general conversation for 10 min, with the teacher and other students as listeners and observers. Many lessons also began with partnered discussions, each student talking with the one next to him on various subjects. The method appears successful. A group session as judged by the students is described. —M. J. Stanford.

13283. Champlin, Stephen M. & Karoly, Paul. (U Cincinnati) **Role of contract negotiation in self-management of study time: A preliminary investigation.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 724-726. Experimental findings with 12 undergraduates are presented supporting the active role of the client in the establishment of contract conditions which facilitate self-control of study behavior. The need for a replication with a larger sample is suggested.

13284. Chan, Kenyon S. (U California, Los Angeles) **Social and psychological factors related to academic performance: A comparison of children from different socioeconomic and racial groups.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1525-1526.

13285. Cutrona, Michael P. (Fordham U) **The relationship between working class mother attitudes toward education and the educational achievement of their children with regard to sex, race and residence.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1494.

13286. de Nike, Lee. (Kent State U) **An exploratory study of cognitive style as a predictor of learning from simulation games.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5797-5798.

13287. Dill, John R.; Bradford, Corine & Grossett, Marjorie. (City Coll, City U New York) **Comparative indices of school achievement by Black children from different preschool programs.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 871-877. Categorized 728 Black 1st, 2nd, and 3rd graders according to their preschool experience (developmental day care, custodial day care, Head Start, and none). Ss' school records were used to obtain 4 indices of school achievement: demographic family variables, class ranking and attendance, personal-social behavior ratings, and academic achievement. Analyses showed Ss from developmental day-care programs were more likely to be born in the North, were enrolled in higher ranked classes, and had higher levels of reading performance. Results suggest that the type of preschool program an urban child attends can influence his early school achievement. Also, it is important to include additional dimensions of achievement for these children.—*Journal abstract.*

13292. Gagne, Eve E. & Parshall, Helen. (State U New York, Binghamton) **The effects of locus of control and goal setting on persistence at a learning task.** *Child Study Journal*, 1975, Vol 5(4), 193-199.—Used the Academic Achievement Accountability questionnaire to identify 20 internal- and 20 external-locus-of-control male 6th graders from a sample of 96 rural low socioeconomic status males. As expected, internals showed greater persistence than externals at learning digit spans. Although goal setting statements increased the persistence of males at the learning task, the persistence of externals was not significantly affected. A lack of persistence may be one of the factors involved in the generally low achievement of externals, but goal statements, of the type used in this investigation, may not be an appropriate intervention for this group. Goal setting procedures may be valuable in increasing the persistence of internals at difficult or tiring tasks. (24 ref)—*Journal abstract.*

13300. Hartlage, Lawrence C. (Medical Coll of Georgia, Augusta) **Differential age correlates of reading ability.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 968-970. Administered the Wide Range Achievement Test to 130 middle-class 1st, 2nd, and 3rd graders, testing them on 5 component reading skills. Results correlated moderately with both teachers' ranking and objective reading test scores at each age. Greater involvement of

auditory-sequencing skills was found in younger than in older readers, with visual-sequencing skills apparently being of importance in reading at all 3 ages. Visual and auditory space performance, although significantly correlated with reading at all age levels, tended to diminish in importance in later ages.—*Journal abstract.*

(U Stockholm, Psychological Lab, Sweden) Strategies for solving simple addition problems: A comparison of normal and subnormal children. *Scandinavian Journal of Psychology*, 1975, Vol 16(2), 143-148.—13 normal 3rd graders and 13 poor in mathematics attending special classes solved all additions with the sum of the 2 positive addends smaller than 10. The cognitive processes leading to the solutions are described in relation to a process model predicting solution times. The general model included a counter with 2 operations, setting and incrementing by 1 unit. It is assumed that solutions are obtained either by direct retrieval from memory or by a reconstructive process. The 1st step in this process is finding the starting point for the counter which is the greatest addend. When the problem has been defined and the starting point found, the generation of the answers starts by the counter stepping the number of units denoted by the smaller addend. Results based mainly on latencies show that Ss poor in mathematics, in addition to a slower processing

rate, seemed to have difficulties in the choice of strategy for processing the information in a problem.—*Journal abstract*.

13361. Barry, Gerald C. (Utah State U) Teacher open-mindedness as a predictor of student creativity progress. *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7577-7578.

13362. Bausell, R. Barker; Schwartz, Stanley & Purohit, Anal. (U Delaware, Coll of Education) An examination of the conditions under which various student rating parameters replicate across time. *Journal of Educational Measurement*, 1975(Win), Vol 12(4), 273-280.—Performed item correlations between student ratings of instruction in (a) the same courses taught during different semesters by the same instructors, (b) different courses taught by the same instructors, (c) the same courses taught by different instructors, (d) different courses within the same academic department taught by different instructors, and (e) different courses in different departments taught by different instructors. The 5 analyses were clearly differentiated in the above order by both number and size of significant correlations. Detailed examination clearly indicates that student ratings are consistent across time, but that this consistency is related to specific educational settings and conditions as well as to instructor idiosyncracies.—*Journal abstract*.

13363. Blake, Gerald F. (U Oregon) School dropouts: A study of the antecedents and consequences of dropping out of high school. *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7881-7882.

13364. Boak R. Terrance & Conklin, Rodney C. (Memorial U of Newfoundland, St John's, Canada) The effect of teachers' levels of interpersonal skills on junior high school students' achievement and anxiety. *American Educational Research Journal*, 1975(Fal), Vol 12(4), 537-549.—Conducted a study with 10 mathematics teachers and 20 language arts teachers to explore the effects of level of teacher interpersonal skills upon student outcome. One class taught by each teacher participated. It was hypothesized that students of teachers having a high level of skills (as measured by audiotaped classroom interactions and by teachers' written responses to students' written statements of common concerns) would obtain significantly higher achievement scores (as measured by the Canadian Test of Basic Skills for reading and vocabulary and the Tests of Achievement in Basic Skills: Mathematics) and lower anxiety scores (as measured by the High School Anxiety Questionnaire) than students of teachers with low levels of interpersonal skills. Results support the hypothesis only for mathematics and 8th-grade language arts.—P. O'Brien.

13368. Buchinger, Kurt. (U Vienna, Austria) [The meaning of play in the school.] (Germ) *Gruppendynamik (Forschung und Praxis)*, 1974(Dec), Vol 5(6), 434-441.
—For the child, school lies between the world of play and the seriousness of adult life and is conditioned by both. The child adapts to the world through the magic of play. In the play of children the subjective aspects of life are dominant. Although it is the adult who must fully master the objective aspects, the child must at some time begin to learn such mastery. The application of these ideas in the school setting is discussed. Practical suggestions are made which require teachers with training in psychology and group dynamics.—M. J. Stanford.

13382. Erlick, Arline C. & LeBold, William K. (Purdue U, Measurement & Research Ctr) Factors influencing the science career plans of high school students. *Purdue Opinion Panel Poll Report*, 1975(Jun), No 101, 66 p.
—Studied high school students' career plans in an attempt to determine reasons why science careers are or are not being pursued. Questionnaires were completed by 2,000 Grade 10, 11, and 12 students from public and private schools: the sample was stratified to match the 1970 United States census with respect to sex, grade, residence (rural/urban) and geographic region. Most respondents had been exposed to science through school courses and expressed favorable attitudes to such courses as well as to science and technology in general. Half of all students surveyed had considered pursuing careers in science, mathematics, or engineering, but only 5% of the total sample indicated a firm intention to become scientists. However, it is concluded that the expected proportion of future scientists may be underrepresented by the 5% figure due to possible confusion over the definition of a scientist. Although more males than females showed a preference for careers in science, respondents were almost unanimous in believing that females are equal to males in scientific and mathematical ability, and are equally fitted for science careers. 13421. Montgomery, James R. et al. (Virginia Polytechnic Inst & State U) The impact of different residence hall environments upon student attitudes. *College Student Personnel*, 1975(Sep), Vol 16(8), 389-394. Administered a questionnaire on autonomy (items taken from the Personality Research Form), satisfaction with residence hall life, roommate compatibility, reasons for living in a residence hall, and preferred housing arrangements to 1,868 undergraduates in the fall and spring (1972-1973). 1,358 Ss responded to both questionnaires. Another group of 679 Ss were surveyed about the type of residence hall they preferred (open door, closed door, or limited visitation). Results show that (a) freshmen, in their 1st 6-7 mo in a residence hall, developed attitudes similar to those held by upperclassmen; (b) Ss tended to become less satisfied with residence hall life over the school year; (c) factors that tended to bring students back to residence halls included economic benefits, convenience, and for women, an opportunity for social interaction; and (d) upperclassmen appeared to make their own self-selection into different living styles, while freshmen had this decision made for them; freshmen also viewed residence halls as more essential to their social-educational lives than did upperclass Ss.—*L. Gorsey*.
13422. Norwood, Elizabeth R. (W Virginia U) Effects of open and traditional education on curriculum, social environment, and behavioral interaction of students and teachers in third grade classrooms. *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 6879.
13423. Pambookian, Hagop S. (Marquette U, School of Education) Discrepancy between instructor and student evaluations of instruction: Effect on instructor. *Instructional Science*, 1976(Jan), Vol 5(1), 63-75.—Administered the Student Opinion Questionnaire (SOQ) to 13 college instructors and their students ($N = 231-252$) twice to determine whether a discrepancy between the instructor's and the student's evaluations of teaching influence teaching. The SOQ was given on the 4th wk of a term and 8 wks after feedback sessions with the instructors. Instructors received feedback on the direction and amount of initial discrepancy. Results show that the unfavorable discrepant instructors (instructor rating better than students) changed more on skill, feedback, rapport, general teaching ability, and the overall value of the course than the favorably discrepant instructors (student ratings better than instructor). The unfavorably discrepant instructors improved their teaching significantly more than the favorably discrepant instructors. (31 ref)—*Journal abstract*.
13424. Pascarella, Ernest T. (Syracuse U) A factor analytic comparison of faculty and students' perceptions of students. *Journal of Experimental Education*, 1975(Fal), Vol 44(1), 26-32.—To compare the factorial dimensions along which faculty judge students and students judge their peers, random samples of ($n = 306$) and ($n = 410$) from 2 colleges of arts and sciences rated

the concept "senior students in the college of arts and sciences" on a 26-item semantic differential. Principal components analysis with varimax rotation of data from the 229 student and 157 faculty respondents yielded 5 faculty and 6 student factors. A matrix of intercorrelations was computed between factors to determine the degree of similarity between the 2 factor structures. Despite a substantial degree of overall congruence in factor structures, faculty generally associated "value" in senior students with intellectual traits while seniors associated "value" with interpersonal sensitivity. 13427. Ramanaiah, Nerella V.; Ribich, Fred D. & Schmeck, Ronald R. (Southern Illinois U) **Internal external control of reinforcement as a determinant of study habits and academic attitudes.** *Journal of Research in Personality*, 1975(Dec), Vol 9(4), 375-384.—Tested J. B. Rotter's (1966) hypothesis that internals would show more achievement-striving behaviors than externals using a direct measure of such behavior. Rotter's Internal-External (I-E) scale and the Survey of Study Habits and Attitudes (SSHA) were administered to 123 male and 130 female undergraduates. Significant sex differences were found on the SSHA scales but not on the I-E scale. Results indicate significant differences between internals and externals within each sex in terms of the average SSHA profiles and the individual SSHA scales. Using H. L. Mirels' (see PA, Vol 44:10386) I-E subscales, similar results were obtained with the personal-control but not the political-control scale. Results support the multidimensional interpretation of the I-E scale. (16 ref)—*Journal abstract.*

13432. Scala, Klaus. [An experiment in group dynamics with students.] (Germ) *Gruppendynamik (Forschung und Praxis)*, 1974(Dec), Vol 5(6), 402-410.—Points out that in the current dissatisfaction with the educational process and with its results, as measured by

the abilities of school graduates, the teacher is often made the scapegoat. Three teaching styles or systems are described, none of which is satisfactory, since each of them emphasizes the teacher's difficulties. A substitute is proposed which is based on group dynamics and whose goals are to promote (a) learning as experience and the growth of the students' own interests, (b) social education, and (c) the development of political consciousness. In 1974 an experiment to test this use of group dynamics was conducted, consisting of a 1-wk seminar for teachers and 2 weekend seminars with 31 students. Results indicate that group dynamics sessions with teachers and students held for so few sessions cannot create significant changes.—*M. J. Stanford.*

13439. Stejskal, Renate. [Are there innovations in the elementary schools?] (Germ) *Gruppendynamik (Forschung und Praxis)*, 1974(Dec), Vol 5(6), 441-447.—Discusses the need for reform in the elementary school, particularly the methods of creating social consciousness in children. The school must also create an emotional basis to further child development. When he first enters school the child experiences separation from home and learns that the teacher's time must be shared with others. The new situations create in children an increased need for communication which the teacher must satisfy, while at the same time imparting knowledge. He should utilize their readiness to communicate by giving them an outlet for group communication such as discussing their experiences. In this process the teacher's personality and teaching style are also important factors.—*M. J. Stanford.*

Ss were 405 graduate students. Results of canonical correlation analysis show congruence between needs and ratings. (18 ref)
13447. **Toupin, Elizabeth A. & Luria, Zella.** (Tufts U, Office of the Dean of Students) **Coed housing: A conflict for Black parents?** *College Student Personnel*, 1975(Sep), Vol 16(5), 395-399.—Data on dormitory choices (coed vs unisex) by 1,275 White male, 110 Black male, 996 White female, and 101 Black female undergraduates in the classes of 1974, 1976, and 1977 at a large, private, eastern university show that Black females chose unisex housing more than 2 to 1 over coed housing in contrast to the 3 other groups. It is argued that Black women students, and especially their parents, do not perceive coed dorms as likely to give them equal ground for meeting eligible Black men. Apparent motivations for these choices by both White and Black students and their parents are examined.—*L. Gorsey.*

13454. **Wimmer, Rudolf.** (U Vienna, Austria) **[Group dynamics and political education: Requirements for a meaningful synthesis.]** (Germ) *Gruppendynamik (Forschung und Praxis)*, 1974(Dec), Vol 5(6), 420-434.—Based on many years of experience with the political education of students and teachers in Austria, experiments were conducted with volunteer students 16-18 yrs old in a political training program which involved seminars of 8-10 days over a period of 6-8 wks. A different theme was chosen for each seminar. The students approached the topics with a mixture of emotional and rational-analytic attitudes. No great changes were expected because the seminars were brief and the situations were difficult. The most decisive change occurred in the communication within classes. It is felt that group dynamics is necessary but not sufficient for the development of political consciousness. Recognizing that political education should start not with the students but with the structure of the school, seminars for further training of teachers of political education were developed.—*M. J. Stanford.*
13455. **Woolfolk, Anita E. & Woolfolk, Robert L.** (Rutgers State U) **Student self-disclosure in response to teacher verbal and nonverbal behavior.** *Journal of Experimental Education*, 1975(Fal), Vol 44(1), 36-40.—Assigned 80 4th graders to 1 of 4 experimental conditions such that each condition contained 10 high and 10 low self-esteem Ss (Piers-Harris Self-Concept Scale). Each group participated in a 25-min vocabulary lesson in which the students were evaluated 8 times by the teacher of the lesson. Teacher positive regard (defined as favorableness of the teacher's verbal and nonverbal evaluative communications to the students) was varied across the 4 conditions. Following the treatments a questionnaire was used to assess the students' willingness to self-disclose to the teacher. Data indicate that teacher positive regard was related to student willingness to self-disclose for male but not for female Ss. Congruence between verbal and nonverbal behaviors was not related to student willingness to self-disclose.—*Journal abstract.*
13456. **Yoakley, David H.** (Pensacola Junior Coll) **A study of student participation in classroom management to effect an increase in appropriate behavior.** *Journal of Educational Research*, 1975(Sep), Vol 69(1), 31-35.—Research has indicated that students develop a high degree of interest in their studies under such classroom management techniques as behavioral contracting, contingency management, and participation in classroom management. The latter technique was chosen, and an experiment designed to determine whether or not the behavior of 50 junior college students would be influenced by the opportunity to participate in classroom

management. The measure of influence was the rate of appropriate behavior in the classroom (paying attention, responding, asking questions). A quasi-experimental nonequivalent control group design was used. Pretest data indicated that experimental and control groups were not significantly different. Experimental Ss showed an increase of 16% in appropriate behavior after the treatment, and the Mann-Whitney U test indicated that the increase was significant. The technique is recommended for immediate usage and further experimentation.—*Journal abstract.*

13469. de Quiros, Julio B. (U of the Museum, Buenos Aires, Argentina) **Diagnosis of vestibular disorders in the learning disabled.** *Journal of Learning Disabilities*, 1976 (Jan), Vol 9(1), 39-47.—It is noted that children with vestibular disorders and related postural disturbances constitute a large segment of the learning disabled population. It is suggested that early identification of vestibular disorders could alert physicians, parents, clinicians, and educators to the need for modifications in the child's learning environment. Appropriate modifications could help to negate the influence of postural disturbances on the development of efficient functional systems. It is posited that a careful neurolabyrinthine examination including assessment of vestibular-proprioceptive mechanisms, using caloric and turning tests, can provide data which permit a diagnosis of vestibular-proprioceptive disintegration. Three diagnostic criteria are presented and discussed. (2/ p ref)—*Journal abstract.*

13478. Hallenbeck, Phyllis N. (Hallenbeck Psycho-Educational Ctr, Willoughby, OH) Remediating with comic strips. *Journal of Learning Disabilities*, 1976(Jan), Vol 9(1), 11-15.—Presents ideas for the use of comic strips in remediation work with learning disabled (LD) children. It is stated that comics are especially good for developing conceptual or logical abilities (e.g., sequencing, abstract thinking, and class inclusion). They are excellent for dyslexic children to teach left-to-right progression, discrimination of important details, and to give practice in reading. It is suggested that guided work with comics may help the child distinguish fantasy from reality and to express himself verbally in a clearer manner. The LD child is further benefited in his comprehension of social situations, the development of his sense of humor, and in the acquisition of an enjoyable leisure time activity.—*Journal abstract*.

13510. Thrapp, Robert W. Improvement of cognitive functioning in the trainable mentally retarded through visual-motor tutoring. *Child Study Journal*, 1975, Vol 5(4), 211-220.—Gave to 8 trainable mentally retarded public school children (CA 7-17 yrs) 27 individual, 3-dimensional, visual-motor tutoring experiences based on certain psychological correlates of the communications process and their inability to perform specific tasks required on the Leiter International Performance Scale. Eight children matched for CA and Leiter IQ served as controls and received 27 individual art and craft experiences. Pre- and posttest consisted of the Leiter and the Hiskey-Nebraska Test of Learning Aptitude. On the posttest the experimental group made significant gains in Leiter IQ and Hiskey MA, when compared to their pretest scores, while the control group did not make similar gains. Similarly, the experimental group made significant gains over the control group on posttest Leiter IQ. There had been no significant difference between the 2 groups on their Leiter or Hiskey. (17 ref)—*Journal abstract*.

Counseling & Measurement

13518. Ahmed, Farrukh Z. (U Karachi, Pakistan) **Can EPSAT predict academic success in engineering colleges in Pakistan?** *Pakistan Journal of Psychology*, 1975(Jun), Vol 8(1-2), 47-54.—Tested the validity of the Engineering and Physical Science Aptitude Test with a Pakistani sample consisting of 550 engineering graduates and 300 liberal arts graduates. Their total grades were used as the validation basis. Performance on the test was converted into percentiles using American norms. A chi-square analysis performed on the grades and the percentiles showed a significant difference ($p < .01$). It is concluded that the American norms are usable for Pakistani engineering and liberal arts students with a certain degree of validity. (18 ref)—M. Akhtar.

13519. Antoch, Robert F. (U Düsseldorf, Erziehungs-wissenschaftliches Inst, W Germany) **[The KSE—a promise kept?]** (Germ) *Psychologie in Erziehung und Unterricht*, 1974, Vol 21(6), 345-354.—Analyzes 2 of 6 sections of the Konstanzer Fragebogen für Schul- und Erziehungseinstellungen (KSE), a questionnaire measuring attitudes to school and education. To require a choice of either extensive general knowledge or specialization is seen as inappropriate and not unidimensional, and to require a decision between innate or environmental determination oversimplifies the issue. The practical usefulness of the KSE is considered still in doubt. (English summary)—W. O. Horn.

13520. Ashmore, Robert J. (U Maryland) **The employment of an auditory perceptual technique to increase ability to predict reading success in young children.**

Dissertation Abstracts International, 1974(May), Vol 34(11-A), 6855-6856.

13521. Bailey, James S. (Oklahoma State U) **The effects of marathon group counseling on selected self-concept factors of future teachers.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5614.

13522. Bailey, Sara J. (U Florida) **Effects of a classroom simulation on selected career decision-making variables with ninth-grade students.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 6968.

13523. Baird, Leonard L. (Educational Testing Service, Princeton, NJ) **Comparative prediction of first year graduate and professional school grades in six fields.** *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 941-946.—Administered a survey questionnaire to 7,734 college seniors to compare the validity of predictors of academic performance in 3 liberal arts areas and 3 professional areas: arts and humanities, biological and physical science, social science, law, medicine, and business. The predictors included information about Ss' backgrounds, self-conceptions, values, nonacademic achievements, and curricular patterns as well as admissions test scores and grades. In most fields, grades were predicted by academic ability and by prior achievement, self-confidence, and previous accomplishment in the field. Background variables predicted grades only in law and arts and humanities. The predictive power of admissions tests varied from field to field.—Journal abstract.

13524. Baker, Homer O. (Arizona State U) **An algorithm for computerized readability.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 6857.

13525. Barker, Marie E. (New Mexico State U) **The Purdue Perceptual-Motor Survey: The Spanish edition, development and standardization.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5614-5615.

13526. Bean, Andrew. (Temple U) **The prediction of performance in an educational psychology Master's degree program.** *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 963-967.—Examined the predictive validity of the Graduate Record Examinations Aptitude Test, Verbal, and Quantitative scores (GREV and GREQ) and undergraduate GPA (UGPA). Criterion variables consisted of graduate GPA (GGPA), the Master's Comprehensive Examination scores (MCE), and grades in individual required courses for 91 graduate students. GREV correlated .31 with GGPA but failed to correlate significantly with any other criterion. GREQ correlated .45 and .59 with grades in 2 research methods courses but failed to correlate with any other criterion. UGPA was not significantly related to any of the criteria. These somewhat atypical findings stress the need for local validation of graduate admissions measures.—Journal abstract.

13527. Belcastro, Frank P. (Merrimack Coll) **Use of selected factors as predictors of success in completing a secondary teacher preparation program.** *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 957-962.—Performed a multiple regression analysis on all EPPS and SVIB scales to determine those scales which could be used to predict success in a secondary teacher preparation program for 207 female and 88 male graduating college seniors. Significant discriminant

function equations for 14 male predictor variables and for 8 female predictor variables were obtained. Thus, for both males and females it was possible to discriminate between those who had completed the teacher preparation program and those who had not; for applicants it was possible to classify them as likely or unlikely to complete the teacher preparation program. Cross-validation studies, however, with larger samples would be needed to establish generalizable equations that would permit realization of a comparatively high degree of accuracy of classification of applicant members in new samples.—*Journal abstract.*

13528. Bennett, Susan M. (U Hawaii) **Prediction of cognitive and divergent-productive intellectual abilities of Filipino sixth grade students from characteristics of their home environments.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5704-5705.

13529. Blakely, Wilbur W. (Temple U) **Relaxation as a mechanism of change in counseling: Specific input effects on self reports in time-limited, individual counseling.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1441.

13530. Bose, K. (Central Inst of Education, New Delhi, India) **Guidance services for the talented.** *Journal of Vocational & Educational Guidance*, 1974(Jun-Dec), Vol 16(1-2), 53-57.—Urges that more attention be given to guidance services and resources for the gifted. The gifted are dichotomized into 2 groups: (a) the intellectually superior (academically talented), and (b) the societal leaders (mobilizers of leadership force). Discussion focuses on 3 basic needs of gifted pupils: (a) self-understanding and acceptance, also called self-actualization; (b) satisfaction in the quest for further information and knowledge; and (c) choice of appropriate educational and occupational opportunities. A nondirective approach to counseling the gifted and a "planning together" approach involving parents are suggested.—*F. P. Stetz.*

13531. Bouchard, Michael C. (U of the Pacific) **The impact of the Introductory Year Program at the College of the Pacific on students' intellectual orientation.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 6993.

13532. Brooks, Ernest T. (Ohio State U) **The relationship between non-intellectual variables and college performance of Black college freshmen.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 6860.

13533. Brown, Rebecca J. (U Mississippi) **The validity of psycholinguistic configurations as predictors of reading achievement.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1348.

13534. Brunza, John J. (Indiana U) **The effects of repeated probabilistic testing conditions on state anxiety and test reliability.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5706.

13535. Butterworth, Thomas W. & Michael, William B. (Los Angeles County Schools, CA) **The relationship of reading achievement, school attitude, and self-responsibility behaviors of sixth-grade pupils to comparative and individualized reporting systems: Implications for improvement of validity of the evaluation of pupil progress.** *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 987-991.—Two samples of

300 6th graders each received information furnished by 2 different systems of reporting pupil progress: (a) one involving use of traditional A-F letter grades and (b) the other embracing a highly individualized procedure of detailed narrative statements providing feedback on performance. A quasi-experimental design (reporting system \times IQ \times sex) was employed with dependent variables including measures of reading achievement, school attitude, and self-responsibility for intellectual attainments. Results from 3 analyses of variance revealed significant main effects for each dependent variable favoring the individualized reporting system, high-ability over low-ability Ss, and females over males. In the measure of intellectual self-responsibility a significant Ability Level \times Mode of Reporting interaction occurred which suggests that an individualized reporting system would yield differential outcomes indicating a higher average level of intellectual self-responsibility for children of low ability but no appreciable difference in average level of self-responsibility for children of high ability. Implications for improving the validity of evaluating pupil progress are discussed.—*Journal abstract.*

13536. Carr, James V. (Boston Coll) **The use of the Gesell Developmental Examination to identify children prone to emotional maladjustment and visual motor problems.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1524-1525.

13537. Carroll, Halcyon H. (U New Mexico) **A comparison of how students and counselors view the real and ideal functioning of high school counselors.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 6969-6970.

13539. Charlton, Robert E. (Utah State U) **The effects of mobile assisted career exploration on the career development of rural ninth grade students.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7533.

13540. Conyne, Robert K. & Clack, R. James. (Illinois State U, Student Counseling Service) **The consultation intervention model: Directions for action.** *College Student Personnel*, 1975(Sep), Vol 16(5), 413-417.—Describes a 3-dimensional consultation intervention model to illustrate the potential for broad-based counselor impact within a university campus community. Based upon community mental health principles, consultation is described as a complex but efficient function whereby counselors may maximize the scope of their interventions.

13541. Covert, Robert W. & Chansky, Norman M. (U Virginia) **The moderator effect of undergraduate grade point average on the prediction of success in graduate education.** *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 947-950.—183 female and 123 male Masters of Education students were divided into 6 subgroups according to sex and to each of 3 levels of undergraduate GPA. Correlation coefficients between graduate GPA and each of 3 predictor variables, consisting of Graduate Record Examinations—Verbal

- score, Graduate Record Examination—Quantitative score, and undergraduate GPA, were calculated for each of the 6 subgroups. Results show differential predictability across the different subgroups.—*Journal abstract.*
13542. Crehan, Kevin D. (State U New York, Buffalo) **Item analysis for teacher-made mastery tests.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5708-5709.
13543. Cross, Lawrence H. (U Pennsylvania) **An investigation of a scoring procedure designed to eliminate score variance due to guessing in multiple-choice tests.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7463.
13544. Czapár, József. (Tanárképző Főiskola, Subotica, Yugoslavia) **[A method of attitude examination in schools.]** (Hung) *Magyar Pszichológiai Szemle*, 1974, Vol 31(2), 227-237.—Describes the construction and verification of a 25-item Likert-type scale for measuring student attitudes toward school. The scale provides a composite score for attitudes based on 5 independent subscales: (a) the school as a social institution, (b) the school as a source of success and failure, (c) pupil-teacher relationships, (d) social and friendly relations, and (e) school requirements. 265 students of both sexes, 10-14 yrs old, were tested and the results analyzed. It was found that the scale could be used only from Grade 6 up. (Russian & English summaries) (23 ref)—*F. Mester.*
13545. Dantzler, Dolores J. (W Virginia U) **The attitudes of Blacks toward stories in selected basal readers which contain Negro characters.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 6865.
13546. Devine, Christopher P. (Auburn U) **Audio-taped and live presentation of an abbreviated form of systematic desensitization to reduce test anxiety.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1442.
13547. Dinger, Mary A. (U Virginia) **Effectiveness of individual counseling using reinforcement techniques in raising the grade point averages of underachieving eleventh-grade students in the five high schools of Augusta County, Virginia.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5623.
13548. Dodson, Elizabeth A. (Michigan State U) **The effects of female role models on occupational exploration and attitudes of adolescents.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7535.
13549. Dutt, N. K. (Central Inst of Education, New Delhi, India) **Counseling the emotionally disturbed: A viewpoint.** *Journal of Vocational & Educational Guidance*, 1974(Jun-Dec), Vol 16(1-2), 85-89.—Discusses the characteristics of the emotionally disturbed and describes the counseling process for such persons. Limitations of present counseling situations are outlined: (a) the inadequacy of strict methodologies and techniques; (b) the absence of personal influence and example; and (c) the inadequacy of objective techniques. A proposal is made for a form of counseling which would be based in part on the humanistic behavior of the counselor. It is stressed that counselors for the emotionally disturbed should avoid the tendency to act as psychologists (by basing their counseling on tenets of psychological analysis).—*F. P. Stetz.*
13550. Eapen, P. C. (Regional Coll of Education, Mysore, India) **Self concept of the culturally deprived and its implication for their education and guidance.** *Journal of Vocational & Educational Guidance*, 1974(Jun-Dec), Vol 16(1-2), 30-32.—Discusses the relationship between a culturally deprived environment and negative social self-perception by the individuals. Difficulties arise in identifying and understanding the culturally deprived child and in finding adequate ways in which he can be educated to become a productive member of society. A definition of self-concept is given which stresses the social processes important in the development of a positive self-concept. Six problems are discussed which make adequate guidance programs for the culturally deprived difficult to attain.—*F. P. Stetz.*
13551. Erickson, Maynard L. & Smith, Walton B. (U Arizona) **On the relationship between self-reported and actual deviance: An empirical test.** *Humboldt Journal of Social Relations*, 1974(Spring-Summer), Vol 1(2), 106-113.—Investigated the relationship between deviancy rates, as determined from direct observation of actual behavior, and self-reports of the same behavior. 118 college students were given an opportunity to cheat by self-grading an examination. 43% of the Ss cheated (54% of the males and 35% of the females). Self-reports of cheating showed females less likely to admit deviance than males. No inflation of deviance was caused by self-reporting. No individual who did not cheat reported that he did, and the highest rates of self-reported cheating were among those who actually cheated most. (22 ref)—*P. Babarik.*
13552. Fine, Richard M. (Arizona State U) **The application of social reinforcement procedures to improve the school attendance of truant Chicano junior high school students.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1442-1443.

13559. Guerra, Richard D. (U Missouri, Columbia) **Measurement of occupational knowledge in adolescents.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 6975.
13560. Hahnloser, Rudolf M. (U Oregon) **A comparison of cognitive restructuring and progressive relaxation in test anxiety reduction.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1444-1445.
13561. Hakstian, A. Ralph & Kansup, Wanlop. (U British Columbia, Vancouver, Canada) **A comparison of several methods of assessing partial knowledge in multiple-choice tests: II. Testing procedures.** *Journal of Educational Measurement*, 1975(Win), Vol 12(4), 231-239.—Compared the reliability and validity of 3 testing procedures. 1,028 9th grade students were randomly divided into 3 groups: (a) responding conventionally to verbal ability and mathematical reasoning tests, (b) using a confidence-weighting response procedure with the same tests, and (c) using the elimination response method. Data on school achievement criteria were obtained and a similar ability measure was administered to assess criterion-related validity. Elimination test scores showed no increase over conventional scores in either internal consistency or stability, and no significant increase in validity. Confidence test scores showed, in some cases, significantly higher reliability than did conventional scores. However, the increase would be matched by conventional tests requiring equal testing time. The confidence scores yielded no increase in validity, and in some cases a decrease. It is concluded that the experimental testing procedures examined are not psychometrically superior to conventional testing. (17 ref)—*Journal abstract*.
13562. Hall, Harold B. (U Missouri, Columbia) **Assignment to residence halls by major: A test of Holland's Theory of Vocational Choice.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 6975.

13564. Hines, Ruthann F. (U North Carolina, Chapel Hill) **An investigation of self-actualization and helping experience in relation to provision of facilitative conditions in helping relationships.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5628-5629.
13565. Holmes, George R. et al. (William S. Hall Psychiatric Inst. Columbia, SC) **Multivariate prediction of third grade academic performance from de Hirsch Index score.** *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 735-739.—Conducted a 3-yr follow-up study with 42 3rd graders of the original 50 Ss who were tested as kindergartners by P. Adkins et al (see PA, Vol 48:3655) using the de Hirsch Predictive Reading Index. The present experiment used 5 dependent measures of academic performance, including the Gates-MacGinitie Reading Tests (Primary C and CS) and the Metropolitan Achievement Tests (Form B, Elementary Battery). Results indicate that this preliminary study of the de Hirsch method of classification of children as of potentially high academic risk clearly suggests the possibility of using discriminant function analysis with the de Hirsch Index. A strategy for evaluating interventions on high-risk children is suggested.—*Journal abstract*.
13566. Ingram, Fred J. (Oklahoma State U) **A study of selected nonintellectual variables among groups of students in a technical institute.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 7121.
13567. Jackson, Truman H. (U Illinois) **A study of characteristics of occupational students in selected area vocational center schools and comprehensive high schools in Illinois.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7650.
13568. Jacobs, Stanley S. & Shin, Se Ho. (American Coll, Bryn Mawr, PA) **Interrelationships among intelligence, product dimension of Guilford's model and multi-level measure of cognitive functioning.** *Psychological Reports*, 1975(Dec), Vol 37(3, Pt 1), 903-910.—Investigated the relationships, for 116 11th graders, among a conventional measure of intelligence, 6 measures of verbal creative behavior reflecting the product dimension of J. P. Guilford's structure of intellect model, and 6 measures of cognitive functioning, based on B. S. Bloom's taxonomy for the cognitive domain. Conventional intelligence was more highly associated with the 4 most basic levels of functioning, while creativity was more highly associated with the 2 higher levels. Further analyses indicated the independence of these 2 types of function and that 2 independent levels of creative behavior which are independent of intelligence are tapped by the 6 creativity measures.—*Journal abstract*.
13569. Janson, Margaret G. (Temple U) **A study of the degree to which academic achievement and social and emotional adjustment in grade one can be predicted from a pre-kindergarten screening device.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1446.
13570. Johnson, Constance H. (Southern Illinois U) **A comparative study of self help versus individual educational-vocational counseling for college students.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5633.
13571. Johnson, Richard W.; Kirk, Kenneth W. & Ohvall, Richard A. (U Wisconsin, Madison) **Predictive validity of SVIB Pharmacist scales.** *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 951-955.—Investigated the predictive validity of the old and new men's Pharmacist scales and the new women's Pharmacist scale on the SVIB for 279 male and 76 female pharmacy students. Each of the 3 scales significantly differentiated between graduates and nongraduates from the pharmacy program. Separate sex norms appeared to be necessary for the 2 men's scales but not for the new women's scale. The women's scale most accurately identified the pharmacy majors and produced

the highest correlations with the criterion for both sexes.

13572. **Kansup, Wanlop & Hakstian, A. Ralph.** (U Alberta, Edmonton, Canada) **A comparison of several methods of assessing partial knowledge in multiple-choice tests: I. Scoring procedures.** *Journal of Educational Measurement*, 1975(Win), Vol 12(4), 219-230.—Examined the effects of (a) logically weighting incorrect item options in conventional tests and (b) different scoring functions with confidence tests on reliability and validity. A group of 9th grade students took conventionally administered verbal and mathematical reasoning tests, scored conventionally and by a procedure assigning degree-of-correctness weights to incorrect alternatives. Some increase in internal consistency, but a slight decrease in stability, resulted from the weighting. Validity for school achievement criteria was not improved by the weighting, and in some cases significantly reduced. Another group took the same tests with confidence testing instructions. Five scoring functions, representing 4 underlying models, were compared. Slight, but nonsignificant, gains in internal consistency and stability were obtained for 2 functions. No substantial differences in validity were found. It is concluded that (a) logical weighting with conventional tests is likely to be unprofitable and (b) the simplest scoring function for confidence tests is as effective as more complex ones. (24 ref)—*Journal abstract.*

13579. **Lunneborg, Patricia W.** (U Washington, Seattle) **Interest differentiation in high school and vocational indecision in college.** *Journal of Vocational Behavior*, 1975(Dec), Vol 7(3), 297-303.—Defined a vocationally indecisive student as one who is both an upperclassman and without a major field of study and identified 395 Ss, from a total sample of 1,622 students in college for 3 yrs as being indecisive. Indecisive Ss were compared with the remainder of the sample, using

precollege measures of achievement, interest, and aptitude (the Washington Pre-College test battery and the Vocational Interest Inventory). Measures of interest differentiation were of particular concern. Indecisiveness was best predicted from present and past achievement measures (e.g., cumulative college GPA or high school mathematics GPA). Interest predictors slightly augmented the multiple correlation, including Outdoor interest, Business Contact interest, and interest differentiation. Most important to vocational indecision in these juniors and seniors, however, was lower academic achievement.

13580. **Majors, Gene W. & Michael, Joan J.** (Anaheim Union High School District, CA) **The relationship of achievement on a teacher-made mathematics test of computational skills to two ways of recording answers and to two workspace arrangements.** *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 1005-1009.—The performance of 120 7th and 120 8th graders on a 30-item teacher-made test was related to (a) transcribing the item responses to numbered spaces in an answer column on a separate sheet vs writing the item response on the test form itself and (b) providing workspace on the test form itself vs not providing such space. Statistically significant differences were obtained with respect to both main effects ($p < .05$) for the 7th graders and with respect to the single main effect of Mode of Recording Item Response ($p < .001$) for the 8th graders. When the data were interrupted descriptively rather than inferentially there was the strong suggestion that recording answers directly on the examination form was associated with a higher average level of student performance. For the 9th graders provision of working space on the test form yielded higher average scores.—*Journal abstract.*

13581. **Malone, Charlotte E. & Moonan, William J.** (Western Behavioral Science Inst, La Jolla, CA) **Behavioral identification of gifted children.** *Gifted Child Quarterly*, 1975(Win), Vol 19(4), 301-306, 271.—Describes the use of biographical indices and the CHAROSEL computer program to identify disadvantaged minority primary children in an urban school for giftedness.—*J. C. Gowan.*

13583. **Manhas, Leela.** **Guidance programme for the underachievers.** *Journal of Vocational & Educational Guidance*, 1974(Jun-Dec), Vol 16(1-2), 33-38.—Urges establishment of the right kind of educational guidance and counseling for scholastically underachieving children, their parents, and even their teachers. Definitions are given for underachievement, educational guidance, and counseling. Cognitive, affective, and psychological factors which (a) influence school achievement and (b) probably cause underachievement are discussed. Recommendations are given for the teacher, counselor, school, university, and community in detecting and diagnosing scholastic underachievement and in planning remedial programs to minimize it.—*F. P. Stetzel.*

13584. **Many, Margaret A. & Many, Wesley A.** (Western Illinois U) **The relationship between self-**

- esteem and anxiety in grades four through eight. *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 1017-1021.—Examined the relationships between a measure of self-esteem and each of 2 measures of general anxiety and test anxiety in 4,367 4th-8th graders. The Self-Esteem Inventory, General Anxiety Scale for Children, and Test Anxiety Scale for Children were employed. There were statistically significant negative correlations between the measure of self-esteem and each of the measures of general anxiety and test anxiety when scores were analyzed by total group, grade level, and sex. Although these correlations tended to be low to moderate, they were consistent in suggesting a negative relationship between a measurable construct of self-esteem with each of the corresponding constructs of general and test anxiety. Implications tend to support the possibility of reducing anxiety in elementary and junior high school age pupils by enhancing the way in which they see themselves.—*Journal abstract*.
13585. Masendorf, Fritz & Roeder, Burkhard. (Pädagogische Hochschule Ruhr, Abteilung Heilpädagogik, Dortmund, W Germany) [Classification of students with learning deficiencies into types using configuration frequency analysis.] (Germ) *Psychologie in Erziehung und Unterricht*, 1974, Vol 21(6), 327-334.
13586. McDonald, John F. & McPherson, Michael S. (U Illinois, Chicago Circle) High school type, sex, and socio-economic factors as predictors of the academic achievement of university students. *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 929-933.—Administered a questionnaire to 152 university students and used these data to predict Ss' GPAs. It was shown that knowledge of high school type, sex, number of credit hours taken, and perhaps dollar value of scholarships and number of hours of outside work could significantly increase the ability to predict grades beyond that accomplished through using rank in high school class and American College Testing Program (ACT) Composite Score.—*Journal abstract*.
13587. McDonnell-Pietronuto, Catherine. (Yeshiva U) Attitude related to the perception of the ideal and real counselor. *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5637-5638.
13588. Mehta, Perin H. & Kumar, Usha A. Guidance in the context of universalisation of primary education and development of pre-school education. *Journal of Vocational & Educational Guidance*, 1974(Jun-Dec), Vol 16(1-2), 22-26. Discusses theories regarding the importance of parent, teacher, and counselor guidance in the cognitive, attitudinal, and social development of preprimary and primary children in India, especially 1st-generation learners. Eight objectives for guidance programs to help children actualize their potential are listed, 8 suggestions given for the classroom teacher, and 6 suggestions for teacher training and orientation toward the goal of universalization of primary education. Four recommendations summarize the present state of affairs and point to further work needed in the area.—F. P. Stetz.
13589. Mueller, Daniel J. & Schwedel, Allan. (Indiana U) Some correlates of net gain resultant from answer changing on objective achievement test items. *Journal of Educational Measurement*, 1975(Win), Vol 12(4), 251-254.—Examined correlates of net score change on objective achievement tests, resulting from changing initial answers. 80% of all students changed at least 1 answer, and net score gainers exceeded net score losers by a ratio of 4 to 1. No sex difference was found in net score change, although males changed more answers than did females. There was a clear tendency for high-scoring students to gain more points than low-scoring students. About 20% of the students who changed answers lowered their total scores. While some high-scoring students were in this group, most of those losing points were middle- and low-scoring students.—*Journal abstract*.

13607. Schmidt, Carl R.; Sabatino, David A. & Foster, Glen G. (Model Learning Disabilities Systems State Coll. PA) The predictive validity of the Test of Auditory Perception. *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 1023-1027.—84 2nd graders were administered the Lorge-Thorndike Test of Cognitive Abilities (LTTCa), the Test of Auditory Perception (TAP) and, 5 mo later, the Metropolitan Achievement Test (MAT). Pearson product moment correlations coefficients and an analysis using stepwise regression indicated that performance on the TAP subtests was significantly correlated with most MAT subtest scores, especially the phonically oriented MAT Word Analysis subtest. With the common TAP-LTTCa variance held constant, all correlation coefficients which had previously been statistically significant became nonsignificant except those between the TAP subtests and MAT Word Analysis subtest. It is concluded that performance in only those aspects of an academic program most directly related to auditory perception can be predicted using the TAP.—Journal abstract.

13610. Siddiqi, S. A. School services for emotionally disturbed. *Journal of Vocational & Educational Guidance*, 1974(Jun-Dec), Vol 16(1-2), 81-84.—Outlines factors to be considered in providing school guidance and counseling services for the emotionally disturbed. Functions which counseling services should perform include identification, prevention, treatment, and referral. Three questions are raised concerning guidance services for such individuals: (a) What types of clients should be included? (b) What types of emotional disturbances should be dealt with? (c) Where are these services needed most? Suggestions are given for the types of guidance services that should be provided from preschool through university levels.—F. P. Stetz.
13611. Silvernail, Jean M. (U Pittsburgh) The design and validation of an instrument for identifying and measuring the coping behaviors of three-year-olds in preschool settings. *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1487.
13612. Simpson, C. Kenneth & Boyle, David. (Cleveland State U) Esteem construct generality and academic performance. *Educational & Psychological Measurement*, 1975(Win), Vol 35(4), 897-904.—Measures of global, specific, and task-specific self-esteem (including the Tennessee Self-Concept Scale) were administered to 159 college students and related to predicted and actual performance on a midterm examination. Significant correlations were found between global and specific measures and between specific and task measures, but not between global and task measures. The relationship between the esteem measures and actual performance was strongest for the task measures, next strongest for the specific measures, and nonsignificant for the global measures. Specific measures were also significantly related to predicted performance, but global measures were not. Findings are discussed in terms of 4 criticisms of global measures, and it was suggested that more specific self-esteem measures be developed.—Journal abstract.
13613. Smith, Elsie J. (State U New York, Buffalo) An investigation of reference group perspectives,

- vocational maturity, and occupational attainment. *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5827.

13617. Towle, Nelson J. & Merrill, Paul F. (Florida State U) **Effects of anxiety type and item-difficulty sequencing on mathematics test performance.** *Journal of Educational Measurement*, 1975(Win), Vol 12(4), 241-249.—Investigated the effects of 3 item-difficulty sequenced forms of a timed 48-item mathematics test on overall test performance and anxiety arousal. 82 college Ss were classified into 4 anxiety types based on Achievement Anxiety Test Scores. Math scores for an easy-to-hard item sequence group were significantly higher than those of a hard-to-easy item sequence group. No anxiety type by sequence interaction was found. Difficulty sequence did not significantly affect anxiety arousal. Results of this study were relatively consistent with the inverted-U hypothesis proposed by D. C. Munz and A. D. Smouse (see PA, Vol 42:19276) to explain differential item-difficulty sequence effects on performance of different anxiety-types.—*Journal abstract*.

13640. Long, Gerald M. (Stanford U) Rod-and-frame test performance among Naval aviation personnel. *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 950. —Analyses of rod-and-frame test performances of 5 aviation groups showed that the 3 experienced pilot groups (US Navy flight officers) had significantly lower (i.e., superior) scores than 2 groups of Navy student pilots. Results are consistent with earlier findings in civilian airline pilots that experienced pilots are relatively field independent.

13641. Ochonisky, Jean. [Entering professional work.] (Fren) *Psychiatrie de l'Enfant*, 1974, Vol 17(2), 593-654.—Examines psychological and social aspects of entering professional work in terms of the processes of individuation and maturation. Phases discussed include the psychoanalytic view of the problem, the realities of training and employment, and the attitudes of youth toward working. Also considered are selection of occupation, work for the handicapped, and the psychopathology of work. Psychological intervention, its limits and its possible goals are discussed. (52 ref)—D. F. Herran.

13642. Sievers, Burkard. [Theories and methods of organizational development in the US.] (Germ) *Gruppendynamik: Forschung und Praxis*, 1975(Feb), Vol 6(1), 29-49.—Discusses several, but not all, of the important recent developments in organizational theory (among the topics omitted are management by objectives, job enrichment, action research, and sociotechnical systems).

Innovations examined include the managerial grid, survey-guided development, and the contingency approach. Their historical bases, strategies and interventions, and the consultant's role in organization are explored. The 6 phases of the managerial grid, which are designed to achieve high production and optimal interpersonal relationships, are considered in detail. In discussing survey-guided development, the role of extensive, well standardized research is emphasized. (4 p ref)—M. J. Stanford.

13643. Sollday, Stanley M. (Midwest Research Inst, Transportation Systems Group, Kansas City, MO) Development and preliminary testing of a driving hazard questionnaire. *Perceptual & Motor Skills*, 1975(Dec), Vol 41(3), 763-770.—Developed a 60-item questionnaire for automobile drivers. One- or 2-sentence descriptions of commonly encountered driving situations are rated by the respondent, on a 7-point scale, for danger of an accident. The questionnaire was given to 15 women and 15 men 30 or more yrs of age and to 15 women and 15 men under 30, all of whom were drivers. Results show that women rated the situations as being more hazardous than the men did and that the younger group rated them as being more hazardous than the older group did. Significant correlations between ratings and numbers of self-reported accidents and traffic violations were found. These showed that Ss having had no accidents or violations in the immediately preceding 5 yrs generally rated the driving situations as being more dangerous than those having had at least one during that time.—*Journal abstract*.

13648. Currie, Lawrence E. (Syracuse U) Vocational awareness, vocational development, and vocational responses in adolescents of divergent ethnic, educational, and socioeconomic backgrounds. *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 7119.

13649. Holland, John L. & Gottfredson, Gary D. (Johns Hopkins U, Ctr for Educational Research) Predictive value and psychological meaning of vocational aspirations. *Journal of Vocational Behavior*, 1975(Jun), Vol 6(3), 349-363. Examined the psychological meaning and predictive value of a person's vocational

aspirations by applying J. L. Holland's typology to the vocational aspirations of 1,005 high school juniors, 692 college juniors, 140 employed adults, and a 2nd sample of 624 college students studied over a 1-yr interval. The aspirational data were obtained from the Daydreams section of the Self-Directed Search. Categorical and correlational analyses showed that a person's retrospective vocational aspirations have coherence and yield efficient predictions of subsequently expressed choice. In addition, the degree of coherence or similarity among a person's vocational aspirations provides a potentially useful index of a person's decision-making ability. (33 ref)—*Journal abstract*.

13650. Kennedy, Mary J. (Catholic U of America) **The relationship of locus of control to career and homemaking vocational choices and resistance to change of high school girls.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1446-1447.

13651. McEwen, Marylu K. (Auburn U) **Counseling women: A review of the research.** *College Student Personnel*, 1975(Sep), Vol 16(5), 382-388.—Reviews the literature on counselor perceptions of male and female clients, sex bias in vocational counseling, career development programs for women, and concerns and characteristics of mature women. Suggestions and resources for counseling women and for designing programs that enhance career development in an unbiased manner are outlined. (2/p ref)

13652. Rastogi, K. G. (Central Inst of Education, New Delhi, India) **Guidance services for the unemployed.** *Journal of Vocational & Educational Guidance*, 1974(Jun-Dec), Vol 16(1-2), 92-96. Stresses the importance of occupational guidance in the development of goals, aspirations, values, and skills of the individual. Problems in providing occupational guidance and strategies for overcoming some of them are discussed.—F. P. Stetzel.

13653. Stone, Michael R. (U Maryland) **An exploratory multi-scalable survey of the determinants of college students' predisposition toward public service employment: Affective, cognitive and individual background components.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 7318-7319.

13654. Thakur, Surendra S. (U Wisconsin) **Determining the relationship of social and psychological variables to educational and occupational aspirations of rural youth in India.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5827-5828.

13655. Webster, Evelyn G. & Booth, Richard F. (U S Naval Health Research Ctr, San Diego, CA) **Success and failure among male and female Navy paramedical specialists.** *Journal of Community Psychology*, 1976(Jan), Vol 4(1), 81-88. A comparison of the sexes in U S Navy Hospital Corpsman (HM) and Dental Technician (DT) rating groups showed that men and women ($n = 2,747$ and 554, respectively) entering these paramedical specialties differed on a number of background, aptitude, and personality dimensions. The same proportion of men and women completed training in the HM group, but significantly more DT women completed training than did DT men. The proportion of men and women who were still in the Navy 1 yr after completion of training was the same in both rating groups. Among those who

failed to complete training, the women were more likely than the men to be in the Navy 1 yr later. Findings show that women were just as successful as men in both of these rating groups when success is defined as completion of training and remaining on active duty for a period of 1 yr after completion of training. Results are contrary to those of earlier Navy studies which showed higher discharge rates and lower reenlistment rates for women. It is suggested that the results may represent changes in values, roles, and expectations for the sexes, and changes in Navy policies for women.—*Journal abstract*.

Personnel Selection & Training

13656. Blevins, David E. (U Mississippi) **Claimed versus calculated cue-weighting systems for screening employee applicants.** *Journal of Vocational Behavior*, 1975(Dec), Vol 7(3), 327-336.—Administered the Occupational Values Questionnaire to 50 randomly selected accountancy majors. Four of each S's stated occupational values and his or her GPA were chosen to describe the S to 24 accountant-judges. The cue-weighting system which the assessors claimed they used was compared with the cue-weighting system one would infer they used based on multiple observations of their assessing behavior. The claimed cue-weighting systems agreed poorly with the empirically calculated cue-weighting systems for all assessors except one who utilized only 1 cue. Methodological and substantive implications in the area of perceptions of competent people are discussed. (21 ref)—*Journal abstract*.

Naval training.** *Educational Technology*, 1975(Jun), Vol 15(6), 28-32.—Describes the Naval Instructional Systems Model which is used for curriculum development at the U. S. Naval Amphibious School. The model has 4 components: need specification, analysis, synthesis, and implementation. The process of course construction and validation is described.—C. B. Kreitzberg.

13659. Garwood, John B. (U Waterloo, Canada) **The effects of intrinsic and extrinsic job characteristics, demographic and personality variables on organizational choice at different academic levels.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5237.

13660. Goeters, Klaus-Martin. [Psychodiagnostics in the service of developing countries: The selection of applicants from the Yemen Arab Republic for pilot training.] (Germ) *Zeitschrift für Experimentelle und Angewandte Psychologie*, 1975, Vol 22(2), 195-217.—43 applicants for pilot training with some knowledge of English were pretested with a variety of achievement and aptitude tests. The language difficulty was circumvented by translating questions into Arabic. 26 applicants were accepted for preschooling and repeatedly tested during that time. Five of these were finally trained as pilots and

received their licenses. Some tests proved to be without merit for this sample (e.g., the Tool Knowledge Test), others did not yield reliable results. The Verbal Meaning Test, the Division Test, the Way-Figures Test, Figures Test, and Mace Training Speed Test were reliable. The factor-analyzed results of these tests yielded 2 factors, called school abilities and space orientation, which correlated significantly with the achievement tests. (English & French summaries)—*W. J. Koppitz*.

13662. Rand, Thomas M. & Wexley, Kenneth N. (PPG Industries, Applied Behavioral Research, Pittsburgh, PA) **Demonstration of the effect, "similar to me," in simulated employment interviews.** *Psychological Reports*, 1975(Apr), Vol 36(2), 535-544.—Simulated videotaped employment interviews were constructed in which a Black and a White applicant presented, in addition to job-related statements, biographical background information which was either similar or dissimilar to that of the White interviewer. 160 White undergraduates were selected as interviewers because they demonstrated extreme scores on the variables of need for affiliation and racial prejudice (measured by such tests as the Edwards Personal Preference Schedule and Holtzman D-scale). Results indicate that biographical similarity of interviewer and applicant led to higher ratings of the candidate's job suitability and other personal characteristics. Racially prejudiced interviewers were generally more negative in their evaluations of all candidates regardless of the applicant's race. Neither race of the applicant nor affiliation need of the evaluators showed significant main effects. Implications of the so-called "similar to me" effect are discussed in relation to the employment interview. (18 ref)—*Journal abstract*.

13666. Connelly, Edward M.; Bourne, Francis J.; Leontal, Diane G. & Knoop, Patricia A. **Computer-aided techniques for providing operator performance measures.** *US AFHRL Technical Report*, 1974(Dec), No 74-87, 82 p.—Describes the theory, structure, and implementation of a performance measurement processor written in FORTRAN IV that can accept performance demonstration data representing various levels of an operator's skill and, under user control, analyze data to provide candidate performance measures and valida-

tion test results. The processor accepts 2 types of information: sample performance data on magnetic tape and user information reflecting knowledge about features of the performance that are important to measurement. Functions of the processor in developing candidate performance measures and validation tests are described in detail. The processor can be applied to measurement problems where the human operator working with the equipment obtains demonstrations of various levels of performance. These applications include situations where criterion performance cannot be quantitatively predefined and/or the existing definitions are ambiguous. Demonstrations of some portions of the processor were accomplished using limited flight data from an instrumented aircraft from 5 undergraduate pilot training maneuvers.—*Journal abstract*.

13667. Făcăoaru, Cornelia. (Academiei de Stiinte Sociale si Politice, Inst de Psihologie, Bucharest, Rumania) **[A method of investigating the influence of solicitation on solving abilities.]** (Romanian) *Revista de Psihologie*, 1973(Win), Vol 19(4), 457-461.—Describes an original test for investigating the influence of work fatigue on problem-solving abilities. Eight engineers, 12 supervisors, and 21 operators were tested at the beginning of work and after 6 working hrs, in both the 1st and the 2nd shift. Test performances were significantly lower ($p < .03$) after 6 hrs of work than at the beginning of work in both shifts.—*Author abstract*.

13690. McDonnell, John F. (Claremont Graduate School) **An analysis of participative management as a choice of leadership style.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1339.

13691. Parks, Michael S. (U Georgia) **A generalized cybernetically-based model for heuristic decision simulation.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-A, Pt 1), 5401.

13692. Price, Kenneth H. (Michigan State U) **The effects of success, failure and no evaluation in participatory, autocratic and leaderless problem solving groups.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4730.

13693. Tudor, Smaranda. (U Bucharest, Inst of Psychology, Rumania) **[Comparison of the perception of supervisory tasks by supervisors and engineers.]** (Romn) *Revista de Psihologie*, 1973(Win), Vol 19(4), 421-431.—Studied 50 supervisors and 18 engineers in the chemical industry; the 2 groups were similar as to age, sex, seniority, and professional training. The methods used were study of organizational documents, photography of working-day activities, psychological analysis of tasks, and a questionnaire for evaluating the relative importance of 12 supervisory tasks, presented in random order. The data indicate significant agreement ($p < .005$) between the 2 groups as to the importance of supervisors' duties. Directly productive tasks were ranked highest by both groups, whereas psychological tasks (e.g., training in human relations, and supervising and leading work teams) were considered less important. (English summary)—C. Făcăoaru.

13694. Walker, James; Fletcher, Clive & McLeod, Donald. **Flexible working hours in two British government offices.** *Public Personnel Management*, 1975(Jul-Aug), Vol 4(4), 216-222.—Describes a detailed evaluation made by the British Civil Service in 2 of its offices where flexible working hours were introduced as a pilot program. Structured interviews, using open-ended questions, were conducted with 100 staff members who represented 80% of the employees in the 2 offices. Results show that a system of flexible working hours can function effectively in public service. Staff response was favorable and few adverse effects on the work were noted. The main employee satisfaction was the freedom from time constraint.—S. E. Bowser.

13695. Zaleznik, Abraham & Kets de Vries, Manfred F. (Harvard U Business School) **Power and the corporate mind.** Boston, MA: Houghton Mifflin, 1975. xi, 288 p. \$10.95.—Uses concepts from psychoanalysis, political science, and management theory, to examine the crucial effect that the personality of the chief executive has upon organization and society. Case histories include material from large corporations to small businesses, government bureaucracies, political parties, and campaign groups. The power of the individual executive to make choices is seen as doubly constrained: by the world outside the company and by his own conscious and unconscious motivations.

Organizational Behavior & Job Satisfaction

13696. ———. **Hawthorne revisited: The legend and the legacy.** *Organizational Dynamics*, 1975(Win), Vol 3(3), 66-80.—Reviews the Hawthorne studies and presents comments on them by several behavioral scientists, including P. Lawrence, E. Schein, H. Simon, R. Kahn, E. Lawler, R. Walton, F. Fieldler, and V. Vroom. A contingency theory maintaining that it takes

different kinds of people and organizations to perform different kinds of tasks is discussed. The function of the behavioral scientist in industry is to assist in matching person, organization, and task.—R. Tomasko.

13697. Allegro, J. T. & Kanter, H. W. (Rijks U Utrecht, Inst voor Sociale Psychologie, Netherlands) **[An experiment concerning the restructuring of tasks in a simulated organizational setting.]** (Dutch) *Mens en Onderneming*, 1975(Jul-Aug), Vol 29(4), 189-208.—Compared the effectiveness of task- vs process variables on intrinsic job satisfaction. Ss were 12 psychology students, divided into groups according to (a) nonenriched, (b) enriched, and (c) nonenriched-enriched structural variables. The task consisted of a coding exercise that consisted of morning and afternoon sessions. The difference between Groups (a) and (b) was that the latter was permitted to verify its exercises as a process-variable. Group (c) used Group (a)'s procedure in the morning and Group (b)'s in the afternoon. Differences between the groups were measured by a subscale of the Job Description Index and 4 informal attitude questionnaires. Analyses indicated that for the morning session, Group (b) differed significantly from (a) and the morning scores of (c) in the quality and quantity of work. The total scores of (c) differed significantly from (a) and (b) in intrinsic work satisfaction. Only Group (c) had a positive attitude toward the task. The lack of significant relationships among the results indicates no support for task-structural principles but some support for process variables on intrinsic job satisfaction.—A. J. Ter Keurst.

13698. Berry, Charles C. (Johns Hopkins U) **Changing employers and changing jobs: The career patterns of Black and White men.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 7336-7337.

13699. Brightman, Harvey J. (Miami U, OH) **Leadership style and worker interpersonal orientation: A computer simulation study.** *Organizational Behavior & Human Performance*, 1975(Aug), Vol 14(1), 91-122.—Constructs a simulation model of an industrial work group, after the first testing of the reliability of the stochastic simulation model. Reliability is defined as the capacity of the simulation model to generate consistent output time series regardless of the stream of pseudorandom numbers used in driving the model. Spectral analysis is used to compare the cyclic behavior of the output time series for the initial and replicated runs for each experimental cell. The output of the model is compared to a "real world" benchmark study. In a replicated 3×5 experiment the model is utilized to examine the impact of leadership style and work force composition on worker productivity, job satisfaction, and group cohesiveness over a simulated period of 5 yrs. 6 specific hypotheses are tested. It is concluded that the simulation technique is a feasible vehicle for conducting research into organizational and industrial behavior. (34 ref)—*Journal abstract*.

13700. Byrne, Jean C. (U Notre Dame) **Correlates of interlevel conflict in the mental hospital organization.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-A), 6754-6755.

1974(Nov-Dec), Vol 9(6), 521-536.—Discusses the value of mental hygiene and psychiatry in establishing positive work patterns for both trade unions and workers. (15 ref)

13702. Chow, Esther N. (U California, Los Angeles) **Style of supervision and compliant behavior: An experimental study.** *Dissertation Abstracts International*, 1973(Jul), Vol 34(1-A), 437-438.

13703. Davies, Celia & Francis, Arthur. (Imperial Coll, London, England) **The many dimensions of performance measurement: There is more to performance than profits or growth.** *Organizational Dynamics*, 1975(Win), Vol 3(3), 51-65.—Studied the effects of organizational structure on performance outcomes in 3 medium-sized British hospitals. Hospital staff were asked to rank order a list of 11 possible organizational objectives. Questionnaires and structured interviews were also used. Results indicate 2 reasons why there is no single way to achieve high performance: (a) There is no "best performance" to be had. (b) It is hard to measure the complex array of variables influencing the performance outcome of an organization.—R. Tomasko.

13704. Dowling, William F. **At General Motors: System 4 builds performance and profits.** *Organizational Dynamics*, 1975(Win), Vol 3(3), 23-38.—Discusses the General Motors adaptation of R. Likert's System 4 management. An organizational development effort is described that defines performance in terms of employee satisfaction as well as production, and is based on the active participation of top management.

13705. Dunham, Randall B. & Herman, Jeanne B. (U Wisconsin, Graduate School of Business, Madison) **Development of a female Faces Scale for measuring job satisfaction.** *Journal of Applied Psychology*, 1975(Oct), Vol 60(5), 629-631.—Describes the development of a female version of T. Kunin's male Faces Scale, a measure of job satisfaction. Developmental and validation data from 118 undergraduates and 103 employees of a pharmaceutical firm show that male and female versions of the Faces Scale can be used with male or female Ss without biasing the data.

13706. Durand, Douglas E. (U Missouri, School of Business Administration, St Louis) **Relation of achievement and power motives to performance among Black businessmen.** *Psychological Reports*, 1975(Aug), Vol 37(1), 11-14. Conducted a 2-yr follow-up study of entrepreneurial behavior of 29 Black businessmen. As predicted, high achievement needs (assessed by the IAI) were associated with performance (assessed by Timmon's Business Activity Interview). When the effects of power needs in combination with achievement motives were studied, high performing Ss were those with high achievement and lowered power needs, this relationship also held for social power and personal power motives.—*Journal abstract.*

13708. Guinn, Nancy. **Identification of service irritants: Australia, Canada, United Kingdom and United States.** *US AFHRL Technical Report*, 1975(Jul), No 75-52, 22 p.—A review of research on service irritants

cited by military servicemen in Australia, Canada, the United Kingdom, and the US revealed an outstanding degree of similarity in responses. Certain factors such as inadequate pay, domestic problems associated with military life, change of station, and military rules and regulations were universally mentioned as negative aspects of a military career. The effect of these irritants on enlistment motivation, job satisfaction, and retention are discussed. (26 ref)—*Journal abstract.*

13709. Gunderson, E. K. (US Navy Medical Neuropsychiatric Research Unit, Epidemiology & Operational Psychiatry Div, San Diego, CA) **Psychological studies in Antarctica.** San Diego, CA: Naval Health Research Ctr, No 71-14, [1970]. 18 p.—Clinical evaluations by psychologists and psychiatrists, biographical information, and attitude and personality tests have been used in selection studies of antarctic personnel since 1963. The present series of studies, using supervisor ratings and peer nominations as performance criteria for a total of 2,122 US Navy and civilian antarctic personnel, resulted in a general concept of effective individual performance that included 3 essential behavioral components: emotional stability, task motivation, and social compatibility. The contributions of the various sources of screening information to the prediction of individual and group adjustment during the antarctic winter were determined, and a high degree of specificity in the relevance of screening predictors for the various behavioral criteria and occupational subgroups was found. Navy men showed significant deterioration in morale or satisfaction during the winter months, whereas civilians showed little or no change. Thus occupational role was an important determinant of job satisfaction during long-term isolation and confinement. (42 ref)

13723. O'Reilly, Charles A. & Roberts, Karlene H. (U California, Berkeley) **Individual differences in personality, position in the organization, and job satisfaction.** *Organizational Behavior & Human Performance*, 1975(Aug), Vol 14(1), 144-150.—Administered the Cornell Job Description Index and the Self-Description Inventory to 578 US Naval officers and enlisted men to examine the relationships among 13 individual traits, 3 structural characteristics of the position, and 5 aspects of job satisfaction. Partial correlations were first used to control for the effects of the structural characteristics, and canonical correlations were computed to assess relationships among personality variables and job satisfaction. No significant relationships were found. Canonical correlations between structural characteristics and job satisfaction, with personality traits partialled out, were significant. Results were validated by randomly splitting the sample and recomputing the analyses. The general hypothesis that individual work-related traits affect job satisfaction was supported only insofar as intrinsic traits may predict attainment of position. It is concluded that structural characteristics appear to be more directly linked to job attitudes than personality traits. (20 ref)—Journal abstract.

13725. Sarges, Werner. (Hochschule der Bundeswehr Hamburg, Fachbereich Pädagogik, W Germany) **[Test of Fiedler's contingency model of leadership effectiveness with co-acting groups.]** (Germ) *Zeitschrift für Experimentelle und Angewandte Psychologie*, 1975, Vol 22(2), 241-262.—Investigated the validity of F. E. Fiedler's model by evaluating 89 co-acting groups working in different insurance companies. Improved measurements of group performance were developed and used. Since no significant correlation could be found between group performance and the Least Preferred Co-worker score, nor could any influence of the group climate on group performance be detected, increasing doubts about the validity of Fiedler's model arose and

are discussed. (English & French summaries) (38 ref) —*W. J. Kopitz.*

13726. Shipman, James K. (Kent State U) **A factor analytic investigation of organizational source credibility using first-level supervisors as subject populations.** *Dissertation Abstracts International*, 1974(Sep), Vol 35(3-A), 1776.

13727. Shore, Miles F. (Tufts—New England Medical Ctr, MA) **Psychotherapy and the real world.** *Massachusetts Journal of Mental Health*, 1974(Fal), Vol 5(1), 5-18. —Presents a 4th model of human motivation in organizations, adding psychoanalytic theory and clinical experience to economic, social, and self-actualizing or psychological theories. An example of interaction between administration and a community group is analyzed in terms of this theory. The need to establish realistic expectations on the part of the client group is discussed in terms of transference and countertransference phenomena. The principles of psychotherapy may be applied to the conduct of human relationship in administrative settings. —*P. R. Sweet.*

13728. Smart, John C. & Elton, Charles F. (Virginia Polytechnic Inst & State U) **Goal orientations of academic departments: A test of Biglan's model.** *Journal of Applied Psychology*, 1975(Oct), Vol 60(5), 580-588. —Examined variations in the goal orientations of 488 academic departments in 32 public universities by stepwise multiple discriminant analysis procedures. In a nationwide study, department chairmen rated 11 goals on a 5-point scale according to the amount of emphasis placed on each. 3 discriminant functions were statistically significant. The nature of the differentiation provided by these 3 discriminant functions was highly consistent with the 3 dimensions in a model developed by A. Biglan (see PA, Vol 51:1819). Results suggest that Biglan's clustering of academic areas according to their (a) concern with a single paradigm, (b) concern with application, and (c) concern with life systems has considerable potential for providing a conceptual framework to guide future research investigating academic departments. 13729. Szura, John P. & Vermillion, Mary E. (Illinois Inst of Technology) **Effects of defensiveness and self-actualization of a Herzberg replication.** *Journal of Vocational Behavior*, 1975(Oct), Vol 7(2), 181-187. —Tested 200 male teachers and/or clergymen for self-actualization, internal vs external locus of control, repression vs sensitization, need for approval, and the tendency to attribute job satisfaction and dissatisfaction to motivators and hygienes. Results indicate that self-actualization is related to the attribution of satisfaction to both motivators and hygienes and that external locus of control, sensitization, and low need for approval are related to the attribution of dissatisfaction to both motivators and hygienes. Discussion includes a caution on the design of F. Herzberg replications and a suggestion that attribution of job feelings may be a function, in part, of personality variables affecting only a good or only a bad feeling. —*Journal abstract.*

13730. Türkel, Süleyman. (U Southern California) **Pay utility in the public sector.** *Dissertation Abstracts International*, 1974(May), Vol 34(11-A), 7319.

13731. Walton, Richard E. (Harvard U, Graduate School of Business Administration) **The diffusion of new work structures: Explaining why success didn't take.** *Organizational Dynamics*, 1975(Win), Vol 3(3), 2-22. —Discusses 8 organizational work restructuring experiments. Reasons for the blockage of the diffusion of this innovation in the organization are suggested.

13732. Warr, Peter & Wall, Toby. **Work and well-being.** Baltimore, MD: Penguin, 1976. 220 p. \$3.95. —Discusses the quality of working life, examining the work satisfaction and mental health of individual employees in all types of organizations, as reported in research studies. The general emphasis is toward the jobs of lower-level employees.

13733. Bauman, Rick D. (U Wisconsin) **A cybernetic analysis of delayed feedback in simulated automobile steering.** *Dissertation Abstracts International*, 1974(Mar), Vol 34(9-B), 4725.

Environmental Psychology & Environmental Issues

13734. Bluhm, Louis H. (U Illinois) **Some pollution-related attitudes of high school youth in the United States and Brazil.** *Dissertation Abstracts International*, 1974(Jun), Vol 34(12-A, Pt 1), 7882.

13735. Brain, Paul. (University Coll Swansea, England) **Studies on crowding: A critical analysis of the implications of studies on rodents for the human situation.** *International Journal of Mental Health*, 1975(Fal), Vol 4(3), 15-30. —Since it is impossible to conduct studies of crowding that use human beings as Ss, most such studies have been conducted with rodents. This research has dealt with the effects of population density, of housing, and of various pharmacological treatments on rodents' neural activity, endocrine function, neurochemistry, behavior, disease resistance, and reproductive physiology. Hidden difficulties with rodent studies, of which even the researcher is not always aware, are pointed out. Some phenomena reported from studies of human responses to pharmacological and stress treatment may parallel phenomena observed in rodents. However, man is very adaptable and often seems able to mitigate the effects of stressful factors. For this and other reasons, attempts to extrapolate from rodents to man are dangerous and should be hedged with qualifications. Rodent studies are directly relevant to the effects of crowding on man in 2 respects: they permit the development of research techniques and indicate relationships appropriate for research, and they illustrate the complexities involved in population studies even of rodents, thus warning against simplistic statements about physiology, behavior, and stress in humans. (3 p ref) —*A. H. Alawi.*

13736. Cappon, Daniel. (York U, Toronto, Canada) **Designs for improvements in the quality of life in downtown cores.** *International Journal of Mental Health*, 1975(Fal), Vol 4(3), 31-47. —Presents a wide-ranging list of questions which urgently need answers if the problems of today's gigantic cities are to be solved. Personal experiences with 3 attempts to create environments and social climates designed to enrich the quality of urban life are described. —*A. H. Alawi.*

13737. **Freeman, Hugh.** (Salford Area Health Authority, Manchester, England) **The environment and human satisfaction.** *International Journal of Mental Health*, 1975(Fal), Vol 4(3), 6-14.—Discusses the relationship between psychiatric disorders and urbanization. This research area has been neglected; neither valid data, properly defined concepts, nor firmly established conclusions have been developed. Although inner-city slums have a higher incidence of schizophrenia, juvenile conduct disorders, deviance, and retardation, it is not known whether the slums produce these conditions or whether individuals prone to such problems tend to drift into slum situations. Among the environmental stress factors in cities which may lead to psychiatric imbalance are crowding, the huge size of cities, their impersonality, higher noise levels, greater expectation of danger on city streets, the time expended in commuter traveling, inappropriate redevelopment programs, the destruction of environmental continuity, and the ignoring of individual and community feelings. To achieve rational urban design and expenditure of resources will require much greater collaboration among scientific disciplines than has so far been accomplished.—*A. H. Alawi.*
13738. **Goodey, B. & Travis, A. S.** (U Birmingham, Ctr for Urban & Regional Studies, England) **Community views of environmental conditions.** *International Journal of Mental Health*, 1975(Fal), Vol 4(3), 79-91.—Discusses environmental management in terms of the 2 groups involved: those who use the environment and those who plan it. Many environmental studies have already been conducted; what is needed now is coordination and effective use of the resulting data. Three types of localities must be considered in planning: private places, public places, and distant places. The need for cooperation among many disciplines is stressed. Political factors and the role of education are discussed. It is suggested that environmental planning, particularly in urban renewal projects, has too often ignored the feelings of local community residents.—*A. H. Alawi.*
13739. **Hawel, Wolfgang.** (U Dortmund, Inst für Arbeitspsychologie, W Germany) **[Investigation of psychological and psychophysiological effects of repeated intermittent pink noise lasting 4 hours.]** (Germ) *Zeitschrift für Experimentelle und Angewandte Psychologie*, 1975, Vol 22(4), 613-629.—Exposed 10 male students once a week to intermittent noise of 90 db for 4 hrs. The noise had nonmeasurable effect on simple tasks, but more complex tasks deteriorated. The significant effect of the noise concerned the affective state of Ss. Fewer anxiety symptoms were recorded in the noise situations than in complete quiet. (English & French summaries) (27 ref)—*W. J. Koppitz.*
13740. **Hillman, H.** (U Surrey, Unity Lab, Guildford, England) **The involvement of psychiatrists in town planning.** *International Journal of Mental Health*, 1975(Fal), Vol 4(3), 71-78.—Stresses that very little is known about the psychopathology of urban living, aging, and dying, and suggests that psychiatrists should be deeply involved in sociological investigation. They should collect accurate data on many aspects of urban life: problems of the family, of working women, of the aged, of environmental stress, etc. More psychiatrists should be trained to lead research teams studying psychopathology. A new psychological discipline, dealing with town planning, should be established; and meanwhile, psychologists and psychiatrists should be represented on all town and transport planning committees. (21 ref)—*A. H. Alawi.*
13741. **Morris, Charles.** **A political view of environmental problems.** *International Journal of Mental Health*, 1975(Fal), Vol 4(3), 92-95.—Acknowledges the responsibility of central government in solving urban problems of transport, housing, roads, planning, environmental protection, etc, but emphasizes the concurrent need for involvement of local government and the participation of those who will be affected by proposed environmental changes.—*A. H. Alawi.*
13742. **Newman, Oscar.** (Inst for Community Design Analysis, New York, NY) **Reactions to the "defensible space" study and some further findings.** *International Journal of Mental Health*, 1975(Fal), Vol 4(3), 48-70.—Argues that in choosing the building form for an urban housing development the concept of "defensible space" is all-important; i.e., the design should allow residents to control the areas adjacent to their homes and encourage the use of available space for specific desired activities. When small areas are shared by a limited number of families, as in walk-up apartments, residents will assume rights and responsibilities toward those areas which they do not feel toward the larger areas, shared by many families, which are found in high-rise buildings. Two housing developments of approximately the same population density per acre are described. One consisted of 12-story superblocks with unrestricted access, interior entrances to buildings, and much uncontrolled public space. It had a high crime rate and eventually, with 85% vacancy, was demolished. The other was composed of 3-story buildings entered directly from the street. Although it was in a high-crime area, it had a very low rate of crime and vandalism. It cost 20% less than the high-rise project to build, and still has a long waiting list.—*A. H. Alawi.*
13743. **Scipione, Paul A.** (Rutgers State U) **Human attitudes about the macro-proximal environment.** *Dissertation Abstracts International*, 1974(Apr), Vol 34(10-B), 5231.
13744. **Tindel, M.; Lavillaureix & Singer, L.** **[Mental health and housing: The problem of large housing developments: An epidemiologic study of Mulhouse (France).]** (Fren) *Annales Médico-Psychologiques*, 1975(Jun), Vol 2(1), 31-63.—Describes some of the mental health hazards and problems that are exacerbated by the large urban housing concentrations of today. An increased density of habitation, whether in old and dilapidated regions or in areas of modern high-rise construction, inevitably brings noise pollution, lack of privacy, inadequate play space for children, intrusions by the disordered behaviors of others, and so on. Newer and older housing (individual and collective) are compared as to cleanliness, costs, crowding, transport, etc, and in terms of the human problems presented by psychosis, alcoholism, suicide, neurological disease, and other deviant behaviors. The magnitude of the methodological problems encountered, and the uncertainty about the etiology of the mental afflictions, do not permit a firm interpretation of the data. Housing developments are

not, in themselves, specifically associated with an elevated psychiatric morbidity, but a marked increase in habitation density, with its usual accompaniments of poor hygiene and lack of privacy, does appear to constitute a clear risk of increased psychiatric morbidity. (45 ref)—*H. E. King.*

13760. von Thun, Friedmann S.; Steinbach, Ingrid; Tausch, Anne-Marie & Neumann, Klaus. (U Hamburg, Psychologisches Inst III, W Germany) **[TV advertising as an educator of millions: A comparative study in East and West Germany.]** (Germ) *Psychologie in Erziehung und Unterricht*, 1974, Vol 21(6), 355-364.—After training, 25 undergraduates majoring in psychology at Hamburg University rated 30 advertisements on TV in East Germany (EG) and 30 from West Germany (WG). Interrater reliability was .66 for EG, .76 for WG. Young, well-groomed, beautiful people appeared in 3% of the EG and 50% of the WG spots. The importance of physical and mental well-being and improved social relations were rated significantly higher in the advertisements from WG, while their truthfulness was rather lower. The background was significantly less realistic in WG ads and their informative content lower. Significant and very significant correlations (between .33 and .78) were found between uselessness of an article and the lack of realism in the background, the suggested advantages, and the absence of relevant information. The advertisements of both countries presented better groomed persons in unrealistic scenery when an article was not presented as good for health. It is suggested that schools could utilize the methods of the experiment to immunize students against the detrimental effects of TV advertising. (English summary)—*W. O. Horn.*

BRIEF SUBJECT INDEX

Entries in the Brief Subject Index are derived from a 4,000-term *Thesaurus of Psychological Index Terms*. Only those terms representing subject matter content covered in this monthly issue are listed. A thesaurus term missing from the listing indicates that no material of major relevance to the concept is included in the issue. Records are indexed at the level of specificity contained in each document. Each index entry also refers the reader to more specific concepts related to each term. Thus, a reader interested in articles concerning childhood psychosis may find additional relevant information under "early infantile autism."

Adults [See Also Aged, Middle Aged, Young Adults] 11421, 11429, 11501, 11632, 11844, 11878, 11887, 11915, 11936, 11948, 11952, 11965, 11969, 11990, 11991, 11997, 12092, 12120, 12162, 12175, 12288, 12354, 12356, 12367, 12413, 12531, 12537, 12683, 12710, 13031, 13356, 13643, 13646
Adverbs 11230
Advertising [See Also Television Advertising] 13745, 13748, 13750, 13753, 13758
Aerospace Personnel [See Aircraft Pilots]
Aesthetic Preferences 11840, 11861, 12047, 12298
Aesthetics 13185
Aetiology [See Etiology]

BRIEF SUBJECT INDEX

- Affection** 12272
Affective Disturbances [See Also Depression (Emotion), Involuntary Depression] 12379, 12398
Affective Psychosis [See Involuntary Depression, Manic Depressive Psychosis]
Afferent Stimulation 11718
Afferentiation [See Afferent Stimulation]
Affiliation Motivation 12104, 12132, 12227, 13662
Africa 11914, 11973, 11980, 12115, 12221, 13440
Aftercare 12776
Aftereffect (Perceptual) [See Perceptual Aftereffect]
Age Differences 11576, 11595, 11610, 11618, 11632, 11663, 11680, 11739, 11830, 11834, 11862, 11864, 11869, 11887, 11896, 11901, 11904, 11919, 11920, 11921, 11928, 11936, 11948, 11950, 11954, 11958, 11960, 11961, 11965, 11966, 11968, 11969, 11973, 11981, 11983, 11985, 11990, 11991, 11993, 11994, 11996, 11997, 11999, 12001, 12009, 12011, 12027, 12030, 12032, 12038, 12118, 12135, 12176, 12180, 12200, 12262, 12288, 12290, 12317, 12337, 12472, 12575, 12630, 12816, 12848, 12878, 12933, 12974, 13053, 13097, 13104, 13131, 13189, 13202, 13300, 13318, 13331, 13360, 13374, 13438, 13440, 13444, 13453, 13507, 13559, 13592, 13596, 13622, 13628, 13743
Aged 11309, 11442, 11610, 11680, 11866, 11869, 11870, 11881, 11893, 11902, 11904, 11991, 11992, 11999, 12010, 12076, 12084, 12086, 12088, 12091, 12118, 12157, 12278, 12338, 12352, 12370, 12544, 12603, 12768, 12793, 13160, 13740
Agencies (Groups) [See Organizations]
Aggressive Behavior [See Also Animal Aggressive Behavior, Attack Behavior, Conflict, Violence, War] 11848, 12079, 12102, 12139, 12194, 12232, 12233, 12241, 12246, 12255, 12265, 12276, 12466, 12507, 13487, 13702
Aggressiveness 13185
Aging (Physiological) [See Physiological Aging]
Agitated Depression [See Depression (Emotion)]
Agonistic Behavior [See Aggressive Behavior]
Air Force Personnel 13671, 13676
Aircraft Pilots 13640, 13660
Alcohol Drinking Patterns 12175, 12177, 12180, 12185, 12581, 12842, 12845, 12847
Alcohol Intoxication 12824, 12845
Alcoholic Beverages 11773
Alcoholic Hallucinations [See Delirium Tremens, Korsakoff's Psychosis]
Alcoholic Psychosis [See Also Delirium Tremens, Korsakoff's Psychosis] 12561
Alcoholics Anonymous 12185
Alcoholism [See Also Korsakoff's Psychosis] 11300, 12177, 12185, 12327, 12460, 12472, 12480, 12482, 12486, 12487, 12495, 12559, 12573, 12578, 12821, 12822, 12824, 12828, 12830, 12832, 12835, 12836, 12839, 12840, 12841, 12842, 12843, 12844, 12845, 12847, 12849, 12851
Alcohols [See Ethanol, Isoproterenol, Propranolol, Tetrahydrocannabinol]
Alexia [See Aphasia]
Algebra [See Mathematics Education]
Algorithms 11473, 12412, 13117, 13290, 13524
Alienation 12075, 12082, 12092, 12442, 12469, 13393, 13397, 13710
Alkaloids [See Apomorphine, Caffeine, Mescaline, Morphine, Nicotine, Physostigmine, Quinine, Reserpine, Scopolamine, Strychnine, Theophylline]
Allport Vernon Lindzey Study Values 13144
Alpha Rhythm 11278, 11616, 11640, 11670, 11680
Alphabets [See Also Letters (Alphabet)] 11472
Altruism 12011, 12093, 12203, 12235, 13005
Ambivalence 12901
Amentia [See Mental Retardation]
American Indians 12095, 12581, 12849, 13139, 13293, 13429
Amine Oxidases [See Monoamine Oxidases]
Amines [See Amitriptyline, Amphetamine, Catecholamines, Chlordiazepoxide, Chlorpromazine, Dextroamphetamine, Dopamine, Epinephrine, Imipramine, Methylphenidate, Norepinephrine, Phenoxylbenzamine, Physostigmine, Scopolamine, Serotonin]
Amino Acids [See Also Folic Acid, Glycine, Tyrosine] 11606, 11684
Amitriptyline 12846
Amnesia 11557, 11711, 11795, 11807, 11815, 11821
Amphetamine 11688, 11742, 11761
Amphetamine (D-) [See Dextroamphetamine]
Amphetamine (DL-) [See Amphetamine]
Amphetamine Sulfate [See Amphetamine]
Amphibia [See Frogs]
Amputees 12659
Amygdaloid Body 11699, 11750, 11798
Anagram Problem Solving 11497
Analeptic Drugs [See Strychnine]
Analgesic Drugs [See Also Methadone, Morphine, Novocaine, Quinine, Scopolamine] 11768
Analog Computers 11248
Analysis of Covariance 11328, 11331, 11335, 11336
Analysis of Variance 11330, 11334, 11336
Analysts [See Psychoanalysts]
Analytical Psychotherapy 12620, 12629, 12631, 12639
Ancestors [See Also Parents] 12109
Androgens [See Also Testosterone] 11695, 11705
Anesthetic Drugs [See Local Anesthetics, Novocaine, Pentobarbital, Quinine]
Anger [See Hostility]
Anxiety [See Anxiety]
Anguish [See Distress]
Animal Aggressive Behavior [See Also Attack Behavior] 11583, 11585, 11598, 11611, 11642, 11695, 11723, 11738, 11746, 11766, 11803, 11809
Animal Behavior [See Animal Ethology]
Animal Biological Rhythms [See Also Animal Circadian Rhythms] 11645
Animal Breeding 11574, 11597, 11611, 11689, 11759, 11760
Animal Circadian Rhythms 11582, 11603, 11647, 11648, 11728, 11748, 11813
Animal Communication 11596, 11599
Animal Division of Labor 11587
Animal Dominance 11539, 11584
Animal Drinking Behavior 11551, 11592, 11600, 11636, 11681, 11691, 11702, 11716, 11732, 11735, 11737, 11771, 11805, 11811
Animal Environments 11530, 11540, 11545, 11548, 11574, 11579, 11585, 11588, 11590, 11601, 11606, 11769, 11788
Animal Escape Behavior 11646, 11723
Animal Ethology [See Also Animal Aggressive Behavior, Animal Biological Rhythms, Animal Circadian Rhythms, Animal Communication, Animal Division of Labor, Animal Dominance, Animal Drinking Behavior, Animal Escape Behavior, Animal Exploratory Behavior, Animal Feeding Behavior, Animal Innate Behavior, Animal Instinctive Behavior, Animal Maternal Behavior, Animal Mating Behavior, Animal Nocturnal Behavior, Animal Open Field Behavior, Animal Sex Differences, Animal Sexual Receptivity, Animal Social Behavior, Animal Vocalizations, Attack Behavior, Hibernation, Imprinting, Migratory Behavior (Animal), Territoriality] 11536, 11540, 11585, 11589, 11590, 11769
Animal Exploratory Behavior 11532, 11566, 11734, 11735, 11789
Animal Feeding Behavior 11559, 11582, 11588, 11590, 11596, 11645, 11690, 11691, 11708, 11719, 11737, 11746, 11748, 11791, 11798
Animal Innate Behavior 11598, 11600
Animal Instinctive Behavior 11545, 11593, 11598
Animal Maternal Behavior 11595, 11597
Animal Mating Behavior [See Also Animal Sexual Receptivity] 11591, 11602, 11685, 11689, 11690, 11709
Animal Motivation 11531, 11545, 11549, 11555, 11559, 11617, 11708
Animal Navigation [See Migratory Behavior (Animal)]
Animal Nocturnal Behavior 11594
Animal Open Field Behavior 11579, 11590, 11730, 11740, 11743, 11770
Animal Sex Differences 11594
Animal Sexual Receptivity 11765
Animal Social Behavior [See Also Animal Aggressive Behavior, Animal Communication, Animal Division of Labor, Animal Dominance, Animal Maternal Behavior, Animal Mating Behavior, Animal Sexual Receptivity, Attack Behavior] 11539, 11584, 11585, 11587, 11589, 11595, 11601, 11695, 11708, 11730, 11743, 11771, 11775, 11778, 11803, 11825
Animal Strain Differences [See Animal Breeding, Genetics]
Animal Vocalizations 11588, 11597, 11599, 11601, 11602, 11700
Animals [See Also Related Terms] 11642, 11963
Animism 12410
Annual Leave [See Employee Leave Benefits]
Anodynes [See Analgesic Drugs]
Anomie [See Alienation]
Anorexia Nervosa 12385

BRIEF SUBJECT INDEX

- ANOVA (Statistics) [See Analysis of Variance]
 Anoxia 11774
 Antagonism [See Hostility]
 Anthropology 13243
 Antibiotics [See Cycloheximide]
 Antibodies 12730
 Anticonvulsive Drugs [See Pentobarbital, Phenobarbital]
 Antidepressant Drugs [See Also Amitriptyline, Imipramine, Methylphenidate] 11808, 12722, 12724, 12731, 12846
 Antiemetic Drugs [See Chlorpromazine, Sulpiride]
 Antihypertensive Drugs [See Chlorpromazine, Pargyline, Phenoxybenzamine, Reserpine]
 Antipathy [See Aversion]
 Antipsychotic Drugs [See Chlorpromazine, Reserpine]
 Antischizophrenic Drugs [See Chlorpromazine]
 Antisemitism 12099
 Antisocial Behavior [See Also Child Abuse, Crime, Homicide, Juvenile Delinquency, Recidivism, Shoplifting] 12038, 12062, 12203, 12357, 12469, 12479, 12688, 13627
 Antisocial Personality 12461, 12476, 12479, 12499, 12813
 Anxiety [See Also Anxiety Neurosis, Separation Anxiety] 11425, 11506, 11653, 12177, 12199, 12244, 12300, 12316, 12330, 12356, 12476, 12487, 12644, 12676, 12680, 12705, 12716, 13181, 13190, 13276, 13325, 13364, 13529, 13534, 13574, 13584, 13595, 13599, 13603, 13617, 13618, 13711
 Anxiety Neurosis 12374, 12683
 Anxiety Reducing Drugs [See Tranquilizing Drugs]
 Anxiousness [See Anxiety]
 Apache Indians [See American Indians]
 Apes [See Primates (Nonhuman)]
 Aphasia 12511, 12571
 Apomorphine 11258, 11792
 Apomorphine Hydrochloride [See Apomorphine]
 Apoplexy [See Cerebrovascular Accidents]
 Appalachia 12940
 Apparatus [See Also Computers, Electrodes, Tape Recorders] 11249, 11251, 11258, 11261, 11262, 11263, 11265, 11267, 11269, 11272, 11579
 Apparent Movement 11374, 11375
 Apparent Size 11389
 Appetite [See Also Hunger] 11682
 Appetite Depressing Drugs [See Amphetamine, Dextroamphetamine]
 Appetite Disorders [See Anorexia Nervosa, Hyperphagia, Obesity]
 Applied Psychology [See Clinical Psychology, Community Psychology, Counseling Psychology, Medical Psychology, School Psychology, Social Psychology]
 Apprehension [See Anxiety]
 Approval (Social) [See Social Approval]
 Aptitude [See Ability]
 Aptitude (Academic) [See Academic Aptitude]
 Aptitude Measures [See Also Differential Aptitude Tests, Graduate Record Examination] 11295, 11302, 11304, 11305, 11312, 13518, 13536, 13568, 13569, 13577, 13623, 13660
 Arachnida 11528
 Arapaho Indians [See American Indians]
 Arithmetic [See Mathematics Education]
 Arousal (Physiological) [See Physiological Arousal]
 Arousal (Sexual) [See Psychosexual Behavior]
 Arrest (Law) [See Legal Arrest]
 Art [See Also Drawing, Painting (Art)] 12344, 13324
 Art Education 13114, 13120, 13185, 13229, 13337
 Art Therapy 12833
 Arterial Pulse 12582
 Arteries (Anatomy) 11262
 Arteriosclerosis [See Also Cerebral Arteriosclerosis] 12582
 Arthritis 12716
 Arthropoda [See Also Arachnida, Beetles, Drosophila, Insects] 11548
 Articulation (Speech) 11887, 11888, 12530
 Articulation Disorders [See Also Stuttering] 11909, 12532, 12533, 12740
 Artistic Ability 12298, 13114
 Artists 11860, 12337
 Arts [See Art, Autobiography, Dance, Drama, Drawing, Literature, Motion Pictures (Entertainment), Music, Painting (Art), Poetry, Prose]
 Artwork [See Art]
 Ashkenazim [See Judaism]
 Asia 11426, 11460, 12069, 13272, 13518, 13660
 Asphyxia [See Anoxia]
 Aspiration Level 11497, 12850, 13376
 Aspirations [See Educational Aspirations, Occupational Aspirations]
 Assertiveness 12209, 12674, 12676, 12699, 12713, 12805, 13630
 Assessment [See Measurement]
 Assimilation (Cultural) [See Cultural Assimilation]
 Assistance (Social Behavior) 12231, 12248, 12312, 13170
 Association Learning (Paired) [See Paired Associate Learning]
 Associations (Contextual) [See Contextual Associations]
 Associations (Groups) [See Organizations]
 Associations (Word) [See Word Associations]
 Associative Processes [See Also Cognitive Contiguity, Contextual Associations] 11455, 11482, 11578, 11996, 12333
 Asylums [See Psychiatric Hospitals]
 Ataractic Drugs [See Tranquilizing Drugs]
 Ataractic Drugs [See Tranquilizing Drugs]
 Athletes 11362, 12102, 12280, 12552, 13410, 13555
 Athletic Participation 11347, 12264, 13062, 13074, 13416, 13458, 13555
 Atlas (Stereotaxic) [See Stereotaxic Atlas]
 Atmospheric Conditions 11538
 Attack Behavior 11766
 Attainment (Achievement) [See Achievement]
 Attempted Suicide 12453, 12483, 12492, 12494
 Attendance (School) [See School Attendance]
 Attention [See Also Selective Attention, Vigilance] 11339, 11344, 11349, 11380, 11383, 11408, 11439, 11452, 11453, 11483, 11496, 11745, 11949, 12432, 12449, 12502, 12535, 13035, 13112, 13164, 13264, 13383, 13387, 13431
 Attention Span 12040
 Attenuation (Stimulus) [See Stimulus Attenuation]
 Attitude Change 11841, 11851, 11852, 11881, 12092, 12144, 12165, 12196, 12197, 12198, 12218, 12244, 12257, 12270, 12271, 12667, 12816, 12849, 12899, 12996, 13004, 13031, 13084, 13085, 13094, 13167, 13208, 13275, 13388, 13458, 13575, 13759
 Attitude Formation 12239, 12262
 Attitude Measurement 11276, 11277, 12058, 12273, 12519, 13544, 13545
 Attitude Measures [See Also Allport Vernon Lindzey Study Values, Opinion Attitude And Interest Survey] 11273, 11289, 11292, 11294, 11310, 11314, 13519, 13532, 13606
 Attitude Similarity 12211, 12236, 12263, 12268, 12277, 13380, 13537, 13662
 Attitudes [See Also Related Terms] 11511, 11845, 11869, 12058, 12063, 12065, 12076, 12078, 12151, 12294, 12327, 12338, 12468, 12551, 12668, 12784, 12789, 13121, 13140, 13631, 13734, 13743
 Attraction (Interpersonal) [See Interpersonal Attraction]
 Attribution 11501, 11846, 12019, 12155, 12250, 12252, 12274, 12331, 12634, 13033, 13692
 Audiences 12050
 Audiometry 11609, 11625, 11632, 11884, 13573
 Audiotapes 12885, 12911, 13546
 Audiovisual Aids (Educational) [See Educational Audiovisual Aids]
 Audiovisual Communications Media [See Audiocassettes, Educational Audiovisual Aids, Educational Television, Film Strips, Motion Pictures, Motion Pictures (Educational), Motion Pictures (Entertainment), Television Advertising, Videotapes]
 Audiovisual Instruction [See Also Televised Instruction, Videotape Instruction] 13177, 13330
 Audition [See Auditory Perception]
 Auditory Cortex 11727
 Auditory Discrimination [See Also Pitch Discrimination] 11246, 11345, 11401, 11402, 11403, 11409, 11414, 12928, 13312, 13328, 13573
 Auditory Evoked Potentials 11625, 11632, 11633, 11654, 11733, 11819
 Auditory Feedback 13383
 Auditory Hallucinations 11687, 12364
 Auditory Masking 11727, 12530, 12580
 Auditory Measurement [See Audiometry]
 Auditory Neurons 11614
 Auditory Perception [See Also Auditory Discrimination, Loudness Perception, Pitch Discrimination, Pitch Perception, Speech Perception] 11255, 11349, 11806, 11888, 11970, 12480, 12514, 12535, 12567, 12733, 13237, 13520, 13607
 Auditory Stimulation [See Also Auditory Feedback, Loudness, Noise Levels (Work Areas), Pitch (Frequency), Speech Pitch, Ultrasound, White Noise]

BRIEF SUBJECT INDEX

- College Teachers** 12201, 12954, 12971, 12972, 12992, 13012, 13039, 13048, 13058, 13072, 13297, 13366, 13371, 13379, 13391, 13403, 13410, 13423, 13424, 13438, 13553, 13716

BRIEF SUBJECT INDEX

- Colleges 12967, 13068, 13074, 13078, 13082, 13373, 13728
 Color [See Also Hue] 11537, 11545, 11924, 12298, 12310, 13202
 Color Perception 11373, 11382, 11526, 11533, 11543, 11613, 11659, 11927, 11948, 12502, 12505
 Commerce [See Business]
 Commitment (Psychiatric) 12154
 Communes [See Also Kibbutz] 12087
 Communication (Professional) [See Scientific Communication]
 Communication Skills 11844, 11852, 11888, 11921, 13097, 13133, 13175, 13464
 Communication [See Also Related Terms] 12056, 12068, 13713
 Communications Media [See Audiotapes, Books, Educational Audiovisual Aids, Educational Television, Film Strips, Mass Media, Motion Pictures, Motion Pictures (Educational), Motion Pictures (Entertainment), Newspapers, Television Advertising, Videotapes]
 Communism 11229, 11232, 11233
 Communities [See Also Communes, Kibbutz, Neighborhoods] 13022
 Community Attitudes 12145, 12149, 12490, 12902, 12940, 12978, 13121, 13738
 Community College Students 13295, 13297, 13418
 Community Colleges [See Colleges]
 Community Facilities [See Also Community Mental Health Centers, Housing, Suicide Prevention Centers] 12775
 Community Mental Health 12747, 12765, 12766, 12767, 12862
 Community Mental Health Centers 12747, 12755, 12756, 12757, 12758, 12760, 12763, 12769, 12771, 12772, 12773, 12776, 12778, 12779, 12780
 Community Mental Health Training 13509
 Community Psychiatry 12901
 Community Psychology 12914
 Community Services [See Also Crisis Intervention Services, Home Visiting Programs, Hot Line Services, Public Health Services] 12741, 12759, 12823, 12876, 12902, 12904, 13338
 Comparative Psychology 11552, 11593, 11756, 13735
 Compatibility (Interpersonal) [See Interpersonal Compatibility]
 Compensatory Education 13107, 13157, 13198, 13207, 13488
 Competition 11587, 12048, 12207, 12261, 12323, 12459
 Complexity (Cognitive) [See Cognitive Complexity]
 Complexity (Stimulus) [See Stimulus Complexity]
 Complexity (Task) [See Task Complexity]
 Compliance 12225, 12245, 13702
 Comprehension [See Also Listening Comprehension, Number Comprehension, Reading Comprehension, Sentence Comprehension] 11925
 Compressed Speech 11410, 11448
 Compulsions 12660, 12665
 Computer Applications [See Also Computer Assisted Diagnosis, Computer Assisted Instruction, Computer Simulation] 11253, 11266, 12125, 12345, 12721, 13176, 13524, 13563, 13666, 13684
 Computer Assisted Diagnosis 13581
 Computer Assisted Instruction 13113, 13117, 13181, 13466, 13684
 Computer Programming Languages 11256
 Computer Programs [See Computer Software]
 Computer Simulation 11268, 13691, 13699
 Computer Software 11256
 Computers [See Also Analog Computers] 11254, 11270
 Concept (Self) [See Self Concept]
 Concept Formation 11464, 11918, 11924, 11928, 11944, 11962, 11975, 11983, 12004, 12006, 12427, 12435, 13229, 13289, 13293, 13462
 Concept Learning 11419, 11439, 11485, 11486, 11491, 11570, 11974, 12291, 13126, 13132, 13151, 13165, 13317, 13323, 13337, 13341, 13478, 13494
 Concepts 11979, 12508, 13229
 Conceptualization [See Concept Formation]
 Conditioned Emotional Responses 11474, 11686, 11710, 11750
 Conditioned Reflex [See Conditioned Responses]
 Conditioned Responses [See Also Conditioned Emotional Responses, Conditioned Suppression] 11550, 11560, 11803
 Conditioned Suppression 11558, 11686, 11722, 11750
 Conditioning [See Also Avoidance Conditioning, Classical Conditioning, Conditioned Emotional Responses, Conditioned Responses, Conditioned Suppression, Counterconditioning, Escape Conditioning, Eyelid Conditioning, Operant Conditioning, Unconditioned Stimulus] 11670
 Conditioning (Avoidance) [See Avoidance Conditioning]
 Conditioning (Classical) [See Classical Conditioning]
 Conditioning (Escape) [See Escape Conditioning]
 Conditioning (Eyelid) [See Eyelid Conditioning]
 Conditioning (Operant) [See Operant Conditioning]
 Conditioning (Verbal) [See Verbal Learning]
 Cones (Eye) 11382
 Confabulation 12557
 Conflict [See Also Violence, War] 11239, 12306, 12939, 13245, 13700
 Conformity (Personality) 12206, 12245, 12266, 12465
 Congenital Disorders 12575
 Consciousness Disturbances [See Sleep Disorders, Suggestibility]
 Consciousness States [See Also Attention, Awareness, Selective Attention, Vigilance, Wakefulness] 11224, 11238, 11519, 11712
 Conservation (Concept) 11928, 11929, 11940, 11980, 11986, 11990, 13163, 13310
 Conservatism 12058, 12153, 12162, 12959
 Consonants 11847, 11887, 12530, 12587
 Consultation (Professional) [See Professional Consultation]
 Consumer Attitudes 12778, 13638, 13746, 13748, 13749, 13751, 13754, 13755, 13756, 13757, 13758, 13759
 Consumer Behavior 13631, 13746, 13747, 13750, 13752, 13753, 13754, 13756, 13757, 13758
 Consumer Protection 12915
 Content Analysis (Test) 13563
 Contextual Associations 13148, 13251
 Contiguity (Cognitive) [See Cognitive Contiguity]
 Contingency Management [See Also Token Economy Programs] 12509, 12638, 13060, 13166, 13241, 13514
 Continuing Education [See Higher Education]
 Continuous Reinforcement [See Reinforcement Schedules]
 Contour [See Form And Shape Perception]
 Contraception [See Birth Control]
 Contraceptive Methods [See Birth Control]
 Contribution (Professional) [See Professional Contribution]
 Control (Locus of) [See Internal External Locus of Control]
 Control (Stimulus) [See Stimulus Control]
 Convergent Thinking [See Inductive Deductive Reasoning]
 Conversation 11849, 11959, 12227, 13751
 Conversion Hysteria [See Conversion Neurosis]
 Conversion Neurosis 12907
 Convulsions 11711, 11719, 11753, 11821, 12549
 Cooperation 12189, 12222, 12261, 12459, 12710, 13146
 Coordination (Perceptual Motor) [See Perceptual Motor Coordination]
 Coping Behavior 11889, 12029, 12031, 13611
 Copulation [See Sexual Intercourse (Human)]
 Copulation (Animal) [See Animal Mating Behavior]
 Coronary Vessels [See Arteries (Anatomy)]
 Corpora Quadrigemina [See Optic Lobe, Superior Colliculus]
 Corpus Callosum 11729
 Correctional Institutions [See Also Prisons] 12797, 12805, 12807, 12818
 Correlation (Statistical) [See Statistical Correlation]
 Cortex (Auditory) [See Auditory Cortex]
 Cortex (Cerebral) [See Cerebral Cortex]
 Cortex (Motor) [See Motor Cortex]
 Cortex (Somatosensory) [See Somatosensory Cortex]
 Cortex (Visual) [See Visual Cortex]
 Cortical Evoked Potentials 11620, 11665, 11686
 Corticosteroids [See Hydrocortisone]
 Cortisol [See Hydrocortisone]
 Costs And Cost Analysis 12624, 13013, 13451, 13749
 Counselors [See Clients]
 Counseling (Group) [See Group Counseling]
 Counseling Psychology 12597
 Counseling [See Also Related Terms] 12620, 12751, 12754, 12919
 Counselor Attitudes 12632, 12878, 12931, 12971, 13005, 13401, 13402
 Counselor Characteristics 11317, 12630, 12632, 12650, 12653, 12855, 12858, 12860, 12865, 12866, 12878, 12882, 12883, 12884, 12903, 12911, 12931, 12974, 13005, 13537, 13587, 13615

BRIEF SUBJECT INDEX

- Counselor Client Interaction** [See Psychotherapeutic Processes]
- Counselor Education** 12865, 12874, 12878, 12882, 12883, 12884, 12885, 12887, 12891, 12894, 12903, 12909, 12910, 12911, 12923, 12931, 13412

Electroretinography 11613
Elementary Education 12034, 12975, 13021, 13338, 13347, 13439, 13588
Elementary School Students 11303, 11308, 11320, 11322, 11972, 11986, 12200, 12243, 12291, 12515, 12734, 12938, 12952, 12965, 12970, 12977, 12982, 12991, 13049, 13057, 13097, 13100, 13102, 13105, 13107, 13108, 13110, 13111, 13112, 13114, 13118, 13127, 13131, 13136, 13137, 13145, 13146, 13150, 13153, 13155, 13164, 13166, 13170, 13172, 13173, 13174, 13178, 13179, 13184, 13189, 13196, 13198, 13199, 13202, 13203, 13204, 13206, 13208, 13210, 13211, 13212, 13214, 13216, 13218, 13225, 13226, 13234, 13237, 13239, 13240, 13247, 13250, 13254, 13256, 13259, 13265, 13269, 13270, 13273, 13274, 13277, 13280, 13281, 13284, 13285, 13286, 13287, 13289, 13290, 13291, 13292, 13296, 13300, 13302, 13303, 13304, 13308, 13309, 13310, 13312, 13315, 13316, 13318, 13319, 13320, 13322, 13327, 13333, 13334, 13336, 13340, 13343, 13346, 13348, 13349, 13353, 13361, 13369, 13370, 13372, 13374, 13376, 13378, 13381, 13387, 13389, 13394, 13399, 13404, 13406, 13411, 13416, 13417, 13422, 13426, 13431, 13445, 13450, 13452, 13455, 13457, 13461, 13464, 13467, 13469, 13472, 13479, 13483, 13488, 13505, 13506, 13509, 13520, 13528, 13533, 13535, 13536, 13538, 13556, 13559, 13565, 13567, 13573, 13578, 13581, 13584, 13585, 13603, 13607, 13608, 13616, 13621, 13628
Elementary School Teachers 12952, 12970, 12979, 12980, 12981, 12982,

12984, 12986, 12987, 12991, 12998, 13000, 13001, 13027, 13028, 13032, 13033, 13038, 13053, 13054, 13057, 13060, 13064, 13070, 13076, 13079, 13086, 13088, 13098, 13109, 13184, 13205, 13281, 13302, 13361, 13372, 13381, 13422, 13450, 13452, 13483, 13484
Elementary Schools 13015, 13045, 13602
Emetic Drugs [See Apomorphine]
EMG (Electrophysiology) [See Electromyography]
Emotional Adjustment [See Also Coping Behavior] 12002, 12088, 12113, 12477, 12832, 13386, 13404, 13412, 13491, 13536, 13569, 13665
Emotional Content 11510, 11674, 11837, 11840, 12441, 12563
Emotional Control [See Coping Behavior]
Emotional Development 11892, 13394, 13514
Emotional Disorders [See Mental Disorders]
Emotional Instability 11672
Emotional Maladjustment [See Emotional Adjustment]
Emotional Maturity 12498, 13596
Emotional Responses [See Also Conditioned Emotional Responses] 11508, 11530, 11545, 11653, 11664, 12170, 12230, 12563
Emotional Stability 11672, 13709
Emotional States [See Also Alienation, Ambivalence, Depression (Emotion), Distress, Emotional Trauma, Fear, Involuntal Depression, Loneliness, Optimism, Pleasure, Restlessness] 11213, 11293, 11504, 11509, 11511, 11512, 11782, 11837, 12084, 12194, 12203, 12218, 12242, 12268, 12293, 12322, 12329, 12343, 12476, 12495, 13386, 13739
Emotional Trauma 12440
Emotionality (Personality) 12310, 12322
Emotionally Disturbed [See Also Autistic Children] 12404, 12435, 12656, 12706, 13462, 13471, 13496, 13549, 13610
Emotions [See Also Related Terms] 11451, 11837, 12343, 12963
Empathy 12035, 12203, 12235, 12569, 12623, 12858, 12881, 12883, 12897, 12910, 13183, 13209, 13371, 13673
Empirical Methods [See Also Observation Methods] 12152, 12461
Employability 13644
Employee Attitudes [See Also Job Satisfaction] 13664, 13681, 13685, 13692, 13693, 13694, 13715, 13722, 13730
Employee Benefits [See Employee Leave Benefits, Salaries]
Employee Leave Benefits 13638
Employee Motivation 11286, 13636, 13680, 13704, 13707, 13710, 13715, 13717, 13724
Employee Performance Appraisal [See Job Performance, Personnel Evaluation]
Employee Productivity 13632, 13696, 13699, 13702, 13704
Employee Selection [See Personnel Selection]
Employee Skills [See Also Clerical Secretarial Skills] 13674
Employee Turnover 13698, 13714
Employees [See Personnel]
Employment [See Occupations]
Employment Interviews [See Job Application Interviews]

BRIEF SUBJECT INDEX

- Employment Processes** [See Personnel Recruitment]
Employment Tests 13660
Encephalitis 12562
Encephalography [See Electroencephalography]
Encounter Group Therapy [See Also Marathon Group Therapy] 12692, 13521
Encounter Groups [See Sensitivity Training]
Endocrine Disorders [See Diabetes]
Endocrine Gland Surgery [See Castration, Male Castration, Ovariectomy, Pinealectomy]
Endocrine System 11642
Energy Expenditure 11344, 11405
Engineers 13667, 13693
England 12399, 12457, 12458
English (Nonstandard) [See Nonstandard English]
English Language [See Language]
Enjoyment [See Pleasure]
Enlisted Military Personnel 13723
Enrollment (School) [See School Enrollment]
Entrance Examinations 13523
Enuresis [See Urinary Incontinence]
Environment [See Also Academic Environment, Animal Environments, Classroom Environment, College Environment, Communes, Communities, Home Environment, Kibbutz, Neighborhoods, Poverty Areas, Rural Environments, School Environment, Social Environments, Suburban Environments, Towns, Urban Environments, Working Conditions] 12037, 13162
Environmental Effects [See Also Atmospheric Conditions, Cold Effects, Gravitational Effects, Noise Effects, Seasonal Variations, Temperature Effects] 11788, 13437
Environmental Stress 12403, 12798, 13735, 13737, 13740, 13744
Enzymes [See Decarboxylases, Hydroxylases, Monoamine Oxidases]
Epidemiology 11329, 12380, 12457, 12771, 12773, 13744
Epilepsy [See Also Epileptic Seizures, Grand Mal Epilepsy, Petit Mal Epilepsy] 12559, 12568, 12572, 12583, 12840
Epileptic Seizures 12559
Epinephrine 12813
Epistemology 11931
Equality (Social) [See Social Equality]
Equilibrium 12048
Equipment [See Apparatus]
Ergonomics [See Human Factors Engineering]
Error Analysis 11268, 11328, 11330
Errors 13311
Escape [See Avoidance]
Escape Behavior (Animal) [See Animal Escape Behavior]
Escape Conditioning 11546, 11793
Eserline [See Phystigmine]
Esophagus 12530
ESP (Parapsychology) [See Extrasensory Perception]
Esteem (Self) [See Self Esteem]
Estimation [See Also Time Estimation] 11268
Estradiol 11689, 11693, 11765
Estrogens [See Also Estradiol] 12729
Ethanol 11716, 11761, 11771, 11773, 11800, 11802
Ethics [See Also Personal Values, Professional Ethics, Social Values, Values] 13388
Ethnic Groups [See Also American Indians, Mexican Americans, Tribes] 11403, 11826, 11924, 12097, 12101, 12103, 12135, 12273, 12285, 12322, 12332, 12458, 12492, 12848, 13254, 13385, 13396, 13483, 13648
Ethnic Identity 12101, 12111, 12458, 12498, 13084, 13396
Ethnic Values 12049
Ethology (Animal) [See Animal Ethology]
Ethyl Alcohol [See Ethanol]
Etymology 12349, 12350, 12367, 12369, 12380, 12411, 12413, 12423, 12529, 12540, 12545, 12558, 12658
Eustachian Tube [See Middle Ear]
Evaluation [See Also Educational Program Evaluation, Mental Health Program Evaluation, Personnel Evaluation, Self Evaluation] 11501, 11511, 11836, 12244, 12316, 12636, 12873, 12954, 13039, 13073, 13281, 13362, 13391, 13417, 13438, 13483
Evaluation (Educational Program) [See Educational Program Evaluation]
Evaluation (Mental Health Program) [See Mental Health Program Evaluation]
Evaluation (Personnel) [See Personnel Evaluation]
Evaluation (Self) [See Self Evaluation]
Evaluation (Treatment Effectiveness) [See Treatment Effectiveness Evaluation]
Evoked Potentials [See Also Auditory Evoked Potentials, Cortical Evoked Potentials, Somatosensory Evoked Potentials, Visual Evoked Potentials] 11261, 11627, 11633, 11698, 12578
Evolution (Theory of) [See Theory of Evolution]
Exceptional Children (Gifted) [See Gifted]
Exceptional Children (Handicapped) [See Handicapped]
Executives [See Top Level Managers]
Exercise 11344, 11666
Exhaustion [See Fatigue]
Existential Therapy 2666
Existentialism 11236, 11870, 12327
Expectations 11497, 12040, 12053, 12224, 12243, 12244, 12331, 12613, 12993, 13325, 13391, 13425, 13445, 13452, 13476, 13531, 13631, 13638, 13680, 13712, 13715, 13730, 13746
Expectations (Role) [See Role Expectations]
Experience (Practice) [See Practice]
Experience Level (Job) [See Job Experience Level]
Experiences (Events) [See Also Early Experience, Life Experiences, Vicarious Experiences] 13332
Experiences (Life) [See Life Experiences]
Experiential Psychotherapy 12646, 13598
Experiment Controls 11252, 11260
Experiment Volunteers 1250, 12053
Experimental Apparatus [See Apparatus]
Experimental Design [See Also Follow-up Studies, Longitudinal Studies] 11220, 11246, 11247, 11264, 11327, 12063
Experimental Instructions 11465, 11537, 11657, 11679, 11960, 11977, 11987, 12236, 12252, 12303, 12539, 12697
Experimental Methods 11248, 11252, 11253, 11257, 11260, 11261, 11262, 11266, 11271, 11272, 11436, 12307, 12641, 12804
Experimental Replication 11297, 11357, 11516, 13213, 13429
Experimentation [See Also Related Terms] 11257, 12063, 12069, 12862, 12961, 13040
Experimenters 12652
Exploratory Behavior [See Also Animal Exploratory Behavior] 11861, 11905, 12028, 12034
Exposure Time (Stimulus) [See Stimulus Duration]
Expressions (Facial) [See Facial Expressions]
Extended Family 12087
External Ear 11753
Extinction (Learning) 11449, 11549, 11556, 11571, 11722, 12487, 12505
Extracurricular Activities [See Also Fraternity Membership, Sorority Membership] 13375
Extrasensory Perception [See Also Precognition, Psychokinesis] 11213, 11214, 11217, 11219, 11220
Extraversion 11302, 11351, 11356, 11522, 11672, 11674, 12239, 12291, 12298, 12299, 13225, 13269, 13297
Extrinsic Motivation 12243, 12313, 13659, 13729
Eye (Anatomy) [See Cones (Eye), Iris (Eye), Pupil (Eye), Retina]
Eye Contact 11825, 12210, 12227, 12252, 12645
Eye Movements 11353, 11354, 11369, 11375, 11386, 11527, 11541, 11679, 11974
Eyeblink Reflex 11340
Eyeid Conditioning 11474
Eysenck Personality Inventory 11655

F Test 11331, 11335
Face (Anatomy) 11495, 11623, 11872
Facial Expressions [See Also Smiles] 11512, 12242, 12272, 12507
Facial Muscles 11679
Facilitation (Social) [See Social Facilitation]
Factor Analysis [See Also Cluster Analysis] 11284, 11295, 11300, 11304, 11318, 11324, 11330, 11338, 12336, 12346, 12407, 13721
Factors (Sociocultural) [See Sociocultural Factors]
Factory Environments [See Working Conditions]
Faculty [See Educational Personnel]
Failure 11497, 11501, 11507, 12188, 12323, 13484
Faking 11280
Familiarity 11853, 13319
Family Background [See Also Family Socioeconomic Level, Parent Educational Background, Parental Occupation] 11368, 11874, 12119, 12183, 12421, 12437, 12454, 12457, 12478, 12481, 12506, 12513, 12555, 12651, 13304, 13396
Family Counseling [See Family Therapy]
Family Crises 12876
Family Life [See Family Relations]
Family Members [See Also Adopted Children, Adoptive Parents, Ancestors, Housewives, Mothers, Parents, Sons, Spouses, Twins, Unwed Mothers] 12129,

BRIEF SUBJECT INDEX

12139, 12376, 12388, 12444, 12569, 12590, 12827
Family Physicians 12594, 12871
Family Planning [See Also Birth Control, Vasectomy] 12056, 12141
Family Planning Attitudes 12013, 12120
Family Relations [See Also Childrearing Practices, Marital Conflict, Marital Relations, Mother Child Relations, Parent Child Relations, Parental Attitudes, Parental Role, Sibling Relations] 12126, 12129, 12131, 12139, 12163, 12357, 12360, 12451, 12465, 12658, 12754, 12834, 13326
Family Size 11926, 12141, 13646
Family Socioeconomic Level 11954, 13164, 13207
Family Structure [See Also Birth Order, Extended Family, Family Size, Nuclear Family, Parental Absence] 12123, 12129
Family Therapy 12121, 12655, 12658, 12661, 12662
Family [See Also Related Terms] 12090
Fantasies (Thought Disturbances) 12400
Fantasy (Defense Mechanism) 12329
Fatigue 11653, 13667
Fatty Acids [See Also Phosphatides] 11653
Fear 11504, 11530, 11595, 11841, 12196
Feeble-mindedness [See Mental Retardation]
Feedback [See Also Auditory Feedback, Biofeedback, Delayed Feedback, Knowledge of Results, Sensory Feedback, Visual Feedback] 11348, 11486, 11501, 11881, 11899, 11992, 12203, 12459, 12509, 12512, 12677, 12689, 12704, 12764, 12845, 12903, 12909, 12910, 13020, 13044, 13060, 13091, 13175, 13224, 13264, 13320, 13392, 13405, 13481, 13511
Feeding Behavior (Animal) [See Animal Feeding Behavior]
Feelings [See Emotions]
Felonies [See Crime]
Female Animals 11591, 11765
Female Criminals 12493, 12813
Female Delinquents 12345, 12467, 12471, 12805
Females (Human) [See Human Females]

BRIEF SUBJECT INDEX

- Gross Motor Skill Learning** 11248, 11348, 11911, 12512, 13111, 13190
- Group Behavior** [See Collective Behavior]
- Group Cohesion** 12111, 12206, 12939, 13699
- Group Counseling** 12911, 13183, 13594, 13598, 13621
- Group Discussion** 12208, 12214, 12220, 12222, 12223, 12517, 12642, 12884, 12911, 13044, 13103, 13174, 13212, 13241
- Group Dynamics** [See Also Group Cohesion, Group Discussion, Group Participation, Group Performance, Group Structure] 12204, 12215, 12226, 12228, 12264, 12266, 12664, 12672, 12869, 12951, 13048, 13056, 13093, 13167, 13231, 13314, 13368, 13395, 13432, 13437, 13454, 13710
- Group Instruction** 13248
- Group Participation** 11907, 12075, 12092, 12214, 12674, 12675, 13103, 13146, 13241, 13538, 13630
- Group Performance** 12204, 12213, 12224, 12229, 13122, 13725
- Group Problem Solving** 13220
- Group Psychotherapy** [See Also Encounter Group Therapy, Marathon Group Therapy, Therapeutic Community] 12642, 12656, 12659, 12660, 12664, 12665, 12666, 12672, 12808, 12826, 12833
- Group Structure** 12087, 12217, 12221, 12224, 12229, 12254, 12669, 12679, 12891, 13118, 13710
- Group Testing** 11322, 11864, 13270, 13578, 13603
- Group Therapy** [See Group Psychotherapy]
- Groups (Ethnic)** [See Ethnic Groups]
- Groups (Organizations)** [See Organizations]
- Groups (Statistics)** [See Population (Statistics)]
- GSR (Electrophysiology)** [See Galvanic Skin Response]
- Guessing** 11274
- Guidance (Educational)** [See Educational Counseling]
- Guidance (Occupational)** [See Occupational Guidance]
- Guilt** 12304, 12336, 12340
- Guinea Pigs** 11625, 11819
- Gustatory Perception** [See Taste Perception]
- Habitat Selection** [See Territoriality]
- Habits** [See Thumbsucking, Tobacco Smoking]
- Habituation** 11535, 11633, 11644, 11668, 11927
- Halfway Houses** 12764, 12815, 12817, 12831
- Hallucinations** [See Also Auditory Hallucinations, Visual Hallucinations] 11518, 11523
- Hallucinogenic Drugs** [See Also Mescaline, Psilocybin] 13232
- Hallucinations** [See Delirium Tremens, Korsakoffs Psychosis]
- Haloperidol** 11799
- Hamsters** 11531, 11591
- Hand (Anatomy)** 11350
- Handedness** [See Lateral Dominance]
- Handicapped** [See Also Amputees, Aurally Handicapped, Autistic Children, Blind, Brain Damaged, Deaf, Educable Mentally Retarded, Emotionally Disturbed, Idiot Savants, Institutionalized Mentally Retarded, Mentally Retarded, Multiply Handicapped, Partially Hearing Impaired, Physically Handicapped, Profoundly Mentally Retarded, Severely Mentally Retarded, Slow Learners, Trainable Mentally Retarded, Visually Handicapped] 12360, 12552, 13619
- Handicapped (Attitudes Toward)** [See Also Mental Illness (Attitudes Toward), Mental Retardation (Attit Toward)] 12579, 13031
- Handwriting** 11717
- Happiness** 12081
- Hawaii** 12101
- Head (Anatomy)** 11586
- Head Injuries** 12556
- Head Start** [See Project Head Start]
- Health** [See Also Community Mental Health, Mental Health] 11893, 11910, 11941, 12084, 12091, 12097, 12497, 12743, 12904
- Health Education** [See Also Drug Education, Sex Education] 12551, 13096
- Health Insurance** 12898
- Hearing Impaired (Partially)** [See Partially Hearing Impaired]
- Hearing Measures** [See Speech And Hearing Measures]
- Heart Rate** 11560, 11638, 11639, 11660, 11663, 11664, 11665, 11666, 11667, 11668, 11669, 11671, 11676, 11679, 12466, 12487, 12495, 12813
- Heart Rate Affecting Drugs** [See Caffeine, Epinephrine, Theophylline]
- Heart Surgery** 12542
- Heart Transplants** [See Organ Transplantation]
- Heartbeat** [See Heart Rate]
- Hebephrenic Schizophrenia** 12430
- Height (Body)** [See Body Height]
- Helium** 11703
- Hematoma** 12586
- Hemodialysis** 12569, 12749
- Hemorrhage** [See Hematoma]
- Hemp (Cannabis)** [See Cannabis]
- Hepatic Disorders** [See Liver Disorders]
- Heredity** [See Genetics]
- Heroin Addiction** 12470, 12487, 12829, 12838
- Heterosexuality** 12899
- Hibernation** 11647
- Hidden Figures Test** 11362, 13682
- High School Diplomas** [See Educational Degrees]
- High School Students** 11293, 11310, 12305, 12698, 12909, 12933, 12942, 12959, 12960, 12969, 12993, 13036, 13055, 13075, 13104, 13122, 13135, 13137, 13139, 13144, 13168, 13191, 13192, 13228, 13232, 13233, 13238, 13243, 13262, 13266, 13291, 13306, 13311, 13314, 13317, 13323, 13326, 13332, 13334, 13345, 13351, 13360, 13363, 13367, 13375, 13380, 13382, 13396, 13401, 13405, 13407, 13408, 13409, 13429, 13436, 13440, 13444, 13449, 13454, 13466, 13482, 13522, 13537, 13539, 13547, 13552, 13559, 13567, 13568, 13595, 13601, 13604, 13624, 13625, 13648, 13650
- High School Teachers** 12099, 12698, 12933, 12942, 12959, 12960, 12984, 12986, 12993, 12998, 13007, 13026, 13029, 13036, 13043, 13055, 13063, 13064, 13071, 13075, 13079, 13086, 13088, 13205, 13232, 13262, 13351, 13390, 13405, 13409, 13449, 13542
- High Schools** 12944, 13015, 13586
- Higher Education** [See Also Clinical Psychology Grad Training, Clinical Psychology Internship, Graduate Education, Graduate Psychology Education, Medical Education, Medical Residency, Postgraduate Training, Psychiatric Training] 12905, 12943, 13087, 13261
- Hippies** [See Subculture (Anthropological)]
- Hippocampus** [See Also Amygdaloid Body] 11634, 11707, 11711, 11713, 11714, 11719, 11740, 11742, 11805, 11807, 11823
- Hiring** [See Personnel Selection]
- Histology** 11259, 11769

BRIEF SUBJECT INDEX

- Insight** 12694
Insight Therapy 12605, 12839
Instability (Emotional) [See Emotional Instability]
Instinctive Behavior (Animal) [See Animal Instinctive Behavior]
Institutionalization [See Commitment (Psychiatric), Hospital Admission, Hospital Discharge, Hospitalization, Incarceration, Psychiatric Hospital Admission, Psychiatric Hospital Readmission, Psychiatric Hospitalization]
Institutionalized Mentally Retarded 12507, 12512, 12701, 13494, 13501
Institutions (Correctional) [See Correctional Institutions]
Institutions (Residential Care) [See Residential Care Institutions]
Instruction [See Teaching]
Instruction (Computer Assisted) [See Computer Assisted Instruction]
Instruction (Individualized) [See Individualized Instruction]
Instruction (Programed) [See Programed Instruction]
Instructional Media [See Also Educational Audiovisual Aids, Motion Pictures (Educational), Programed Textbooks, Reading Materials] 11608, 13065, 13120, 13134, 13176, 13194, 13248, 13493
Instructions (Experimental) [See Experimental Instructions]
Instructors [See Teachers]
Instrumental Conditioning [See Operant Conditioning]
Instrumental Learning [See Operant Conditioning]
Insurance [See Also Health Insurance] 12900, 12927
Insurance Agents [See Sales Personnel]
Integration (Racial) [See Racial Integration]
Intellectual Development [See Also Language Development] 11875, 11926, 11930, 11935, 11961, 11980, 11986, 12631, 13257, 13348, 13531
Intellectually Gifted [See Gifted]
Intelligence 11338, 11448, 11610, 11883, 11893, 11926, 11961, 11970, 12002, 12019, 12296, 12307, 12312, 12498, 12506, 12693, 13050, 13104, 13212, 13344, 13507, 13568, 13620, 13674
Intelligence Measures [See Also Hidden Figures Test, Illinois Test Psycholinguist Abil, Kohs Block Design Test, Lorge Thorndike Intelligence Test, Peabody Picture Vocabulary Test, Raven Coloured Progressive Matrices, Ravens Progressive Matrices, Stanford Binet Intelligence Scale, Wechsler Adult Intelligence Scale, Wechsler Intelligence Scale Children] 11290, 11311, 11423, 11930, 12103, 13345, 13532, 13568, 13578, 13608, 13620, 13628
Intelligence Quotient 11863, 12472
Intelligence Scales [See Intelligence Measures]
Intensity (Stimulus) [See Stimulus Intensity]
Intentional Learning 11425
Interaction (Interpersonal) [See Interpersonal Interaction]
Interaction (Social) [See Social Interaction]
Intercourse (Sexual) [See Sexual Intercourse (Human)]
Interdisciplinary Treatment Approach 12602
Interest Patterns 13411
Interests [See Also Occupational Interests] 12478, 13172, 13192, 13531, 13566
Interference (Learning) [See Also Proactive Inhibition, Retroactive Inhibition] 11364, 11380, 11439, 11446, 11457, 11468, 11471, 11780
Intermittent Reinforcement [See Reinforcement Schedules]
Internal External Locus of Control 11286, 11339, 11483, 11678, 12003, 12019, 12056, 12092, 12134, 12161, 12177, 12190, 12251, 12278, 12300, 12303, 12316, 12331, 12335, 12785, 12956, 13033, 13129, 13179, 13196, 13250, 13279, 13292, 13354, 13357, 13417, 13427, 13644, 13650, 13714
International Relations 12094
Interpersonal Attraction 12066, 12211, 12215, 12251, 12260, 12263, 12268, 12272, 12275, 12630, 12636, 13662, 13692
Interpersonal Communication [See Also Bargaining, Conversation, Eye Contact, Group Discussion, Interviewing, Job Applicant Interviews, Negotiation, Parent Child Communication, Psychodiagnostic Interview] 11843, 11867, 12007, 12126, 12205, 12216, 12223, 12254, 12257, 12651, 12675, 12704, 12801, 13073, 13108
Interpersonal Compatibility 13461
Interpersonal Influences 11504, 12144, 12177, 12192, 12206, 12212, 12250, 12253, 12269, 12274, 12462, 13355, 13441, 13700
Interpersonal Interaction [See Also Assistance (Social Behavior), Bargaining, Collective Behavior, Conflict, Conversation, Cooperation, Eye Contact, Friendship, Group Discussion, Group Participation, Group Performance, Interpersonal Attraction, Interpersonal Communication, Interpersonal Compatibility, Interpersonal Influences, Interviewing, Job Applicant Interviews, Negotiation, Participation, Peer Relations, Persecution, Psychodiagnostic Interview, Social Dating, Violence, War] 11275, 11673, 12027, 12028, 12086, 12101, 12111, 12114, 12129, 12170, 12190, 12199, 12200, 12202, 12207, 12209, 12213, 12214, 12221, 12226, 12237, 12242, 12259, 12261, 12277, 12306, 12423, 12494, 12498, 12613, 12646, 12672, 12714, 12788, 12888, 12891, 12896, 12973, 12977, 13054, 13062, 13252, 13360, 13442, 13599, 13602, 13603, 13618, 13646, 13663, 13673, 13686, 13712
Interpersonal Perception [See Social Perception]
Interpretation (Psychoanalytic) [See Psychoanalytic Interpretation]
Interresponse Time 11567, 11758
Interstimulus Interval 11374, 11399, 11437, 11542, 11544, 11581, 11999, 12538
Interval Interval 11439, 11572, 11581
Interval Reinforcement [See Fixed Interval Reinforcement, Variable Interval Reinforcement]
Interviewing 11849, 12186, 12199, 12644, 13672
Interviews [See Job Applicant Interviews, Psychodiagnostic Interview]
Intimacy 12138, 12210, 12227, 12613
Intoxication [See Toxic Disorders]
Intoxication (Alcohol) [See Alcohol Intoxication]
Intrinsic Motivation 11500, 11511, 12243, 12313, 13659, 13729
Introjection 12341
Introspection 11495
Introversion 11302, 11351, 11522, 11672, 11674, 12239, 12291, 12299, 12325, 13269
Inventories [See Biographical Inventories]
Inventories (Attitude) [See Attitude Measures]
Inventories (Personality) [See Personality Measures]
Invertebrates [See Also Arachnida, Arthropoda, Beetles, Drosophila, Echinodermata, Insects, Mollusca] 11547
Investigation [See Experimentation]
Involutional Depression 12434
Involvement 12196, 13407, 13676
Ions [See Electrolytes]
Iran 13338
Iris (Eye) 12310
Isolation (Social) [See Social Isolation]
Isoproterenol 11772

Phenoxybenzamine 11798
Philippines 12071, 13528
Philosophies [See Also Animism, Epistemology, Existentialism, Humanism, Logic (Philosophy), Materialism] 11221, 11224, 11225, 11226, 11227, 11228, 11231, 11232, 11233, 11237, 11238, 11241, 11243, 11245, 11838, 11882, 12327, 12597, 12619, 12987, 13246
Phobias [See Also Ophidiophobia, School Phobia] 12409
Phonemes [See Also Consonants, Vowels] 11403, 11956
Phonetics [See Also Consonants, Morphemes, Phonemes, Vowels, Words (Phonetic Units)] 11465
Phonics 13201, 13577
Phonology 11418, 11957
Phosphatides 12562
Phospholipids [See Phosphatides]
Photoc Threshold [See Illumination, Visual Thresholds]
Photoreceptors [See Cones (Eye)]
Physical Agility [See Physical Dexterity]
Physical Attractiveness 12249, 12312, 13372
Physical Development [See Also Motor Development, Prenatal Development, Speech Development] 11385, 11770, 11894, 11911, 12575, 12589
Physical Dexterity 13507
Physical Divisions (Geographic) [See Geography]
Physical Education 13014, 13074, 13083, 13096, 13111, 13131, 13169, 13177, 13190, 13250, 13267, 13419, 13458, 13459
Physical Exercise [See Exercise]
Physical Fitness 11344, 12552, 13169, 13197
Physical Geography [See Geography]

BRIEF SUBJECT INDEX

- Physical Growth** [See Physical Development]
- Physical Strength** 13190
- Physical Treatment Methods** [See Castration, Heart Surgery, Hemodialysis, Induced Abortion, Male Castration, Medical Treatment (General), Neurosurgery, Organ Transplantation, Ovariectomy, Pinelectomy, Psychosurgery, Surgery, Vagotomy]
- Physically Handicapped** [See Also Amputees] 12811, 12814
- Physically Ill Patients** [See Patients]
- Physicians** [See Also Family Physicians, General Practitioners, Psychiatrists] 12872, 12907
- Physics** 13344, 13408
- Physiological Aging** 11693, 11870, 11877, 11888, 11893, 11902, 11915, 12083
- Physiological Arousal** 11742, 11773, 12237, 12241, 12276, 12300, 12424, 12476, 12495
- Physiological Correlates** 11653, 11659, 11665
- Physiological Stress** 11692, 11704
- Physique** [See Also Body Height, Body Weight, Obesity] 12249, 13419
- Physoestrogens** 11785
- Piaget (Jean)** 11241, 11882, 11917, 11931, 11935, 11961, 11971, 11980, 11990, 12410, 12965, 13104
- Piagetian Tasks** 11864, 11913, 11929
- Pigeons** 11258, 11526, 11560, 11561, 11562, 11567, 11573, 11575, 11577, 11580, 11786
- Pilots (Aircraft)** [See Aircraft Pilots]
- Pinelectomy** 11738
- Pitch (Frequency)** [See Also Speech Pitch, Ultrasound] 11255, 11413
- Pitch Discrimination** 11413, 11665
- Pitch Perception** [See Also Pitch Discrimination] 11405
- Planning (Management)** [See Management Planning]
- Plasma (Blood)** [See Blood Plasma]
- Play (See Recreation)**
- Play Development (Childhood)** [See Childhood Play Development]
- Play Therapy** 12615
- Pleasure** 11512
- Plethysmography** 11644, 11667, 11668
- Poetry** 11981, 12609, 13173
- Poisoning** [See Toxic Disorders]
- Poisons** 11696
- Police Personnel** 12045, 12139, 12145, 13682
- Policy Making (Government)** [See Government Policy Making]
- Political Attitudes** 12177, 12016, 12047, 12052, 12143, 12146, 12152, 12153, 13075, 13374
- Political Candidates** 12144, 12153
- Political Divisions (Geographic)** [See Geography]
- Political Economic Systems** [See Also Communism, Socialism] 12042, 12048
- Political Elections** 12144
- Political Issues** 12144, 12153
- Political Parties** 12147
- Political Processes** [See Also Political Elections, Voting Behavior] 11848, 12064, 12893
- Politics** [See Also Political Attitudes, Political Candidates, Political Elections, Political Issues, Political Parties, Political Processes, Voting Behavior] 11221, 12094, 13454, 13738
- Pollution** 13734
- Popularity** [See Social Approval]
- Population** [See Overpopulation, Population (Statistics)]
- Population (Statistics)** 11329, 11331, 12044, 12050
- Population Characteristics** [See Demographic Characteristics]
- Population Control** [See Birth Control]
- Population Genetics** 12046
- Positive Reinforcement** [See Also Praise] 11890, 13150
- Positive Transfer** 12518
- Postgraduate Training** [See Also Clinical Psychology Grad Training, Clinical Psychology Internship, Medical Residency] 12914
- Postnatal Period** 11704, 11769
- Posttreatment Followup** 12395, 12817
- Posture** 12272, 12626, 12695, 13307
- Potassium** 11682
- Potentials (Evoked)** [See Evoked Potentials]
- Poverty** 11867, 13157
- Poverty Areas** 12086, 12667
- Power** 11287, 11504, 12026, 12092, 12192, 12201, 12218, 12225, 12952, 13706
- Practice** [See Also Distributed Practice, Massed Practice] 11400, 11444, 11470, 11492, 11493, 11993, 12303, 13145, 13259, 13630
- Practice Effects** 11465, 11902, 11992, 13318
- Praise** 11505, 11890, 12292, 12389, 12698, 13035, 13166, 13417
- Precognition** 11213
- Predictability (Measurement)** 12525
- Prediction** [See Also Occupational Success Prediction] 12108, 12212, 12515, 12824, 13267, 13528, 13649
- Predictive Validity** 11286, 11298, 11309, 11605, 12231, 12467, 12836, 12838, 13518, 13526, 13533, 13571, 13577, 13607
- Predisposition** 13536, 13756
- Preference Measures** [See Least Preferred Coworker Scale]
- Preferences** [See Also Aesthetic Preferences, Food Preferences, Occupational Preference] 11397, 11545, 11732, 11842, 12373, 13201, 13233, 13267, 13273, 13450
- Pregnancy** 11273, 11591, 11770, 12122, 12135, 12348, 13063, 13575
- Prehension** [See Motor Development]
- Prejudice** [See Also Religious Prejudices] 12207, 12265, 12312, 12853, 13340, 13490
- Premature Birth** 11899
- Prenatal Development** 11643, 11769, 11863
- Preschool Age Children** 11291, 11304, 11465, 11484, 11764, 11847, 11863, 11875, 11879, 11880, 11887, 11890, 11896, 11897, 11901, 11905, 11907, 11908, 11911, 11912, 11916, 11923, 11930, 11938, 11940, 11941, 11942, 11943, 11945, 11946, 11947, 11948, 11951, 11954, 11955, 11959, 11964, 11966, 11967, 11968, 11970, 11973, 11976, 11978, 11985, 11987, 11988, 11989, 11990, 11993, 11994, 11996, 11997, 11998, 12000, 12002, 12003, 12005, 12006, 12009, 12012, 12022, 12023, 12027, 12028, 12033, 12037, 12038, 12040, 12117, 12400, 12425, 12450, 12502, 12526, 12631, 12637, 12689, 12740, 12743, 13141, 13143, 13195, 13215, 13257, 13264, 13346, 13465, 13582, 13588, 13611, 13629
- Preschool Education** 12034, 13143, 13204, 13207, 13218, 13221, 13287, 13398, 13611, 13626, 13629
- Presenile Dementia** 12545
- Presentation Methods** [See Stimulus Presentation Methods]
- Presentation Modes** [See Stimulus Presentation Methods]
- Pressoreceptors** [See Baroreceptors]
- Pressure (Barometric)** [See Atmospheric Conditions]
- Pressure (Blood)** [See Blood Pressure]
- Prevention** [See Also Related Terms] 13249
- Preventive Medicine** 12753
- Primacy Effect** 11458, 11473, 12239, 12262
- Primary Mental Health Prevention** 12176, 12524, 12766
- Primary Reinforcement** 13141
- Primary Schools** [See Elementary Schools]
- Primates (Nonhuman)** [See Also Monkeys] 11540

 Psychotherapeutic Processes [See Also Countertransference] 11234, 12225, 12608, 12614, 12616, 12617, 12618, 12632, 12634, 12636, 12639, 12644, 12646, 12648, 12650, 12651, 12653, 12666, 12672, 12702, 12788, 12881, 12883, 12897, 12903, 13564

BRIEF SUBJECT INDEX

- Psychotherapeutic Techniques** [See Also Autogenic Training, Dream Analysis, Psychodrama] 11234, 12385, 12428, 12572, 12607, 12609, 12616, 12621, 12625, 12632, 12645, 12647, 12787, 12827, 12903
- Psychotherapists** [See Also Psychoanalysts] 12648, 12881, 12896
- Psychotherapy** [See Also Analytical Psychotherapy, Brief Psychotherapy, Child Psychotherapy, Client Centered Therapy, Dream Analysis, Encounter Group Therapy, Existential Therapy, Experiential Psychotherapy, Family Therapy, Geriatric Psychotherapy, Gestalt Therapy, Group Psychotherapy, Hypnotherapy, Individual Psychotherapy, Insight Therapy, Marathon Group Therapy, Play Therapy, Psychoanalysis, Psychodrama, Psychotherapeutic Counseling, Therapeutic Community, Transactional Analysis] 12396, 12592, 12596, 12606, 12608, 12610, 12612, 12619, 12624, 12626, 12627, 12634, 12641, 12652, 12752, 12853
- Psychotherapy Training** 12627, 12896, 12924
- Psychotic Episode (Acute)** [See Acute Psychotic Episode]
- Psychotomimetic Drugs** [See Mescaline]
- Public Attitudes** [See Public Opinion]
- Public Health Services** 12743, 12780
- Public Opinion** 12062, 12152, 12185, 12976
- Public School Education** 12939, 13043, 13326
- Public Speaking** 11506, 11836, 12680
- Pulse (Arterial)** [See Arterial Pulse]
- Punishment** 11522, 11646, 12269, 12487, 12698, 12708, 13311
- Pupil (Eye)** 11343
- Pupil Dilation** 11343, 11349, 11386, 11452, 11641, 11661, 11674
- Purdue Perceptual Motor Survey** 13502, 13525
- Pursuit (Rotary)** [See Rotary Pursuit]
- Questionnaires** 11503, 13643
- Questionnaires (Attitude)** [See Attitude Measures]
- Questionnaires (Opinion)** [See Attitude Measures]
- Questionnaires (Personality)** [See Personality Measures]
- Quinine** 11352
- Quinine Sulfate** [See Quinine]
- Rabbits** 11542, 11634, 11643, 11741, 11748, 11785
- Race (Anthropological)** [See Also Caucasians, Negroes] 12267, 13100
- Race Attitudes** [See Also Antisemitism, Racism] 12032, 12265, 12956, 12996, 13084, 13090, 13124, 13128, 13365, 13375, 13410, 13490
- Racial Differences** 11341, 11445, 11834, 11872, 11901, 11924, 12092, 12110, 12112, 12155, 12200, 12816, 12848, 12933, 13107, 13132, 13270, 13284, 13304, 13322, 13353, 13369, 13385, 13449, 13644, 13714, 13743
- Racial Discrimination** 13662
- Racial Integration** [See Also School Integration (Racial)] 12104, 13124, 13348
- Racial Segregation (Schools)** [See School Integration (Racial)]
- Racism** 12099
- Rapid Eye Movement Dreams** [See REM Dreams]
- Rapid Eye Movement Sleep** [See REM Sleep]
- Rapport** [See Interpersonal Attraction]
- Rat Learning** 11576, 11713, 11714, 11720, 11722, 11731
- Rating** 11264
- Rating Scales** 11316, 11912, 12353, 13557, 13609
- Ratio Reinforcement** [See Fixed Ratio Reinforcement]
- Ratiocination** [See Logical Thinking]
- Rats** 11532, 11544, 11546, 11549, 11551, 11557, 11563, 11564, 11565, 11566, 11569, 11571, 11578, 11582, 11585, 11587, 11594, 11596, 11600, 11621, 11636, 11645, 11646, 11647, 11648, 11649, 11681, 11682, 11683, 11686, 11688, 11689, 11690, 11691, 11692, 11693, 11696, 11697, 11699, 11700, 11702, 11703, 11704, 11709, 11710, 11711, 11713, 11714, 11716, 11720, 11721, 11722, 11723, 11724, 11725, 11728, 11730, 11731, 11732, 11734, 11736, 11737, 11740, 11742, 11743, 11744, 11746, 11750, 11754, 11758, 11761, 11763, 11765, 11765, 11766, 11767, 11769, 11770, 11772, 11774, 11775, 11776, 11778, 11781, 11783, 11784, 11788, 11789, 11790, 11791, 11792, 11793, 11794, 11795, 11797, 11798, 11799, 11800, 11804, 11805, 11807, 11808, 11809, 11810, 11811, 11812, 11813, 11817, 11818, 11822, 11823
- Raven Coloured Progressive Matrices** 12511, 12541
- Ravens Progressive Matrices** 11319
- Reaction (Drugs)** [See Drug Adverse Reactions]
- Reaction Time** 11341, 11346, 11359, 11378, 11393, 11408, 11429, 11443, 11552, 11663, 11680, 11966, 12371, 13164
- Reactions To Crisis** [See Stress Reactions]
- Reactive Schizophrenia** [See Schizophrenia]
- Readaptation** [See Adaptation]
- Readiness (Reading)** [See Reading Readiness]
- Readiness (School)** [See School Readiness]
- Reading** [See Also Oral Reading, Remedial Reading, Silent Reading] 11351, 11418, 11951, 12158, 12734, 13172, 13407
- Reading Ability** 11360, 11831, 11981, 13106, 13125, 13132, 13142, 13145, 13274, 13277, 13300, 13301, 13317, 13318, 13408, 13466, 13467, 13502, 13513, 13524
- Reading Achievement** 11322, 13097, 13105, 13136, 13153, 13164, 13201, 13204, 13212, 13302, 13307, 13312, 13321, 13322, 13333, 13336, 13340, 13349, 13354, 13466, 13467, 13475, 13491, 13495, 13498, 13505, 13509, 13520, 13533, 13535, 13577
- Reading Comprehension** 11410, 11831, 12511, 13106, 13137, 13182, 13212, 13230, 13234, 13239, 13247, 13269, 13296, 13340, 13343, 13378, 13472, 13479, 13499
- Reading Disabilities** [See Also Dyslexia] 12523, 12524, 13318, 13467, 13472, 13502, 13573
- Reading Education** 13038, 13105, 13145, 13148, 13215, 13225, 13230, 13234, 13239, 13251, 13258, 13268, 13315, 13467
- Reading Materials** 11831, 12166, 12945, 12953, 13002, 13100, 13106, 13109, 13132, 13135, 13140, 13153, 13172, 13290, 13316, 13343, 13524, 13545
- Reading Measures** 13565
- Reading Readiness** 11917, 11970, 13215, 13221, 13268, 13477, 13520
- Reading Skills** 11428, 11985, 13237, 13258, 13268, 13296, 13303, 13378, 13463, 13479
- Reading Speed** 13230
- Readjustment (Psychosocial)** [See Psychosocial Readjustment]
- Readmission (Hospital)** [See Hospital Admission]
- Readmission (Psychiatric Hospital)** [See Psychiatric Hospital Readmission]
- Reasoning** [See Also Inductive Deductive Reasoning, Inference] 11433, 11922, 11972, 11994, 13104, 13339
- Rebutal** [See Professional Criticism Reply]
- Recall (Dreams)** [See Dream Recall]
- Recall (Learning)** [See Also Free Recall] 11339, 11407, 11441, 11455, 11456, 11457, 11462, 11467, 11472, 11480, 11482, 11487, 11492, 11494, 11508, 11520, 11850, 11960, 11996, 11997, 12291, 13100
- Recency Effect** 11458, 12262
- Receptors (Neural)** [See Neural Receptors]
- Recidivism** 12467, 12484, 12796, 12807, 12819
- Reciprocity** 12093, 12238, 12276
- Recognition (Learning)** 11360, 11381, 11432, 11456, 11471, 11482, 11872, 11951, 11968, 11985, 13135, 13251, 13308, 13315, 13346
- Reconstruction (Learning)** 11460, 11461
- Reconstructive Psychotherapy** [See Psychotherapy]
- Recorders (Tape)** [See Tape Recorders]
- Recovery (Disorders)** 11855, 12566
- Recreation** [See Also Athletic Participation, Basketball, Childrens Recreational Games, Dance, Football, Sports, Summer Camps (Recreation), Swimming, Television Viewing] 11484, 12117, 13062, 13162, 13169, 13179, 13183, 13368
- Recreation Areas** 13749
- Recreation Therapy** [See Art Therapy]
- Recreational Day Camps** [See Summer Camps (Recreation)]
- Recruitment (Personnel)** [See Personnel Recruitment]
- Recruitment (Teachers)** [See Teacher Recruitment]
- Red Nucleus** [See Mesencephalon]
- Referral (Professional)** [See Professional Referral]
- Reflex (Conditioned)** [See Conditioned Responses]
- Reflexes** [See Also Acoustic Reflex, Eyeblink Reflex, Orienting Reflex, Startle Reflex] 11641, 11894
- Regression Analysis** [See Analysis of Variance]

BRIEF SUBJECT INDEX

- Rehabilitation** [See Also Drug Rehabilitation, Psychosocial Rehabilitation, Vocational Rehabilitation] 12630, 12659, 12793, 12802, 12804, 12860
- Rehabilitation (Drug)** [See Drug Rehabilitation]
- Rehabilitation (Psychosocial)** [See Psychosocial Rehabilitation]
- Rehabilitation (Vocational)** [See Vocational Rehabilitation]
- Rehabilitation Centers** 12859
- Reinforcement** [See Also Differential Reinforcement, Fixed Interval Reinforcement, Fixed Ratio Reinforcement, Monetary Rewards, Negative Reinforcement, Positive Reinforcement, Praise, Primary Reinforcement, Punishment, Reinforcement Amounts, Reinforcement Schedules, Rewards, Secondary Reinforcement, Self Reinforcement, Social Reinforcement, Variable Interval Reinforcement, Verbal Reinforcement] 11478, 11568, 11614, 12186, 12710, 13634
- Reinforcement (Vicarious)** [See Vicarious Experiences]
- Reinforcement Amounts** 11449, 11724
- Reinforcement Schedules** [See Also Fixed Interval Reinforcement, Fixed Ratio Reinforcement, Variable Interval Reinforcement] 11546, 11549, 11550, 11555, 11558, 11561, 11563, 11565, 11567, 11568, 11571, 11572, 11573, 11575, 11578, 11580, 11720, 11812, 12708, 13159, 13256, 13506
- Relations (International)** [See International Relations]
- Relations (Peer)** [See Peer Relations]
- Relaxation** 11651, 13529
- Relaxation Therapy** [See Systematic Desensitization Therapy]
- Relearning** 11749
- Reliability (Statistical)** [See Statistical Reliability]
- Reliability (Test)** [See Test Reliability]
- Religiosity** 12105, 12106
- Religious Affiliation** [See Also Christianity, Judaism, Protestantism, Roman Catholicism, Zen Buddhism] 12100, 12208, 13440
- Religious Beliefs** [See Also Christianity, Judaism, Protestantism, Religiosity, Religious Affiliation, Roman Catholicism, Zen Buddhism] 12047, 12100, 12106, 12108, 12109, 12135, 12163
- Religious Education** 13144, 13224, 13238, 13331, 13436
- Religious Literature** [See Bible]
- Religious Personnel** [See Also Clergy, Lay Religious Personnel] 12108
- Religious Practices** [See Also Meditation] 11860, 12106
- Religious Prejudices** 12099
- REM Dreams** 11518
- REM Sleep** 11514, 11634, 11647, 11654, 11668, 11694, 11715
- Remedial Reading** 13466, 13467, 13468, 13478, 13479, 13480, 13491, 13495, 13505, 13509, 13595
- Remembering** [See Retention]
- Remission (Disorders)** [See Also Spontaneous Remission] 12575
- Repairmen** [See Technical Service Personnel]
- Reply (To Professional Criticism)** [See Professional Criticism Reply]
- Repression Sensitization** 12284, 12644
- Reptiles** [See Also Turtles] 11529
- Republican Party** [See Political Parties]
- Research** [See Experimentation]
- Research Design** [See Experimental Design]
- Research Methods** [See Methodology]
- Resentment** [See Hostility]
- Reserpine** 12724
- Residence Halls** [See Dormitories]
- Residency (Medical)** [See Medical Residency]
- Residential Care Institutions** [See Also Halfway Houses, Hospitals, Nursing Homes, Psychiatric Hospitals] 12784, 12788, 12794, 13459
- Resistance (Skin)** [See Skin Resistance]
- Resocialization (Psychosocial)** [See Psychosocial Resocialization]
- Respiration** 11638, 11639, 11644, 11657, 11671, 11679, 11703, 11888, 12495, 12739
- Respiration Stimulating Drugs** [See Caffeine]
- Respondent Conditioning** [See Classical Conditioning]
- Response Bias** 12591
- Response Duration** 11546, 11573
- Response Frequency** 11503, 11555, 11558
- Response Generalization** 12502, 12509, 13213
- Response Lag** [See Reaction Time]
- Response Latency** 11434, 11552, 12212, 12240, 12304, 12371
- Response Parameters** [See Also Interresponse Time, Reaction Time, Response Duration, Response Frequency, Response Generalization, Response Latency, Response Probability, Response Set, Response Variability] 12671
- Response Probability** 13634
- Response Set** 11276, 11420, 11883, 12273, 12591
- Response Speed** [See Reaction Time]
- Response Time** [See Reaction Time]
- Response Variability** 11361
- Responses** [See Conditioned Emotional Responses, Conditioned Responses, Conditioned Suppression, Emotional Responses, Orienting Responses]
- Responsibility** 11499, 12155, 12233, 13025, 13692
- Restlessness** 11517
- Retaliation** [See Reciprocity]
- Retardation (Mental)** [See Mental Retardation]
- Retarded (Mentally)** [See Mentally Retarded]
- Retention** [See Also Recall (Learning), Recognition (Learning), Reconstruction (Learning)] 11355, 11448, 11465, 11490, 11576, 11711, 11744, 11902, 11950, 13032, 13129, 13166, 13177, 13247, 13274, 13288, 13329, 13380, 13517
- Retention Measures** [See Also Free Recall, Recall (Learning), Recognition (Learning), Reconstruction (Learning)] 11444
- Reticular Formation** 11627, 11697, 11715
- Retina** [See Also Cones (Eye)] 11527, 11605
- Retinal Image** 11375, 11378, 11384, 11629
- Retinal Vessels** [See Arteries (Anatomy)]
- Retirement** 11910, 12076, 13160
- Retroactive Inhibition** 11365, 11468, 11537
- Review (of Literature)** [See Literature Review]
- Rewards** [See Also Monetary Rewards] 11522, 11905, 11940, 12269, 12474, 13273
- Rheumatism** [See Arthritis]
- Rigidity (Muscles)** [See Muscle Contractions]
- Rigidity (Personality)** 11302, 11426
- Risk Taking** 11499, 11947, 12115, 12238, 12253, 12316, 13062
- Ritalin** [See Methylphenidate]
- Rites (Religion)** [See Religious Practices]
- Rites of Passage** [See Also Initiation Rites] 12070
- Rituals (Religion)** [See Religious Practices]
- Rod And Frame Test** 13640
- Rodents** [See Also Gerbils, Guinea Pigs, Hamsters, Mice, Rats, Squirrels] 11592, 11735, 13735
- Rokeach Dogmatism Scale** 13682
- Role (Counselor)** [See Counselor Role]
- Role Expectations** 12124, 12902, 12972, 13087, 13379
- Role Perception** 12120, 12124, 12139, 12919, 12978, 12999, 13006, 13008, 13015, 13017, 13019, 13040, 13041, 13262, 13379, 13647, 13669
- Role Playing** 12195, 12218, 12713, 13170, 13274, 13345, 13630
- Roles** [See Also Parental Role, Sex Roles] 11235, 12086, 12130, 12378, 12675, 12818
- Roman Catholicism** 12100, 12106, 13144
- Rorschach Test** 12061, 12310, 12377, 13479
- Rotary Pursuit** 11364
- RT (Response)** [See Reaction Time]
- Rural Environments** 11954, 12062, 12082, 12085, 12383, 13064, 13292, 13338, 13504, 13539, 13654
- Saccharin** 11565, 11805
- Safety** 12686
- Salaries** 13637, 13638, 13668, 13730
- Sales Personnel** 13429, 13664, 13673, 13674
- Sallience (Stimulus)** [See Stimulus Saliency]
- Salivation** 11673
- Saltiness** [See Taste Stimulation]
- Sampling (Experimental)** 11247, 11268, 11337
- Satiation** 11551, 11645, 11702, 11822
- Satisfaction** [See Also Job Satisfaction, Need Satisfaction] 11910, 12093, 13574
- Scales (Attitude)** [See Attitude Measures]
- Scales (Intelligence)** [See Intelligence Measures]
- Scales (Personality)** [See Personality Measures]
- Scales (Rating)** [See Rating Scales]
- Scaling (Testing)** 13678
- Scalp (Anatomy)** 11622, 11683
- Scalp Disorders** [See Skin Disorders]
- Schedules (Learning)** [See Learning Schedules]
- Schedules (Reinforcement)** [See Reinforcement Schedules]
- Scheduling (Work)** [See Work Scheduling]
- Schizophrenia** [See Also Acute Schizophrenia, Childhood Schizophrenia, Chronic Schizophrenia, Hebephrenic

BRIEF SUBJECT INDEX

Schizophrenia, Paranoid Schizophrenia] 11612, 11855, 12364, 12365, 12372, 12373, 12383, 12386, 12387, 12388, 12389, 12393, 12394, 12395, 12396, 12399, 12401, 12410, 12412, 12418, 12420, 12424, 12427, 12430, 12432, 12447, 12448, 12624, 12785
Scholarships [See Educational Financial Assistance]
Scholastic Achievement [See Academic Achievement]
Scholastic Aptitude [See Academic Aptitude]
School Achievement [See Academic Achievement]
School Adjustment 13199, 13326, 13359, 13401, 13621
School Administration [See Educational Administration]
School Administrators [See Also School Principals, School Superintendents] 12946, 12956, 12978, 12993, 12996, 13010, 13011, 13030, 13042, 13047, 13051, 13063, 13064, 13074, 13078, 13079, 13121, 13379, 13401, 13403, 13553, 13566
School Age Children 11295, 11304, 11311, 11316, 11360, 11411, 11428, 11440, 11445, 11449, 11453, 11464, 11475, 11478, 11501, 11505, 11512, 11618, 11663, 11764, 11834, 11849, 11859, 11862, 11864, 11872, 11875, 11876, 11880, 11894, 11896, 11901, 11907, 11911, 11913, 11914, 11918, 11919, 11920, 11921, 11922, 11923, 11925, 11929, 11932, 11933, 11936, 11937, 11938, 11939, 11948, 11950, 11952, 11954, 11955, 11957, 11958, 11960, 11961, 11962, 11964, 11965, 11966, 11968, 11969, 11973, 11975, 11979, 11980, 11985, 11990, 11993, 11994, 11996, 11998, 12001, 12004, 12005, 12007, 12009, 12011, 12012, 12014, 12021, 12023, 12026, 12027, 12030, 12032, 12033, 12038, 12085, 12115, 12128, 12164, 12166, 12188, 12195, 12203, 12262, 12282, 12297, 12316, 12320, 12330, 12368, 12435, 12450, 12502, 12504, 12508, 12510, 12512, 12526, 12527, 12528, 12533, 12538, 12541, 12548, 12567, 12581, 12682, 12695, 12700, 12711, 12715, 12725, 12740, 12746, 13046, 13156, 13258, 13307, 13321, 13324, 13331, 13478, 13491, 13493, 13502, 13512, 13525, 13550, 13577, 13583, 13588
School Attendance 12178, 13314, 13333, 13552, 13595
School Counselors 12887, 12971, 12999, 13005, 13006, 13401, 13402, 13537, 13553, 13556, 13566, 13615
School Dropouts 13249, 13356, 13363, 13595
School Enrollment [See Also School Attendance] 13373, 13394
School Environment 12290, 12952, 12960, 12963, 12964, 13015, 13055, 13059, 13101, 13246, 13322, 13367, 13369, 13393, 13437, 13469
School Facilities [See Dormitories, Educational Laboratories, Learning Centers (Educational)]
School Federal Aid [See Educational Financial Assistance]
School Financial Assistance [See Educational Financial Assistance]

School Integration (Racial) 12032, 12064, 12149, 13365, 13367
School Learning 12936, 13027, 13101, 13167, 13202, 13219, 13260, 13274, 13288, 13289, 13493
School Organization [See Educational Administration]
School Phobia 12345, 12715
School Principals 12975, 12999, 13007, 13015, 13017, 13019, 13021, 13047, 13059, 13079, 13089, 13095, 13402
School Psychologists 13008, 13017, 13619
School Psychology 12944
School Readiness 11321, 11947, 12965, 13171, 13218, 13251, 13310, 13400, 13569
School Superintendents 12973, 12999, 13059
Schools [See Also Colleges, Elementary Schools, High Schools, Kindergartens, Nongraded Schools, Technical Schools] 12484, 12949, 13459
Science (Social) [See Social Sciences]
Science Education 12961, 13036, 13057, 13103, 13129, 13132, 13158, 13192, 13211, 13254, 13262, 13268, 13280, 13289, 13330, 13344, 13350, 13352, 13408, 13411
Sciences [See Also Anthropology, Biochemistry, Chemistry, Child Psychiatry, Child Psychology, Clinical Psychology, Community Psychiatry, Community Psychology, Comparative Psychology, Counseling Psychology, Developmental Psychology, Epidemiology, Geography, Immunology, Medical Psychology, Neuroanatomy, Neurochemistry, Neurology, Neuropsychology, Neuropsychiatry, Physics, Psychiatry, Psychology, Psychopathology, School Psychology, Social Psychology, Social Sciences, Sociology, Surgery] 11237, 13382
Scientific Communication [See Also Professional Meetings And Symposia, Psychological Terminology] 12873, 12905, 12922
Scientific Methods [See Experimental Methods]
Scopolamine 11692, 11759, 11760, 11785, 11789, 11803
Scopolamine Hydrobromide [See Scopolamine]
Scores (Test) [See Test Scores]
Scoring (Testing) 11274, 11276, 11279, 11297, 11300, 11308, 12377, 13543, 13572, 13622
Scotland 11973
Scotopic Stimulation 11533
Screening (Job Applicants) [See Job Applicant Screening]
Seasonal Variations 12399
Secondary Education 13022, 13043, 13121, 13567
Secondary Reinforcement 11563, 12845, 13141, 13166, 13241, 13485
Secretarial Skills [See Clerical Secretarial Skills]
Secretion (Gland) [See Lactation, Salivation]
Sectioning (Lesion) [See Lesions]
Sedatives [See Chlorpromazine, Haloperidol, Methaqualone, Pentobarbital, Phenobarbital, Reserpine, Scopolamine]
Segregation (Racial) [See Racial Integration]
Seizures [See Convulsions]

Selection (Personnel) [See Personnel Selection]
Selective Attention 11392, 11515, 11950

- Special Education (Aurally Handicap)** [See Aurally Handicapped, Special Education]
- Special Education (Emot Disturbed)** [See Emotionally Disturbed, Special Education]
- Special Education (Gifted)** [See Gifted, Special Education]
- Special Education (Learning Disabil)** [See Learning Disabilities, Special Education]
- Special Education (Mentally Retard)** [See Mentally Retarded, Special Education]
- Special Education (Phys Handicaps)** [See Physically Handicapped, Special Education]
- Special Education (Visual Handicap)** [See Special Education, Visually Handicapped]
- Special Education Students** 11826, 13094, 13463, 13475, 13511, 13517
- Special Education Teachers** 13008, 13034, 13041, 13081, 13476, 13484, 13487, 13489, 13511
- Specialization (Academic)** [See Academic Specialization]
- Spectral Sensitivity** [See Color Perception]
- Speech** [See Verbal Communication]
- Speech And Hearing Measures** [See Also Wepman Test of Auditory Discrim] 12539
- Speech Characteristics** [See Also Articulation (Speech), Pronunciation, Speech Pauses, Speech Pitch, Speech Rate, Speech Rhythm] 11400, 11404, 11405, 11833, 11847, 11848, 11849, 11888, 11937, 12186
- Speech Development** 11906, 11909, 11934, 11946, 11956, 11989
- Speech Disorders** [See Also Articulation Disorders, Stuttering] 12503, 12529, 12530
- Speech Measures** [See Speech And Hearing Measures]
- Speech Pauses** 11981
- Speech Perception** 11246, 11400, 11403, 11404, 11405, 11407, 11408, 11412, 11897, 11946, 11954, 12535, 12537, 12587, 13303
- Speech Pitch** 11937, 12247
- Speech Processing (Mechanical)** [See Compressed Speech]
- Speech Rate** 11981
- Speech Rhythm** 11887
- Speech Therapy** 11909, 12529, 12638, 12736, 12737, 12738, 12739, 12740
- Speed** [See Velocity]
- Speed (Response)** [See Reaction Time]
- Spelling** 11453, 13145
- Spiders** [See Arachnida]
- Spinal Cord** 11621, 11725, 11753
- Spinal Cord Injuries** 12563, 12788
- Spinal Fluid** [See Cerebrospinal Fluid]
- Spokane Indians** [See American Indians]
- Spontaneous Abortion** 12347
- Spontaneous Remission** 12629
- Sports** [See Also Basketball, Football, Swimming] 11347, 12478, 13177, 13267
- Spouses** [See Also Housewives] 12059, 12119, 12124, 12141, 12171, 12663, 12670, 12696, 12810
- Spreading Depression** 11686
- Squirrels** 11647, 11751
- Stability (Emotional)** [See Emotional Stability]
- Standardization (Test)** [See Test Standardization]

BRIEF SUBJECT INDEX

- Standards (Professional)** [See Professional Standards]
- Stanford Binet Intelligence Scale** 12002
- Starfish** [See Echinodermata]
- Startle Reflex** 11340, 11644
- Starvation** 11880
- State Hospitals** [See Psychiatric Hospitals]
- Statistical Analysis** [See Also Analysis of Covariance, Analysis of Variance, Cluster Analysis, F Test, Factor Analysis, Predictability (Measurement), Statistical Measurement] 11333, 11337, 11645, 12050, 13295, 13585
- Statistical Correlation** 11292, 11301, 11327, 11332
- Statistical Measurement** [See Also Analysis of Covariance, Analysis of Variance, Cluster Analysis, Factor Analysis, Predictability (Measurement)] 11333
- Statistical Reliability** 11264
- Statistical Tests** [See F Test]
- Statistical Validity** [See Also Predictive Validity] 11319
- Statistical Variables** 11284, 11328
- Status** 11420, 11836, 12075, 12081, 12093, 12148, 12156, 12254, 12267, 12630, 13554
- Stereopsis** [See Stereoscopic Vision]
- Stereoscopic Vision** 11377
- Stereotaxic Atlas** 11718
- Stereotaxic Techniques** [See Also Brain Stimulation, Chemical Brain Stimulation, Electrical Brain Stimulation, Spreading Depression] 11717
- Stereotyped Attitudes** 11460, 11846, 12057, 12069, 12073, 12156, 12158, 12159, 12162, 12166, 12167, 12169, 12171, 12249, 12273, 12275, 12853, 12873, 12886, 12934, 12971, 13208, 13223, 13306, 13426
- Stereotyped Behavior** 12164, 13411, 13411
- Sterilization (Sex)** [See Castration, Male Castration, Ovariectomy, Vasectomy]
- Steroids** [See Also Hydrocortisone] 11700, 11788
- Stimulation** [See Afferent Stimulation, Auditory Stimulation, Aversive Stimulation, Brain Stimulation, Chemical Brain Stimulation, Electrical Brain Stimulation, Perceptual Stimulation, Prismatic Stimulation, Self Stimulation, Somesthetic Stimulation, Spreading Depression, Tactile Stimulation, Taste Stimulation, Visual Stimulation]
- Stimulus (Unconditioned)** [See Unconditioned Stimulus]
- Stimulus Attenuation** 11251
- Stimulus Change** 11537, 11648
- Stimulus Complexity** 11356, 11377, 11397, 11428, 11485, 11532, 11639, 11861, 11915, 11936, 11969, 12037
- Stimulus Control** 11269, 11561, 11614
- Stimulus Deprivation** [See Food Deprivation, Sensory Deprivation, Social Isolation, Water Deprivation]
- Stimulus Discrimination** 11478, 11555, 11561, 11569, 11575, 11581, 11684, 11747, 11784, 11786, 12212
- Stimulus Duration** 11346, 11347, 11363, 11374, 11397, 11409, 11461, 11561, 11613, 12364, 12535, 13739
- Stimulus Exposure Time** [See Stimulus Duration]
- Stimulus Frequency** 11346, 11383, 11393, 11399, 11613
- Stimulus Generalization** 11526, 11543, 11555, 12505
- Stimulus Intensity** 11269, 11352, 11527, 11644, 11654, 11688, 12480
- Stimulus Intervals** [See Interstimulus Interval, Intertrial Interval]
- Stimulus Novelty** 11508, 11789, 11905, 12034, 12037, 13319
- Stimulus Parameters** [See Also Interstimulus Interval, Intertrial Interval, Stimulus Attenuation, Stimulus Complexity, Stimulus Duration, Stimulus Frequency, Stimulus Intensity, Stimulus Novelty, Stimulus Salience, Stimulus Similarity, Stimulus Variability] 11581
- Stimulus Pattern** [See Stimulus Variability]
- Stimulus Presentation Methods** 11267, 11381, 11396, 11401, 11406, 11407, 11440, 11441, 11453, 11469, 11480, 11581, 11966, 12258, 13118, 13317, 13483
- Stimulus Salience** 11440
- Stimulus Similarity** 11285, 11457, 11461, 11475, 12587
- Stimulus Variability** 11345, 11377, 11413, 11936
- Stipends** [See Educational Financial Assistance]
- Stochastic Modeling** 13699
- Strain Differences (Animal)** [See Animal Breeding, Genetics]
- Strategies** 11431, 11437, 11468, 11886, 12264, 12514, 13118, 13130, 13329, 13347, 13388
- Strength (Physical)** [See Physical Strength]
- Stress** [See Also Environmental Stress, Physiological Stress, Psychological Stress, Stress Reactions] 11646, 11781, 12003, 12351, 12377, 12380
- Stress Reactions** 11673, 12401
- Stroboscopic Movement** [See Apparent Movement]
- Stroke (Cerebrum)** [See Cerebrovascular Accidents]
- Strong Vocational Interest Blank** 13527, 13571
- Structuralism** 12592
- Strychnine** 11780
- Student Activism** 12169
- Student Admission Criteria** 13373, 13435, 13594
- Student Attitudes** 11293, 11310, 12100, 12183, 12243, 12285, 12484, 12888, 12891, 12933, 12940, 12942, 12954, 12956, 12959, 12960, 12970, 13036, 13039, 13049, 13055, 13057, 13075, 13091, 13092, 13105, 13113, 13124, 13125, 13137, 13138, 13147, 13153, 13158, 13160, 13161, 13167, 13168, 13172, 13184, 13186, 13189, 13191, 13208, 13216, 13217, 13226, 13233, 13235, 13240, 13243, 13244, 13245, 13252, 13253, 13255, 13271, 13279, 13305, 13306, 13330, 13355, 13358, 13359, 13360, 13362, 13365, 13369, 13370, 13379, 13380, 13384, 13389, 13391, 13393, 13394, 13399, 13401, 13402, 13403, 13405, 13406, 13409, 13413, 13414, 13415, 13418, 13419, 13421, 13423, 13424, 13425, 13427, 13429, 13435, 13438, 13443, 13444, 13447, 13448, 13450, 13451, 13453, 13457, 13458, 13482, 13495, 13519, 13535, 13544, 13587, 13593, 13596, 13602, 13605, 13609, 13615, 13616, 13663
- Student Protest** [See Student Activism]
- Student Teachers** 12969, 12970, 12979, 12985, 12995, 12997, 13004, 13018, 13024, 13035, 13049, 13069, 13069, 13085, 13383, 13406

BRIEF SUBJECT INDEX

- Surveys 12084
 Surveys (Opinion) [See Attitude Measures]
 Surveys (Personality) [See Personality Measures]
 Suspicion 12222
 Sweden 12351, 12924, 12950, 13037
 Sweetness [See Taste Stimulation]
 Swimming 11347
 Switzerland 12905
 Syllogistic Reasoning [See Inductive Deductive Reasoning]
 Symbolism 11828, 12441
 Sympathetic Nervous System 11265
 Sympatholytic Drugs [See Reserpine]
 Sympathomimetic Amines [See Amphetamine, Catecholamines, Dextroamphetamine, Dopamine, Epinephrine, Norepinephrine]
 Sympathomimetic Drugs [See Also Amphetamine, Catecholamines, Dextroamphetamine, Dopamine, Epinephrine, Fenfluramine, Isoproterenol, Norepinephrine] 11691, 12722
 Sympathy 12235
 Symposia [See Professional Meetings And Symposia]
 Symptoms [See Also Acting Out, Anorexia Nervosa, Anoxia, Convulsions, Depersonalization, Fatigue, Hematoma, Hyperkinesia, Hyperphagia, Hypothermia, Obesity, Pain, Psychogenic Pain, Restlessness, Shock] 11696, 12356, 12425, 12430, 12431, 12432, 12540, 12545, 12604, 12605, 12606
 Synapses 11606
 Syndromes [See Also Alcoholic Psychosis, Delirium Tremens, Downs Syndrome, Korsakoff's Psychosis, Presenile Dementia, Senile Dementia, Toxic Psychoses] 11621, 12568, 12583
 Syntax [See Also Sentence Structure] 11443, 11494, 11838, 11850, 11938, 11951, 11955, 11984, 11997, 12528, 13153, 13513
 Systematic Desensitization Therapy 12683, 12692, 12694, 12703, 12705, 12707, 12713, 12839, 13546, 13560
 T Groups [See Sensitivity Training]
 Tactual Discrimination [See Tactual Perception]
 Tactual Perception [See Also Vibrotactile Thresholds] 11355, 11368, 11731, 13193, 13467
 Tactual Stimulation 11355, 11628, 11633, 11978, 12000
 Talent [See Ability]
 Talented [See Gifted]
 Tape Recorders 11271
 Task Analysis 13697
 Task Complexity 11469, 11491, 11817, 13460
 Task Difficulty [See Task Complexity]
 Taste Discrimination [See Taste Perception]
 Taste Perception 11352, 11596, 11696, 11783, 11818, 12491
 Taste Stimulation 11352
 Taxonomies 11342, 12804, 12957, 13562, 13585, 13629
 Taylor Manifest Anxiety Scale 13623
 Tea (Drug) [See Caffeine]
 Teacher (Evaluation of) [See Personnel Evaluation, Teachers]
 Teacher Aides 12819
 Teacher Attitudes 12933, 12942, 12952, 12956, 12959, 12960, 12969, 12970, 12971, 12980, 12981, 12986, 12987, 12990, 12991, 12992, 12996, 13000, 13001, 13004, 13007, 13019, 13024, 13025, 13028, 13032, 13043, 13053, 13055, 13057, 13058, 13063, 13069, 13070, 13072, 13075, 13077, 13079, 13085, 13090, 13098, 13105, 13184, 13205, 13244, 13253, 13281, 13369, 13380, 13381, 13390, 13397, 13399, 13400, 13403, 13423, 13425, 13445, 13449, 13450, 13457, 13476, 13483, 13484, 13489, 13490, 13505, 13511, 13557, 13587
 Teacher Characteristics [See Also Teacher Attitudes, Teacher Personality] 12006, 12949, 12970, 12980, 12981, 12984, 13000, 13003, 13018, 13020, 13029, 13038, 13039, 13046, 13053, 13054, 13059, 13070, 13072, 13075, 13086, 13091, 13180, 13200, 13242, 13262, 13350, 13354, 13364, 13366, 13371, 13384, 13387, 13392, 13414, 13423, 13425, 13432, 13438, 13444, 13446, 13505, 13509, 13597, 13609
 Teacher Education [See Also Inservice Teacher Education, Student Teaching] 12969, 12977, 12979, 12981, 12982, 12985, 12989, 12995, 12996, 12997, 13002, 13003, 13004, 13009, 13023, 13024, 13031, 13032, 13034, 13035, 13037, 13044, 13048, 13049, 13060, 13065, 13066, 13067, 13069, 13080, 13081, 13084, 13085, 13088, 13090, 13092, 13368, 13453, 13454, 13509, 13521, 13527
 Teacher Effectiveness [See Teacher Characteristics]
 Teacher Personality 12986, 12989, 13033, 13069, 13070, 13071, 13077, 13085, 13098, 13297, 13350, 13354, 13361, 13371
 Teacher Recruitment 13059
 Teacher Student Interaction 12006, 12024, 12856, 12948, 12960, 12979, 12981, 12982, 12984, 12985, 12991, 12998, 13000, 13001, 13003, 13018, 13029, 13046, 13066, 13067, 13071, 13116, 13134, 13200, 13364, 13367, 13372, 13383, 13390, 13392, 13395, 13397, 13403, 13414, 13420, 13422, 13423, 13434, 13441, 13452, 13455, 13457, 13461, 13476, 13556, 13588
 Teacher Tenure 13072, 13366
 Teacher Training [See Teacher Education]
 Teachers [See Also College Teachers, Elementary School Teachers, High School Teachers, Junior High School Teachers, Special Education Teachers, Student Teachers] 12171, 12876, 12946, 12966, 12990, 13016, 13019, 13020, 13046, 13059, 13077, 13091, 13092, 13180, 13362, 13400, 13423, 13425, 13434, 13442, 13446, 13609, 13729

 Word Deafness [See Aphasia]
 Word Frequency 11388, 11456, 11853, 13308
 Word Meaning 11424, 11429, 11453, 11510, 11674, 11837, 12304, 12388, 12527, 13148, 13237
 Words (Form Classes) [See Form Classes (Language)]
 Words (Phonetic Units) 11415, 11428, 11430, 11441, 11453, 11457, 11480, 11488, 11847, 11853, 11951, 13251, 13303, 13308
 Words (Vocabulary) [See Vocabulary]

Work (Attitudes Toward) 11286, 11315, 12078, 13236, 13377, 13435, 13636, 13714
 Work Environments [See Working Conditions]
 Work Scheduling 13685, 13694
 Work Study Programs [See Educational Programs]
 Workers [See Personnel]
 Working Conditions [See Also Noise Levels (Work Areas)] 12104, 13685, 13721, 13732
 Worship [See Religious Practices]
 Writing (Creative) [See Literature]
 Writing (Handwriting) [See Handwriting]
 Written Language [See Also Alphabet]
 Handwriting Letters Alphabetical Order, Numbers (Numerical) 11424, 11444, 11850, 11917, 13137
 Wryneck [See Torticollis]

Yoga 12283
 Young Adults 11347, 11616, 11651, 11663, 11680, 11869, 11915, 11977, 11999, 12001, 12072, 12106, 12116, 12153, 12164, 12262, 12440, 12443, 12788
 Youth (Adolescents) [See Adolescents]
 Youth (Adults) [See Young Adults]
 Youth (Children) [See Children]
 Yugoslavia 12599, 12830

Zen Buddhism 12283

AUTHOR INDEX

The Author Index is intended to be a name index only and not a person index. "Adams, P." will be listed separately from "Adams, Paul" even though the names may refer to the same person; however, two listings for "Adams, P." may refer to two different authors. All authors are listed, not just primary authors.

American Psychological Association

**1200 Seventeenth St., N.W.
Washington, D.C. 20036**

Did you know . . .

PsycINFO data base. The PsycINFO data base contains summaries of the world's literature in psychology and related disciplines announced in the *Psychological Abstracts* journal from 1967 to the present. Currently over 200,000 records are contained in the data base which represent original contributions to the field of psychology published in journals, books, technical reports, and monographs.

PATELL (Psychological Abstracts Tape Editions Lease or License). Provides tapes on a lease or license basis to institutions offering search services in the behavioral sciences. Back files to 1967 may be obtained for retrospective searches; the current year is provided monthly and contains all abstracts published in the journal as well as their associated index terms and phrases. **PATELL** subscriber institutions are located in Europe, South Africa, Canada, and the United States. One of these institutional subscribers is **Lockheed Information Systems**.

The on-line, interactive computer search services available to information centers, libraries and other users from Lockheed Information Systems is the outgrowth of a research and development program started by the Lockheed Palo Alto Research Laboratory more than a decade ago. Lockheed Information Systems was then established to generate new knowledge and practical operations for increased information handling requirements, including the "information explosion" of literature. The **DIALOG**® Information Retrieval Service was announced in early 1972, providing on-line interactive access to terminals in any subscriber's office and has since expanded to offer a variety of information services.

DIALOG data bases cover a wide range of subject areas in addition to the *Psychological Abstracts* data base. Other areas include Science, Technology/Engineering, Social Sciences, and Business/Economics. All present data bases are regularly updated to include the most recent information and additional data bases are being added.

Special Features:

☐ **Selective Dissemination of Information (SDI)**—Activated automatically in several data bases.

☐ **Full Text Searching**—In addition to searching descriptors, **DIALOG** can also search text (e.g., title and abstract) for any word or phrase.

☐ **Search-Save™**—permits the storage of search strategies for (1) later execution in either another data base or at a later time for current awareness purposes, or (2) at a later

time if the concept developed by the search strategy will be used again and again in combination with other concepts.

☐ **DIALIST™**—Microfiche copies of the **DIALOG** subject indexes to aid the searcher in developing search strategies and in comparing data base content. **DIALIST** collections are available in two versions: (1) a full vocabulary version, and (2) a version from which single-posted terms have been deleted. The full version contains all descriptors, identifiers, and individual full-text terms.

DIALOG users in the US and Canada may use several data communications network services; network service is available from Europe as well. Users may also dial directly to the **DIALOG** computer in Palo Alto, CA, or utilize such services as outward WATS or FTS, where the user bears the communications charges. Many users already have a **DIALOG**-compatible terminal in their organization. Operation speeds of 10, 15, 30, or 120 characters per second are compatible with the **DIALOG** service.

Training sessions are held for beginning or advanced users at Lockheed locations in Palo Alto, CA, Los Angeles, CA, New York, NY; Washington, DC; or Chicago, IL, or training sessions may be held at the users' facility.

To obtain more information on **DIALOG**, call or write:

Lockheed Information Systems
Code 5020/201
3251 Hanover Street
